Certification

I, Matthew O'Neil, am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Interim Remedial Measure Work Plan was implemented and that all construction activities were completed in substantial conformance with the Department-approved Interim Remedial Measure Work Plan.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

1. Background and Site Description

1.1. Background

This Interim Remedial Measure (IRM) Construction Completion Report (CCR) presents a summary of the remedial activities completed by National Grid during September 2024 through December 2024 at Operable Unit No. 4 (OU-4) of the former Bay Shore/Brightwaters Manufactured Gas Plant (MGP) Site located in Bay Shore, New York (Figure 1). This IRM is one portion of the overall environmental improvements being implemented at the Bay Shore/Brightwaters Manufactured Gas Plant (MGP) Site in conformance with the Administrative Order on Consent (AOC) Index No. DI-0001-98-11 with the New York State Department of Environmental Conservation (NYSDEC). This effort was performed under the approval and oversight of the NYSDEC and in accordance with the NYSDEC and New York State Department of Health (NYSDOH)-approved *Operable Unit No. 4 – 22 Oak Street Excavation, IRM Work Plan, Bayshore/Brightwaters, Former MGP Site dated June 2023* (IRMWP). The IRM was implemented in accordance with the NYSDEC Department of Environmental Remediation *(DER)-10 Technical Guidance for Site Investigation and Remediation,* dated May 3, 2010.

The IRM activity at the focus of this CCR is located within OU-4, primarily at 22 Oak Street (hereinafter referred to as the Site). A Site map is provided on Figure 2.

The work for this IRM consisted of a single phase and included the excavation, removal, and offsite disposal of MGP-related impacted surface and subsurface soils.

1.2. Site Description and Operable Units

The Bay Shore Former MGP Site is located near the south shore of Long Island, approximately 6,000 feet north of the Great South Bay. The Site is currently divided into four OUs (Figure 1). OU-1 consists of the former MGP main operations area and the parcels immediately downgradient and to the west of the main operations area. OU-2 includes the groundwater plume extending south of OU-1. OU-3 is located west of OU-1 and includes the Brightwaters Yard and the associated downgradient groundwater plume. OU-4 is located approximately 350 feet east of OU-1 and includes the former cesspool and pond area and the downgradient Watchogue Creek/Crum's Brook.

The IRM activity at the focus of this CCR was primarily performed at 22 Oak Street within OU-4, as shown on Figure 2.

The 22 Oak Street IRM area consists of portions of the 22 Oak Street property, portions of the Oak Street right-of-way (ROW), and portions of the Town of Islip (TOI) commuter parking lot for the Long Island Railroad (LIRR) Montauk Line Bay Shore Station. The 22 Oak Street parcel is a former oil terminal (the former Standard Oil Distribution Station) and was used for office space, and miscellaneous indoor and outdoor storage until September 2024. The parcel is currently planned to be redeveloped for mixed residential/commercial purposes. The 22 Oak Street IRM area is bounded by residential properties to the north, industrial/commercial properties to the west and east, and the LIRR to the south.

1.3. Site Geology and Hydrology

The shallow stratigraphy beneath the Site is fill, glacial outwash deposits, and the Magothy Formation, in descending order. The fill thickness ranges from about two to six feet and consists primarily of sand and gravel with some urban debris.

The glacial outwash deposits vary in thickness from about 65 to 70 feet. These deposits consist of yellow-brown to orange, medium to coarse sand with small amounts of silt and fine to coarse gravel. Gravel lenses were encountered primarily within 20 feet below ground surface (ft bgs).

The Magothy Formation consists of light gray to black fine sand, silt, and clay ranging from hard to slightly plastic in texture. This formation was not encountered during these IRM activities because the formation is 71 to 74 ft bgs (-52 to -55 feet above mean sea level [ft msl]), and most cell excavations were less than 20 ft bgs.

The average depth to groundwater ranges from two to six ft bgs in the vicinity of the 22 Oak Street IRM Excavation. Groundwater at the Site flows to the south-southeast. Based on the water level data collected during the Remedial Investigation (RI) in 2002, there is a slight upward gradient in the vertical head distribution between the deep and shallow monitoring well clusters WCMW-01 and WCMW-02. The deep wells have greater static heads than the shallow wells with differences of 0.07 and 0.06 feet, respectively, indicating a possible area of groundwater discharge.

1.4. Site History

The Bay Shore MGP began operations in the late 1880s. The plant was operated by Mutual Gas and Light Company, the Suffolk Gas and Electric Light Company, and later, the Long Island Lighting Company (LILCO) in 1918. LILCO operated the plant from 1918 to approximately 1973 when most of the facilities were demolished. In 1998, KeySpan Corporation acquired the former MGP property through a merger of LILCO and the Brooklyn Union Gas Company. In 2007, National Grid acquired the former MGP property through the acquisition of KeySpan Corporation.

A more detailed summary of the operating history of the Bay Shore Former MGP Site is included in the RI reports that have been prepared for the Former MGP Site. These reports are titled *Bay Shore/Brightwaters Former Manufactured Gas Plant Site, Remedial Investigation Report, Bay Shore, New York* dated April 2002 (Dvirka and Bartilucci [D&B], 2002) and *Bay Shore/Brightwaters Former Manufactured Gas Plant Site, Final Remedial Investigation Report, Bay Shore, New York* dated January 2003 (D&B, 2003).

1.4.1. Cesspool Area (22 Oak Street)

As stated above, OU-4 is located approximately 350 feet east of the main portion of the Bay Shore former MGP Site. During part of its operational history, the Bay Shore former MGP discharged stormwater drainage and treated process wastewater from a skimming basin overflow through a pipe that ran east along Oak Street. This pipe was cut and capped at the MGP property line in 1999. The pipe

initially may have discharged to the former location of Watchogue Creek near the intersection of Oak Street and Center Avenue. Between 1890 and 1909, the creek was filled in and the discharge pipe was routed to two cesspools installed at the former creek location. The cesspools were located near the northwestern corner of the LIRR parking lot adjacent to the northeastern corner of an inactive oil terminal (the former Standard Oil Distribution Station – 22 Oak Street property). The former discharge pipe along Oak Street, the cesspools, and the adjacent impacted soils located between and including Oak Street and the LIRR tracks is herein referred to as the "Cesspool Area."

1.4.2. Previous Site Investigations

Several rounds of environmental investigation activities have been completed at OU-4 of the Bay Shore Former MGP Site to determine the extent of MGP-related impacts. The results of these investigations are provided in the following reports.

- *Remedial Investigation Report,* prepared by Dvirka and Bartilucci, dated April 2002.
- *Final Remedial Investigation Report*, prepared by Dvirka and Bartilucci, dated January 2003.
- *Pre-Interim Remedial Measure Investigation Report, 22 Oak Street Parcel Adjacent to OU-4 – Cesspool Area, Bay Shore Former MGP Site, Bay Shore New York,* prepared by GEI Consultants, Inc., September 2003.
- *Soil Background Analysis – Statistical Approaches and Application to the Interim Remedial Measure,* prepared by GEI Consultants, Inc., dated January 2005.
- *Bay Shore/Brightwaters Former MGP Site Upgradient OU-4 Cesspool Area Additional Delineation Sampling Results and proposed Remedial Approach,* Letter from National Grid to NYSDEC dated September 28, 2009.
- *Bay Shore Former MGP Site OU-4 Upgradient Cesspool Area Excavation IRM Work Plan and Design Addendum Soil Boring Delineation Results and Proposed Revised Excavation Extent,* Letter from National Grid to NYSDEC dated April 21, 2010.
- Draft Cesspool Area S-ISCO™IRM Post S-ISCO™ Soil and Groundwater Data Deliverable, OU-4 Bay Shore/Brightwaters Former MGP Site, prepared by GEI, dated June 30, 2010.
- *Bay Shore/Brightwaters Former MGP Site 22 Oak Street Pre-Design Investigation Phase I PDI Results Summary and Phase II PDI Recommendations*, Letter from National Grid to NYSDEC dated November 18, 2022.
- *Bay Shore/Brightwaters Former MGP Site 22 Oak Street Pre-Design Investigation Phase II PDI Results Summary and Recommendations*, Letter from National Grid to NYSDEC dated October 10, 2024.

1.4.3. Previous IRMs

Several IRMs have been previously performed at the Site as discussed above. The details of these IRM activities are provided in the following reports.

- **2000 – Watchogue Creek/Crum's Brook Restoration IRM:** Surficial impacts identified in Watchogue Creek/Crum's Brook south of the Pond Area, between Union Boulevard and Mechanicville Road, were remediated and restoration was completed in 2000. The details of this IRM and the restoration are provided in the *Final Summary Report for Crum's Brook Restoration, Area C Interim Remedial Measure*, prepared by Foster Wheeler, dated November 2002, and the *OU-4 Watchogue Creek/Crum's Brook Post Interim Remedial Measures Analytical Results and Final Conditions Report*, Letter from National Grid to NYSDEC dated September 7, 2012.
- **2005 – OU-4 Cesspool Excavation IRM**: The removal of significant sources of MGP-related impacts in the vicinity of the former cesspool and associated structures on the 22 Oak Street and TOI properties and the discharge pipe that ran along Oak Street from 5th Avenue was completed in November 2005. The depth of this excavation ranged from 4 to 6.5 ft bgs.
- **2009 – OU-4 Surfactant-Enhanced In-Situ Chemical Oxidation (S-ISCO) Application:** S-ISCO injections were implemented in 2009 to address the deeper and inaccessible residual impacts remaining in the Cesspool Area. The S-ISCO application was performed in accordance with the *Surfactant-Enhanced In-Situ Chemical Oxidation (S-ISCO™) OU-4 Cesspool Area Work Plan (S-ISCO™ Work Plan)*, dated February 2008, prepared by VeruTEK Technologies, Inc. and the associated addendums. The injections were performed from April through December 2009. Post S-ISCO soil and groundwater sampling was performed in the spring of 2010 to evaluate the effectiveness of the S-ISCO treatment. The results of the post S-ISCO soil and groundwater sampling in OU-4 are provided in *the Draft Cesspool Area S-ISCO IRM Post S-ISCO Soil and Groundwater Data Deliverable, OU-4 Bay Shore/Brightwaters Former MGP Site*, prepared by GEI, dated June 30, 2010. A summary of the work performed during the S-ISCO IRM is provided in the *S-ISCO™ Injection Summary Report OU-4 Bay Shore/Brightwaters Former MGP Site*, prepared by XDD LLC, dated June 2012.
- **2011 – OU-4 Cesspool Area and Pond Area Excavation IRM:** Subsequent to the post S-ISCO soil and groundwater sampling, the NYSDEC, in a letter dated November 4, 2010, directed National Grid to excavate areas where MGP-related source material impacts still exist to a depth of 10 ft bgs in the Cesspool Area in order to reduce the risk for direct human exposure to MGP-related source material impacted soils during future subsurface utility work. This IRM was expanded to include the removal of impacts in the OU-4 Upgradient Cesspool Area to meet Unrestricted Use soil clean up objectives (SCOs) and to remove impacts in the OU-4 Pond Area to meet Restricted Residential Use SCOs. Over 15,000 tons of soil was excavated and transported offsite for treatment and disposal.

1.5. CCR Format

This CCR has been prepared to present the remedial construction activities performed by selected contractors during the implementation of the 22 Oak Street IRM. This report is organized into the following sections:

- Section 1 – Background and Site Description
- Section 2 – Summary of IRM
- Section 3 – Description of Remedial Actions Performed
- Section 4 - Conclusions

2. Summary of IRM

2.1. Remedial Action Goal

The NYSDEC remedial program identifies the goal for Site remediation under 6 New York Codes, Rules and Regulations (NYCRR) Sub-Part 375-2.8(a) as:

> "…restore that site to pre-disposal conditions, to the extent feasible. At a minimum, the remedy selected shall eliminate or mitigate all significant threats to the public health and to the environment presented by contaminants disposed at the site through the proper application of scientific and engineering principles and in a manner not inconsistent with the national oil and hazardous substances pollution contingency plan as set forth in section 105 of CERCLA [Comprehensive Environmental Response, Compensation and Liability Act], as amended as by SARA [Superfund Amendments and Reauthorization Act]."

Where restoration to pre-disposal conditions is not feasible, the NYSDEC may approve an alternative criterion based on the Site conditions (6 NYCRR Sub-Part 375-2-8[b][1]). This could include the application of one of the SCOs listed in Table 375-6.8(a) (Unrestricted Use) or Table 375-6.8(b) (Restricted Use). Alternatively, the responsible party may "propose site-specific soil cleanup objectives which are protective of public health and the environment based upon other information."

The remedial goal for the Cesspool Area was defined by the NYSDEC in the November 4, 2010, NYSDEC letter. NYSDEC determined that the soil impacts within the upper 10 feet of material represented a potential future risk for direct human exposure during future underground utility work and should be removed where accessible. In this IRM the excavation was advanced deeper than 10 feet to remove deeper impacted soils.

As defined in DER-10 Standards, Criteria and Guidance (SCGs) are the New York State regulations or statutes that dictate the cleanup standards, standards of control, and other substantive environmental protection requirements, criteria, or limitations that are generally applicable, consistently applied, officially promulgated, and are directly applicable to a remedial action.

The SCGs that apply to this Site are:

- 6 NYCRR Subpart 375-1: General Remedial Program Requirements
- 6 NYCRR§ 375-2: Inactive Hazardous Waste Disposal Site Remedial Program
- 6 NYCRR§ 375-6: Remedial Program SCOs
- Guidance for Evaluating Soil Vapor Intrusion in New York
- DER-10 Technical Guidance for Site Investigation and Remediation
- DER-31 Green Remediation

- NYSDEC CP-51 Soil Cleanup Guidance
- New York State Ambient Water Quality Standards

Site-specific cleanup levels soil at the Site are the SCGs that define the Remedial Action Objectives (RAOs) and to develop the remedial alternatives. The proposed future Site use for the 22 Oak Street property is a multi-story residential apartment building with commercial space and parking on the ground level. The Restricted Use SCOs (RUSCOs) were applied to the 22 Oak Street portion of OU-4 based on the anticipated future Site use.

Similarly, the remedial goals for the IRM (OU-4 Cesspool Area, 22 Oak Street property) described herein were to remove MGP-impacted material via excavation consistent with the RUSCOs. By application of the RUSCOs and given that the conditions identified in DER-10 section 1.12(b)1 have been met, no ongoing Site management, environmental easements or deed restrictions on the property are required.

2.2. Remedial Action Objectives

RAOs are medium-specific or operable-unit specific objectives for the protection of human health and the environment. The media of concern for the Site is soil and groundwater. The medium-specific RAOs for the Site are:

Soil

- Prevent, to the extent practicable, ingestion and direct contact with MGP impacted soils.
- Prevent, to the extent practicable, migration of impacts that would result in groundwater or surface water impacts.
- Prevent inhalation of contaminants by volatilizing from impacted soil.

Groundwater

- Prevent, to the extent practicable, ingestion and direct contact with MGP-impacted groundwater.
- Prevent inhalation of impacts volatilizing from impacted groundwater.

2.3. Description of Selected Remedy

The Site was remediated in accordance with the remedy presented in the NYSDEC-approved January 2023 IRM Work Plan (IRMWP). The original excavation limits presented in the IRMWP were modified based on the results of the Phase II and Phase III Pre-Design Investigation (PDI), as discussed in Section 3.5 of this report.

The IRM included excavation, removal, and offsite disposal of MGP-related impacted surface and subsurface soils within 22 Oak Street and portions of the Town of Islip (TOI) Long Island Railroad (LIRR) parking lot, as described below. The lateral extent of excavation is provided in Figure 2.

All excavation, decontamination, loading, and construction support occurred on Site. Due to the Site constraints, the removal of the soil was completed in stages to allow for the movement and decontamination of equipment, as needed. The 22 Oak Street impacted subsurface soils were removed 15 to 21 ft bgs, shown in Figure 3. The excavation below the water table was performed in-the-wet. Material handling was performed in accordance with Section 3.4.5. The volume of material removed during the 22 Oak Street Excavation IRM was approximately 5,283 tons of soil and 438 cubic yards of concrete.

The existing above ground structures on 22 Oak Street were demolished prior to the IRM. Restoration of the 22 Oak Street property included removal of all sediment fencing, hay bales, restoration of sections of perimeter fencing and installation of a gravel surface to support the overall redevelopment of the property.

The removal of impacted surface and subsurface soil meets the remedial goals and RAOs for the Site. The actual lateral and vertical excavation limits exceeded the limits specified in the IRMWP due to additional information collected during the PDI, observations made in the field, and the means and methods used to implement the excavation.

3. Description of Remedial Actions Performed

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved IRM Work Plan for Operable Unit No. 4 – 22 Oak Street Excavation, Bayshore/Brightwaters, Former MGP Site dated June 2023. All deviations from the IRM Work Plan are summarized in Section 3.8.

3.1. Governing Documents

This CCR section has been prepared to summarize the regulatory compliance and construction documents that were developed to support the implementation of the 22 Oak Street IRM actions.

3.1.1. Site Specific Health & Safety Plan (HASP)

All remedial work performed under this IRM was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal Occupational Safety and Health Administration (OSHA).

GEI Consultants, Inc. (GEI) served as the Site Health and Safety Officer for GEI personnel. National Grid's Contractor, Posillico Inc. (Posillico), was responsible for construction personnel health and safety. Work was performed under the Contractor Site-specific HASP dated March 19, 2024.

Both GEI's and Posillico's Site-specific HASPs were compiled for the IRM work performed at the Site and were maintained on Site.

A total of 3,423 hours were worked during implementation of the OU-4 Excavation IRM, with no OSHA recordable incidents.

3.1.2. Waste Management Plan

During the implementation of remedial construction activities, the Contractor disposed of all waste materials generated from the IRM in accordance with all applicable laws and regulations at National Grid- and NYSDEC-approved disposal facilities. Remediation-derived waste generated during construction activities included excavated impacted soils, non-impacted construction debris, rinse-waters from decontamination procedures, spent personal protective equipment (PPE), incidental water generated during Site activities, and miscellaneous refuse.

Solid, liquid, and hazardous waste treatment/disposal facilities were approved by National Grid and NYSDEC prior to use. Disposal facilities were reviewed by National Grid for permitting and licensing requirements, licenses, and regulatory enforcement status. Prior to generating wastes, National Grid submitted a generator profile of the soils and wastes generated at the Site for approval (Appendix A).

3.1.2.1. Disposal Record Keeping

Manifests and/or bills of lading for all shipments were submitted to the Construction Manager (CM). The manifest form and/or bills of lading were signed by National Grid or an approved agent for National Grid and by the truck driver before the material left the Site, and finally by a representative of disposal facility when the load was received. A copy of the signed manifest was maintained on-file in the administrative trailer of the Contractor by the CM. Upon arrival at the disposal facility, the manifest was signed and a copy returned to the Engineer, complete with all applicable signatures as proof of delivery. The returned manifests were cross-checked and matched with the original copy of the manifest already on file.

A log of all shipments and copies of all manifests and/or bills of lading were maintained by the CM onsite for reference. The shipment logs and manifests and/or bills of lading are provided in Appendix B.

3.1.2.2. Material Shipping Procedures

Waste transporters, properly permitted by the NYSDEC, were used to ship impacted soils to appropriately licensed NYSDEC- and National Grid-approved treatment/disposal facilities. All truck permits were provided to the Engineer/CM prior to the vehicles arriving on Site. The Contractor ensured that all disposal documentation including, but not limited to, all necessary manifests, bill-of-ladings, weight tickets, and certificates of treatment/destruction were provided to the CM.

The Contractor coordinated with the transport and disposal facilities to determine an appropriate number of transport trucks based on the capabilities of the facility to accept material. Trucks were scheduled daily to eliminate the need for the staging trucks on local roadways and minimize the wait time for loading. Vehicles waiting to be loaded were directed to the onsite staging area.

Upon entry to the Site, trucks were inspected to ensure the proper placards, decals, and permits were displayed. Placards, decals, and permits not applicable to the waste stream generated to the IRM were removed or covered prior to trucks leaving the Site. Transport trucks utilized the most direct hauling route between the Site and the disposal facility.

All material transportation vehicles leaving the Site were watertight and were decontaminated in accordance with the Decontamination Plan prior to departing. The watertight beds were lined with plastic truck liners prior to material being placed in the bed. If significant odors were noted, the material in the bed was covered with Rusmar odor suppressant foam prior to being covered in plastic. Finally, a solid tarp was affixed to the truck bed to prevent odors and volatilization or fugitive dust emissions during transit to the treatment facility. On occasion when a truck arrived at the Site without a solid tarp, the truck was not allowed to transport materials from the Site.

3.1.2.3. Impacted Soils and Bulky Waste

All impacted excavated materials were transported to Clean Earth of Southeast Pennsylvania (CESP) located in Morrisville, Pennsylvania.

MGP-impacted material excavated from below the water table, that contained a moisture content that was above disposal/treatment standards to be transported safely (e.g., without risk of a liquid spilling), was drained prior to shipment. These materials were stockpiled within the excavation until space constraints were reached. An excavated material stockpile pad was then constructed adjacent to the additional excavation cells to accommodate materials. Water that accumulated during the process decanted back into the excavation or was collected in a frac tank when the excavated material stockpile pad was used. Soil amendment materials were approved by NYSDEC and kept onsite, but ultimately not used. A total of 5,283 tons of impacted soil was transported and disposed of at CESP. Waste manifests for impacted materials transported to CESP are included in Appendix B.

3.1.2.4. Unimpacted Bulky Waste

Unimpacted bulky waste (i.e., asphalt pavement sections, concrete, brick, and debris) was handled and stockpiled separately from impacted materials. A total of 876 tons of unimpacted bulky waste were disposed of at Con-Strux LLC. Weight tickets for unimpacted waste are included in Appendix B.

3.1.2.5. Decontamination Water and Impacted Groundwater

While it was not anticipated that impacted groundwater would be collected during this IRM, due to Site constraints described above, groundwater from the excavated material stockpile pad was collected for offsite disposal. Impacted groundwater was generated from soils decanting within the excavated material stockpile pad and pumped into a 5,000-gallon fractionalization tank with the decontamination water. Approximately 2,479 gallons of fluids were collected and treated offsite at Clean Water of New York, Inc. located in Staten Island, New York. Waste manifests for wastewater transported to Clean Water of New York, Inc. are in Appendix B.

3.1.2.6. Soil Disposal Characterization Analyses

Soil samples for waste characterization were collected from the proposed IRM excavation areas prior to the start of 22 Oak Street IRM. These were analyzed in accordance with the receiving facilities' guidelines and all Local, State and Federal laws. The pre-characterization soil analysis results and the waste disposal facilities approval letters are provided in Appendix A.

3.1.3. Erosion and Sediment Control Plan

The erosion and sediment controls for all remedial construction were performed in conformance with requirements presented in the New York State Guidelines for Urban Erosion and Sediment Control and the Site-specific Erosion and Sediment Control Plan as provided in the IRMWP and the NYSDEC-approved Site Operations Plan prepared by Posillico.

3.1.4. Community Air Monitoring Plan (CAMP)

The CAMP Work Plan was provided in the IRM Work Plan. The CAMP monitoring network consisted of three air monitoring stations (AMS) using Aeroqual® AQS-1 and one portable GEI-owned station constructed with a MiniRAE 3000 and a MetOne™ ES-642 aerosol monitor. Attached to AMS-2753 was a

meteorological station for determining and recording wind direction. Three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the Site perimeter, and one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The stations recorded real-time total volatile organic compound (TVOC) and particulate matter 10 micrometers or less in size (PM_{10}) concentrations along the Site perimeter. The stations were operated during remedial activities from September 16 to December 13, 2024.

The CAMP Work Plan established a contingency plan that used a three-tiered classification to provide an early warning system and mitigation procedures to prevent emissions from intrusive activities at the Site. The 15-minute average action levels from the NYSDEC/NYSDOH-approved CAMP Work Plan are provided below:

Target	Action Level
Total Volatile Organic Compounds (TVOCs)	5.0 ppmv
TVOCs (maximum allowable concentration)	25 ppmv
Particulate Matter (PM10)	150 $\mu g/m^3$

Notes:
1. ppmv – parts per million volume
2. $\mu g/m^3$ – micrograms per cubic meter
3. Target concentrations were averaged over a 15-minute period

An alert was issued to National Grid and the Engineer (GEI) if concentrations were elevated to near action levels for a 15-minute period and were potentially attributed to MGP-impacted materials generated during ground-intrusive activities. The warning system is provided below:

- Site Condition 1: Normal or ambient air conditions where all target concentrations (e.g., TVOCs, PM_{10}, etc.) were less than 75 percent of the action level. No action required; continue monitoring.
- Site Condition 2: Concentration of at least one target was greater than or equal to Site Condition 1, but less than the action level. Implement response actions detailed in the CAMP Work Plan.
- Site Condition 3: Concentration of at least one target was greater than or equal to the action level. Implement response actions detailed in the CAMP Work Plan.

When elevated concentrations were present (preliminary Site Condition 2 or Site Condition 3), GEI notified the Contractor. A summary of the CAMP activities performed during the IRM is included in Appendix C and summarized in subsection 3.2.5 below.

3.1.5. Vibration Monitoring Plan

National Grid retained GEI to conduct vibration monitoring to monitor potential vibration impacts from the IRM construction activities. Work activities, methods of mitigation during construction, and methods for vibration monitoring were presented by GEI in the *Technical Specifications for IRM, Operable Unit No. 4, 22 Oak Streety Excavation, Bay Shore/Brightwaters Former MGP Site,* submitted as an appendix to the IRMWP to NYSDEC in March 2023.

Vibration monitoring and mitigation activities were conducted during all intrusive activities of the IRM, which took place during September 9 through December 13, 2024.

The Vibration Monitoring Plan results are discussed in subsection 3.2.6 below and the data is provided in Appendix D.

3.1.6. Contractors Submittals

The Contractor submitted a Site Operations Plan for 22 Oak Street IRM on April 12, 2024, along with various other required technical submittals. The Engineer reviewed all plans and submittals for this remedial project and confirmed that they were in compliance with the IRM Work Plan. All remedial documents were submitted to NYSDEC and NYSDOH in a timely manner and prior to the start of remedial work. The Site Operations Plan was submitted to the NYSDEC on April 29, 2024, for review and approved on June 21, 2024. The imported fill material requests and supporting documentation were submitted to the NYSDEC on July 24, 2024, and approved on July 29, 2024.

3.2. Remedial Program Elements

3.2.1. Contractors and Consultants

The Engineer (GEI), under contract to National Grid, served as the Engineer of Record for the 22 Oak Street IRM. The Engineer was responsible for engineering design and oversight of the Contractor to ensure compliance with Contract Documents for the purposes of certifying the Construction Completion Report. The Engineer did not direct the Contractor on specific means and methods; however, the Engineer advised the Contractor of non-compliance with the Contract Documents and identified corrective action. GEI assisted National Grid in the review of technical specifications, remedial contractor proposals, and contractor remedial design submittals. GEI was also responsible for implementing the CAMP and the Vibration Monitoring Plan.

GEI also served as the Construction Manager under contract to National Grid and represented National Grid to ensure the IRM construction activities were conducted in conformance with the project-specific Contract Documents and Site-specific community requirements. The Construction Manager was National Grid's representative onsite and was responsible for managing all Site activities, maintenance of Site sampling logs, meteorological logs, and Contractor invoice and change order review on behalf of National Grid. This also included providing day-to-day field oversight of IRM construction activities to ensure technical compliance with the design documents and conformance with all relevant portions of NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation. The Construction Manager assisted National Grid with communications with NYSDEC and NYSDOH, and other project stakeholders, including adjacent property owners, other members of the community, and city government officials.

The Contractor (Posillico), under contract to National Grid, was responsible for all construction activities including, but not limited to, compliance with all applicable OSHA health and safety regulations, construction personnel health and safety, implementation of odor control measures (as necessary), traffic control, Site security, excavation, material handling, transportation and disposal activities

associated with the IRM, and any other specified tasks outlined in the Work Plan or the Contract Documents.

The following are the key personnel or agencies involved with IRM activities at the Site:

National Grid:	Mr. William Ryan, Manager – Downstate New York MGP Program Mr. Michael Quinlan, Senior Program Manager MGP Program National Grid Corporation Site Investigation and Remediation Department 175 East Old Country Road Hicksville, NY 11801 (516) 545-2586
NYSDEC:	Mr. Matthew Ayers, Project Manager MGP Remedial Section Division of Environmental Remediation New York State Department of Environmental Conservation 625 Broadway Albany, NY 12233 (518) 402-9662
NYSDOH:	Mr. James Sullivan Bureau of Environmental Exposure Investigation New York State Department of Health Empire State Plaza Albany, NY 12237 (518) 402-5584
Contractor:	Mr. Joseph Posillico III, Senior Vice President Mr. Michael Perciballi, Vice President Posillico Environmental, Inc. 1750 New Highway Farmingdale, NY 11735 (631) 752-2145
GEI:	Mr. Christopher Morris, Project Manager GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture 1000 New York Avenue Suite B Huntington Station, NY 11746 (631) 760-9300

Mr. Matthew O'Neil, P.E., Engineer of Record

Mr. Russell Morang, Construction Manager
GEI Consultants, Inc.
455 Winding Brook Drive, Suite 201
Glastonbury, CT 06033
(860) 368-5300

Documentation of agency approvals required by the IRM Work Plan is included in Appendix E. Other non-agency permits relating to the remediation project are also provided in Appendix E.

3.2.2. Site Preparation

The property owner completed the demolition of the existing building prior to the start of the IRM. This included the demolition of all above ground building elements, the disconnection of all utilities and the removal of all associated debris from the Site prior to the Contractor's mobilization. The Contractor removed the foundation elements as part of the IRM work scope.

The Contractor was responsible for preparing the Site for the IRM, including the establishment of work zones, support facilities, decontamination facilities, erosion control measures, and installation of temporary security fencing around the work area and roll-off box staging area (for debris).

The Contractor was responsible for removing/protecting existing trees, fences, and structures/ appurtenances agreed upon by property owner in advance of the IRM.

Soil erosion and sediment control measures were installed prior to excavation and maintained throughout the project in accordance with the Erosion and Sediment Control Plan in Section 5 of the IRMWP and the Contract Documents.

In accordance with the IRMWP, existing groundwater monitoring wells WCMW-11S, 11I, 11D, 22S, 22I, 23S, 23I, 26S, 26I, 29S and 29I were abandoned prior to excavation activities in accordance with the NYSDEC Technical Guidance CP43: Groundwater Monitoring Well Decommissioning Policy, dated November 3, 2009 (CP43) and the Contract Documents. Figure 4 shows the locations of the abandoned monitoring wells and well abandonment reports prepared by the Contractor are provided as Appendix F.

Following preparation of the Site, a decontamination/anti-traction pad was constructed at the entrance to the work area.

3.2.3. Site Security

Temporary fencing was installed around the perimeter of the IRM work area to fill gaps in the existing chain-link fence. Privacy screen was placed over the eight-foot-tall, chain-linked fence which aided in controlling dust and odors generated from the excavation. The fence encompassed all work areas to include the excavation area, waste handling equipment, and storage areas. The existing truck gate was maintained for access and was locked at the end of each workday.

All vehicles and/or equipment left on the Site were secured at the end of each working day. Vehicles and equipment remained inside the perimeter fence overnight and during non-workdays.

Overnight security personnel were provided by the Contractor to patrol the Site.

3.2.4. Odor and Dust Control

Odors and dust were controlled using several methods during the excavation by the application of Rusmar non-scented AC-645 Long Duration Odor Suppressant Foam, water, and plastic sheeting. One-Rusmar PFC-NTC/8 unit was used during the excavation and transportation of material to the TFS. Foam was applied liberally and nearly on a continuous basis to the exposed excavation, the excavator bucket, and the excavated material stockpile. Water was used to control nuisance dust from exiting the Site perimeter. This was generally applied by hose. Plastic sheeting was also used to cover the stockpiled material at the end of the shift when needed.

3.2.5. CAMP Results

The purpose of the CAMP was to provide early detection of potential emissions and associated contingency measures to mitigate human exposure to potential harmful constituents. The CAMP successfully documented air quality conditions throughout the excavation and associated remedial activities. The CAMP results are provided in the *Community Air Monitoring Summary Report,* included as Appendix C. A summary of the key findings is provided below.

GEI conducted the CAMP during the activities from September 16,2024 to December 13, 2024. The CAMP monitoring network consisted of three Aeroqual® AQS-1 air monitoring stations using and one GEI-owned portable air monitoring station constructed with a MiniRAE 3000 and a MetOne™ ES-642 aerosol monitor. Attached to AMS-2753 was a meteorological station for assessing and measuring wind direction. Three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the Site perimeter, and one portable air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The real-time stations continuously measured concentrations of total volatile organic compound (TVOC) and particulate matter 10 micrometers in diameter or less (PM_{10}) along the Site perimeter. GEI maintained a trained air monitoring staff technician on the Site at all times during ground intrusive activities and handling of impacted excavated materials. The responsibilities of the CAMP technician were to monitor the system, calibrate equipment, and respond to any potential CAMP monitoring concerns.

The CAMP Work Plan established a contingency plan that employed a three-tiered classification and warning system based on the NYSDOH action limits. An alert was issued to National Grid and the construction manager (GEI) if concentrations were elevated to near or above action limits based on a 15-minute average during remedial activities.

Weekly summary reports of air monitoring activities were prepared and provided to the remedial construction team, NYSDEC, and NYSDOH during ground intrusive activities and handling of excavated-impacted materials.

TVOC detections remained below the prescribed Alert Limits. PM_{10} concentrations exceeded the Action Limits on three occasions, and the Response Limit (but not the Action Limit) on two additional occasions. The appropriate actions outlined in the CAMP contingency plan were implemented during work hours to address these exceedances. One of the Action Limit exceedances occurred upon equipment start-up, prior to construction activities taking place onsite, therefore no immediate corrective action was taken by Posillico. One Action Limit exceedance occurred while managing the clean import soil stockpile near the air monitor. GEI instructed Posillico to spray water on the stockpile before further soil movement to reduce particulates. One Action Limit exceedance occurred outside of normal work hours, when no construction activities were taking place onsite, therefore no corrective action was taken by Posillico. Following each alert GEI continued to monitor Site conditions to confirm the effectiveness of any corrective actions taken by Posillico to return to Site Condition 1.

The CAMP implemented by GEI and the response by onsite personnel, provided an early warning and detection system to mitigate potential offsite exposures to Site-related contaminants associated with intrusive operations. The CAMP data demonstrated that the remedial methods and practices implemented by National Grid and its subcontractors were effective in controlling offsite emissions of TVOC and PM_{10} for the duration of Site activities.

3.2.6. Vibration Monitoring Results

Vibration monitoring was performed to assess potential community impacts and to establish a data record for implementing mitigation measures. Monitoring was performed during all phases of construction activities at the Site and in accordance with the Technical Specifications for IRM.

3.2.6.1. Vibration Monitoring

Vibration monitoring was performed at two discrete locations in the vicinity of construction activities as depicted on Figure 1 of Appendix D. One vibration monitor (VM-01) was placed along 22 Oak Street in the vicinity of the access gate and the second vibration monitor (VM-02) was placed in the southeast corner of the Site adjacent to the LIRR tracks.

Vibration monitoring was conducted from September 16 through December 13, 2024.

Ground-borne vibration levels were measured using portable seismographs with equipment and technical support from Instantel. Vibration monitoring equipment was operated, maintained, and logged by GEI.

3.2.6.2. Response Criteria

Vibration threshold values were developed based on background and expected values, as described in the Noise and Vibration Mitigation Work Plan. The threshold values and actions to be taken if those values were exceeded are provided in the following table:

Vibration		
Action Level	**Vibration Threshold and Limiting Values, Inches/Second Peak Particle Velocity (PPV)**	**Comments**
Warning	0.25	If this threshold value is exceeded, the construction procedures should be modified or remedial measures may be implemented, as required to not reach the limiting value. Tier 2 Mitigation Measures will be employed.
Temporary Halt	0.5	If this limiting value is exceeded, the work will be halted and the potential causes will be reviewed and possible mitigation methods investigated.

3.2.6.3. Vibration Monitoring Results

Vibration monitoring exceedances recorded during the project, associated possible exceedances, and mitigation measures are summarized in the following table. The vibration monitoring data is provided in Appendix D.

Table A – Vibration Monitoring Exceedances

		Peak Particle Velocity (in/s)				
Date	**Location**	**Trans-verse**	**Vertical**	**Longitudinal**	**Possible Influences**	**Mitigation Measures**
11/12/24	VM-2	**1.1531**	**0.6315**	**0.4357**	Driving slide rail panels into ground	Instructed Posillico to try to excavate more material beneath the panels for easier installation of panels
12/06/24	VM-1	**1.2664**	**0.8198**	**0.3907**	Posillico was moving hay bales near Loc-1. Roller was in use to compact backfill material.	Instructed Posillico to be cautious while working around monitors
	VM-1	**5.6973**	**3.0146**	**4.4954**	Unknown, occurred after work hours	N/A

Notes

-**BOLD** indicates exceedance of 0.25 inches/second (in/s) Vibration Threshold as indicated in the *Operable Unit No. 4 Cesspool Area and Pond Area Noise and Vibration Mitigation Plan* dated March 23, 2011.

-**BOLD AND HIGHLIGHTED** indicates exceedance of 0.5 in/s Limiting Value as indicated in the *Noise and Vibration Mitigation Plan* dated March 23, 2011.

3.2.7. Reporting

The Contractor's daily reports and the weekly progress meeting minutes are provided in Appendix G. GEI's daily reports which include a digital photograph log, are provided in Appendix H.

3.3. MGP-Related Impacted Materials Removal

The Site was remediated in accordance with the remedy presented in the NYSDEC-approved IRM Work Plan. The selected remedy consisted of the excavation of impacted soil to meet the RAOs specified in Section 2.1 above. The excavation was performed in a single phase as described below and as depicted in Figure 2.

The following sections describe the work performed as part of the IRM as well as the field observations. The record drawings issued by the Contractor are included in Appendix I.

3.3.1. Soil Excavation

Execution of the excavation and backfilling portions of the IRM was completed from September 29 through December 13, 2024. The proposed excavation limits were delineated using a compilation of visual impact observations and soil analytical data. The eastern extent of excavation was specified to extend two feet east of the western extent of the 2011 IRM excavation, which includes a small area on the TOI property immediately west of the former building. The extent of excavation for the 22 Oak Street IRM was approximately 6,000 square feet and is depicted in Figure 3.

The excavation area was divided into forty-one discrete excavation cells using a slide rail excavation support system. Cells ranged from 15 to 21 feet deep. Each cell was excavated in-the-wet and backfilled prior to proceeding to the next cell to control odors and prevent recontamination of excavated cells via contact with adjacent cells. This sequence prevented cross-contamination by allowing the contractor to work from the clean cells to the impacted cells. Staged soils during the excavation were stockpiled within the excavation area for decanting and covered with suppressant foam and poly plastic.

An excavated material stockpile pad was required to allow decanting of excavated soils associated with the final three excavation cells. The base of the excavated material stockpile pad was constructed with two layers of 20-mil high density polyethylene (HDPE) sheeting separated by six inches of import common fill. The HDPE sheets overlapped a minimum of 12 inches and seams were sealed with a flexible rubberized bonding agent to prevent migration of MGP-related impacts to the clean soil beneath the excavated material stockpile pad. The excavated material stockpile pad was sloped towards the excavation for water collection and the perimeter of the excavated material stockpile pad was enclosed by stray hay bales covered by the HDPE sheeting. Outside of work hours the excavated material stockpile pad was covered by 6-mil HDPE sheeting with a 12-inch overlap.

Per the IRMWP if the source material as defined in 6 NYCRR Part 375-1.2(au) was present, then the contractor was required to excavate up to 2 feet below the target excavation. Source material observations requiring additional excavation included the following:

- Evidence of MGP-related NAPL.
- Grossly impacted media.

As discussed by the project team during the Construction Progress Meeting on Thursday, September 26, 2024, evidence of sheen or odors alone did not constitute source material requiring additional excavation as the water in the excavation was in contact with impacted soils excavated during the IRM and the transfer of sheens and odors was anticipated as the excavator bucket moved through the groundwater.

The remedial contractor had materials on-hand during excavation activities to remove sheens from the surface of the groundwater within the excavation. This included sorbent pads, booms, or other materials designed to remove petroleum impacts from the groundwater.

When onsite, the NYSDEC representative signed off on the last bucket of each cell prior to the installation of the orange snow fence demarcation fabric and placement of stone backfill.

3.4. Waste Disposal

3.4.1. Soil

Excavated soils were transferred to a stockpile within the excavation or the excavated material stockpile pad to allow for water drainage prior to transport. A total of 5,273.32 tons of impacted soils were transported to CESP for disposal.

All excavated soil handled by CESP was treated and disposed of in accordance with all required and applicable state and federal laws and regulations. Soil characterization data and letters from applicants to disposal facility owners, and acceptance letters from disposal facility owners are attached in Appendix A. Waste manifests, certificates of disposal, and weight tickets obtained from CESP are included in Appendix B. A summary table of the quantity of soil removed each day is also presented in Appendix B.

3.4.2. Wastewater

Water from decontamination pad and from the excavated material stockpile pad was contained in one 5,000-gallon fractionalization tank. A total of 2,479 gallons of fluids were collected, transported offsite, and treated at Clean Water of New York, Inc., located in Staten Island, New York. Electronic copies of the manifests issued by Clean Water of New York, Inc. are provided in Appendix A.

3.5. Remedial Performance/Documentation Sampling

The extent of excavation required to meet the remedial goals and RAOs was determined via delineation soil sampling prior to the implementation of the IRM. In accordance with the NYSDEC-approved IRMWP, National Grid performed the Phase II PDI to further support delineation of the IRM limits. Field work was completed on April 10, 11 and 12, 2024, July 8, 2024, and August 2 and 5, 2024. The borings in August were completed following the demolition of the onsite building. The locations of the soil borings are shown in Figure 2. The work was completed per the NYSDEC-approved Phase I PDI work plan, the

recommendations in the Phase I PDI Summary Report, and the Phase II PDI scope submitted to the NYSDEC via email on April 28, 2024.

The results of the Phase II PDI indicated several locations where the limits of the IRM excavation should be modified. The NAPL-saturated soils observed in PDI-102 at a depth of 15 to 20 feet was both outside and deeper than the limits of the planned 18-foot excavation cell. The planned cell was extended to the southeast and increased to a depth of 21 feet to remove the impacted soils. Additionally, the analytical results from the soil samples collected at PDI-3A indicated the extent along the southern wall of the excavation should be modified to remove impacted materials that exceed the RUSCOs.

The NAPL-saturated soils observed in PDI-7 at a depth of 7 to 12 feet were at the planned limits of the excavation. A previous soil removal IRM was performed within the sidewalk adjacent 22 Oak Street, therefore additional excavation beyond the property limits in the direction of Oak Street was not required.

The NAPL-saturated soils observed in PDI-14 from 8 to 9.5 feet were outside of the planned excavation limits. However, the analytical results from soil samples collected from this boring within both the 5 to 10-foot and 10- to 15-foot bgs intervals met Unrestricted SCOs for all analytes.

In the NYSDEC's response letter to National Grid's PDI Phase II Summary Letter and in-person discussions at the Site during the IRM, NYSDEC requested additional soil borings be advanced to delineate impacts noted in soil boring PDI-3A, PDI-14, and along the western limits of the IRM excavation. The Phase III PDI field work was completed on October 12, 2024, and October 21, 2024. The Phase III PDI boring locations are shown on Figure 2.

The soil borings PDI-19 and PDI-20 installed along the southwestern limits of the excavation confirmed that the limits meet the remedial goals of the IRM. The analytical results from the soil sample collected from PDI-19 and the visual impacts noted in PDI-20 bound the impacts noted in PDI-11 and PDI-12.

Petroleum-coated soils were noted in soil borings PDI-17, PDI-18, PDI-18R, and PDI-18 Offset. Fingerprint analyses support that remnant impacts in soils to the southeast of the excavation most closely resemble diesel and/or #2 fuel oil and are not related to the operations of the former MGP.

As a result of the PDI and discussion with NYSDEC, the limits of the excavation along the southern edge were extended to include PDI-3A, and additional excavation was performed to a depth of 13 feet bgs to remove impacts observed in borings PDI-14, PDI-15, and PDI-17.

The PDI Phase II and Phase III Summary Letters, response letters, and additional correspondence between National Grid and NYSDEC regarding the limits of the IRM excavation are provided in Appendix J. Figure 5 provides a summary of the analytical sample results collected over all phases of the PDI overlain on the limits of the remedial excavation.

As Posillico reached the target depth of the excavation within each cell, the NYSDEC representative inspected the last bucket of soil for the presence of source material and signed off prior to the installation of the orange snow fence demarcation fabric and placement of stone backfill. In the absence of the NYSDEC representative, GEI inspected and documented the last bucket of soil prior to placement

of the demarcation fabric. Photos of the material were maintained for review by the NYSDEC representative at a later date. Source material was observed in the last bucket of soil collected from the target depths of Cells 10, 11, 19, 21, and 35. Additional soil was removed from each cell prior to reinspection and final sign-off by the NYSDEC representative or GEI. Figure 3 provides the final elevation and depth below surface grade for each excavation cell.

3.6. Imported Backfill

Following the installation of the snow fence demarcation barrier each excavation cell was backfilled with clean import stone fill to approximately 1 foot above the water table. A geotextile fabric was installed above the stone fill, followed by the installation of import common fill in compacted lifts to approximately six inches of the surface. The stone fill material consisted of washed, 0.75-inch gravel from Posillico Wash Plant, located in Farmingdale, New York. The common fill was sourced from Posillico Materials, located in Holtsville, New York. Environmental sampling results and geotechnical data were provided to NYSDEC for approval prior to import, provided in Appendix K. A total of 4,353.88 tons of stone fill and 1,547.56 tons of common fill were imported to the Site for the IRM. Weight tickets for import fill are provided in Appendix K.

Stone backfill was placed below the groundwater table using the excavator bucket. Common fill was placed in approximate 12-inch lifts and compacted to 95% of the material's maximum dry density weight and compacted with a smooth drum vibratory roller. Density testing was performed on common fill material at a minimum of one test per 2,500 square feet per lift. Density testing results are included in Appendix L.

3.7. Soil Impacts Remaining at the Site

Following the completion of the 22 Oak Street IRM, grossly impacted soils related to the operation of the Bay Shore/Brightwaters Former MGP Site have been removed from the 22 Oak Street property. The 2005 Cesspool Excavation IRM removed impacted soils from the north corner of the property and along the Oak Street ROW. The 2011 Cesspool IRM removed impacted soils from the north corner of the property and along the eastern property line adjacent to the Town of Islip parking lot. Following the completion of the two historic IRMs, impacts related to the operations of the former MGP were limited to beneath the footprint of the onsite structures, which were inaccessible until demolition in September 2024. Historic borings and the borings completed during the PDI delineated the horizontal and vertical limits of grossly impacted soils related to the former MGP Site and were incorporated into the final excavation design (Figure 5). As noted in the PDI Summary Letters, petroleum-related impacts not associated with the former MGP operations were noted in soil borings to the southeast of the excavation. Analytical results for soil samples collected during the Phase II and Phase III PDI activities are provided in Appendix J. Figure 2 depicts the limits of the 2011 Cesspool IRM, the 22 Oak Street IRM, and shows impacts remaining at the Site observed during historic investigations and the PDI.

3.8. Deviations from the IRM Work Plan

This section presents a summary of deviations from the June 2023 NYSDEC-approved IRM Work Plan.

3.8.1. Excavation Extent

In accordance with the NYSDEC-approved IRMWP, and as described in section 3.5, additional soil borings were performed to delineate the horizontal and vertical limits of the excavation. Based on results of the PDI activities, the excavation was extended in the southern direction and the excavation surrounding boring PDI-9 was extended to a depth of 21 feet bgs. The actual lateral and vertical limits of the excavation are presented in Figure 5 and the As-Built drawings provided in Appendix I.

3.9. Restoration

Site restoration activities included all work performed to restore the Site to pre-IRM conditions following remedial construction. Restoration activities included:

- Grading the Site to prevent ponding or runoff of stormwater that could adversely affect the Site or adjacent properties.
- Cover disturbed portions of the property with import crushed stone to stabilize the Site until redevelopment.
- Replacing curbs and sidewalks in the Oak Street ROW.
- Removing the temporary security fence.
- Removal of the anti-tracking/decontamination pad.
- Removing erosion control measures after permanent surface stabilization was achieved.
- Replacing or repairing any removed or damaged structures or appurtenances, if damaged during the IRM.
- Removal of all construction equipment and any temporary facilities.
- Demobilization of CAMP equipment.
- Disconnect temporary utilities.

4. Conclusions

Remedial activities completed at the Site were conducted in accordance with the with the NYSDEC-approved IRM Work Plan for Operable Unit No. 4 – 22 Oak Street Excavation, Bayshore/Brightwaters, Former MGP Site dated June 2023. Additional soil excavation was performed to remove grossly impacted MGP-related material identified in the Phase II and Phase III Pre-Design Investigations. Modifications to the excavation limits were provided to and approved by the NYSDEC. The IRM met the remedial goals to remove MGP-impacted material via excavation consistent with the RUSCOs. By application of the RUSCOs and given that the conditions identified in DER-10 section 1.12(b)1 have been met, no ongoing Site management, long term groundwater monitoring, environmental easements or deed restrictions on the property are required.

- MAJOR GROUND SURFACE CONTOUR

NOTE:

THE CONSTRUCTION DOCUMENTS USED DATA FROM PREVIOUS SOIL BORINGS TO ESTABLISH TERMINAL DEPTH OF EXCAVATION. FOLLOWING DEMOLITION OF THE STRUCTURE, PROJECT STAKEHOLDERS DETERMINED ON SITE THAT ELEVATION 18.3' WOULD BE UTILIZED AS THE STARTING ELEVATION FOR THE WORK. THE STARTING ELEVATION WAS DISCUSSED AND CONFIRMED BY NYSDEC DURING THE PROJECT MEETING ON OCTOBER 2, 2024.

EXCAVATION CELL DATA

CELL NUMBER	TOP ELEVATION	BOTTOM ELEVATION	DEPTH	LENGTH	WIDTH
1	18.3	3.17	15.13	8	12

Re: National Grid Bay Shore OU-4 IRM

CESP Approval No. 243150169

Dear Tina Ezratty,

This letter is confirmation of acceptance of 5900 tons of MGP impacted soil from site remediation at 22 Oak Street, Bay Shore, NY 11706 to the Clean Earth of Southeast Pennsylvania (CESP) facility under Permit # 301254.

This approval is based upon material being accurately represented by all information provided to CESP at this time, including, but not limited to, Waste Profiles, analysis, site diagrams, site historical documents, and sampling plans. The approval numbers must be provided when scheduling and include the approval numbers and grid ID on all manifests when shipping soils generated from this site.

CESP intends to thermally treat and reuse this material as landfill cover at the Waste Management landfill located in Fairless Hills. All waste class information provided is within the permit limitations stipulated in the facilities Solid Waste Permit. CESP will not accept material that has been characterized as hazardous or listed waste.

Clean Earth Inc. and its subsidiaries would like to thank you for giving us the opportunity to manage this waste stream. If you have any questions or require further information, please contact me at 267-355-1655 or email at acrawford@cleanearthinc.com.

Sincerely,

Alieya Crawford

B. Waste Stream Information

1. Name of waste: Contaminated Non-Haz Soil
2. State waste code(s) (if applicable):
3. Process generating waste (attach separate sheet, if necessary):
4. Is this waste a soil amendment (i.e., bio-solids, paper pulp sludge, lime neutralized industrial water sludge, potable water treatment plant sludge)? ☐ Yes ☑ No ☐ N/A
5. Estimated quantity of waste: 5,900 ☑ Tons ☐ Cubic Yards ☐ Drums 6. Term of project: ☐ Recurring ☑ One Time

C. Waste Composition/Characteristics

1. Source of contamination (i.e., UST, AST, leak, spill, non-specific, etc.): Former MGP Facility
2. Type of contamination (i.e., diesel, gasoline, waste oil, heating oil, MGP, etc.): MGP Waste
3. Contaminants of concern: BTEX, Metals
4. Provide a site history detailing past and present land uses, on site storage/process information, and any activities related to contaminants of concern (attach a separate sheet if necessary): Former MGP facility, currently commercial property
5. Composition of waste (clay, rock, sand, debris, moisture, chemical constituents, contaminants, etc.). Should equal 100%:

92% soils	%	2% debris	%
4% moisture	%	2% chem. consituents	%

6. Is this site a State or Federal Superfund Site? ☐ Yes ☑ No
7. Is this site enrolled in or subject to any city or state environmental programs? ☑ Yes ☐ No
   7a. If yes, provide program name and site number: NYS Inactive Hazardous Waste Site #152170
8. Is a laboratory report being supplied with this profile? ☑ Yes ☐ No
   8a. If yes, you will need to attach a sampling plan description and a diagram of sampling locations that ties to the data. Please refer to the "Site Sampling Diagram" form in the approval package for guidance.
9. Is the waste represented in this profile classified as a radioactive material under USEPA 40 CFR 191.12 or other applicable regulatory provisions? ☐ Yes ☑ No
10. Does this waste contain any levels of polychlorinated biphenyls (PCBs)? ☐ Yes ☑ No
    10a. If yes, list the level:
    10b. If yes, is the waste material TSCA-regulated or defined as a PCB remediation waste under TSCA? ☐ Yes ☑ No ☐ N/A

Global Job #

Sales Rep

C. Waste Composition/Characteristics (continued)

11. Does this waste contain herbicides, pesticides, asbestos, insecticides or residues thereof at concentrations that would render it hazardous as defined by 40 CFR Part 261 or be subject to additional state or federal regulations? ☐ Yes ☑ No
12. Is the waste represented in this profile generated as a result of corrective action taken under the RCRA Underground Storage Tank Regulations found in 40 CFR Part 280? ☐ Yes ☑ No
13. Is the waste a dioxin bearing waste? ☐ Yes ☑ No
14. Is the waste a treatment residue from a previously listed or characteristic hazardous waste? ☐ Yes ☑ No
15. Is there a nuisance level of odor associated with this waste? ☑ Yes ☐ No
16. Are there any special handling instructions for management of this waste? ☐ Yes ☑ No
17. Have any odor suppressing foams or absorbents been added to the waste? ☑ Yes ☐ No
18. Does this waste contain Coal Combustion By-products (CCB); e.g., Fly Ash, Slag? (Applicable to Maryland facilities.) ☐ Yes ☑ No ☐ N/A
19. If yes to any of the above questions, please explain (attach an additional sheet if necessary):

Odor suppressant foam is used on site to mitigate odors in residential areas.

D. Generator/Agent Certification

1. I certify that the waste represented by this profile is not a listed hazardous waste, nor does it contain a listed hazardous waste, nor does it exhibit any characteristics of a hazardous waste as defined by 40 CFR Part 261. ☑ Yes ☐ No
2. I certify that this profile and all attachments contain true and accurate descriptions of the waste material. ☑ Yes ☐ No
3. I certify that all relevant information in possession of the Generator/Agent pertaining to known or suspected hazards with regard to the waste has been disclosed to Clean Earth. ☑ Yes ☐ No
4. I certify that all changes that occur in the characteristics of the waste will be identified by the Generator/Agent and disclosed to Clean Earth prior to providing the waste to Clean Earth. ☑ Yes ☐ No
5. I certify that the analytical data attached hereto are derived from testing representative sample(s) as referenced in 40 CFR 261.20 or an equivalent state regulatory provision. ☑ Yes ☐ No ☐ N/A
6. For sites that contain "clean fill," the undersigned certifies that a site investigation was conducted and that the soil was characterized according to the proposed Clean Earth facility(ies) acceptance criteria for soil classification as "clean fill" and where applicable in accordance with the Pennsylvania Management of Fill Policy. ☑ Yes ☐ No ☐ N/A
7. The undersigned has determined the non-hazardous status of said waste in accordance with 40 CFR 262.11. Should, at any time after delivery, the material accepted by Clean Earth be found to be non-conforming to the information certified in this profile and represented by documentation attached hereto, it becomes the responsibility of the Generator/Agent to remove the waste from the designated Clean Earth facility within five (5) calendar days of notification. Notification is to be verbal followed by written notification, overnight receipted. It is the Generator's/ Agent's responsibility to abide by all Federal, State and Local regulations associated with the removal of their waste. If the waste is not removed within the specified time period, said disposal shall be arranged by a Clean Earth representative and billed to the Generator/Agent at cost plus basis. Furthermore, the Generator/Agent will be responsible for any and all costs for decontamination required by the Clean Earth facility that is related to the Generator's/Agent's material and all liability for such non-conforming waste shall revert to Generator/Agent. ☑ Yes ☐ No

COMMONWEALTH OF PENNSYLVANIA
DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF WASTE MANAGEMENT

FORM U
REQUEST TO PROCESS OR DISPOSE OF RESIDUAL WASTE

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form U, reference the item number and identify the date prepared. The date on attached sheets needs to match the date noted below.

DEP USE ONLY
Date Received & General Notes

Date Prepared/Revised

SECTION A. LANDFILL CLIENT (LANDFILL OR PROCESSING FACILITY OWNER) INFORMATION

DEP Client ID#	DEP Client Type / Code
248648	Pennsylvania Corporation

Organization Name or Registered Fictitious Name
Clean Earth of Southeast Pennsylvania, Inc.

SECTION B. LANDFILL SITE (LANDFILL OR PROCESSING FACILITY) INFORMATION

DEP Site ID#	Site Name	Landfill Permit ID#
459023	Clean Earth of Southeast Pennsylvania/Morrisville	

Site Contact Last Name	First Name	MI	Suffix
Siravo	Joseph	M	

Site Contact Title	Site Contact Email Address
Technical Manager	jsiravo@cleanearthinc.com

SECTION C. GENERATOR CLIENT (GENERATOR OF THE WASTE) INFORMATION

Company Name			DEP Generator ID#
National Grid	Quinlan	Mike	

Company Contact Last Name	First Name	MI	Suffix
175 East Old Country Road			

Company Mailing Address Line 1	Company Mailing Address Line 2		
Hicksville	NY	11801	Nassau

Company Address Last Line – City	State	Zip+4	Country
(516) 220-4363	michael.quinlan@nationalgrid.com		

Company Phone	Ext	Company Email Address

Company Contact Last Name	First Name	MI	Suffix

Contact Phone	Ext	Contact Email Address

If a Subsidiary, Name of Parent Company

Is the waste generated at the Company Mailing Address (noted above)? ☐ Yes ☑ No
If 'No', describe location of waste generation and storage. 22 Oak Street, Bay Shore, NY 11706

Township	County	State

SECTION D. WASTE DESCRIPTION

Residual Waste Code	Residual Waste Code Description	Amount	Unit of Measure	Time Frame
			☐ cu yd ☐ gal ☐ lb ☐ ton	☐ One Time

1. GENERAL PROPERTIES

a. pH Range to (based on analyses or knowledge)

b. PhysicalState
☐ Liquid Waste (EPA Method 9095)
☑ Solid (EPA Method 9095)
☐ Gas (ambient temperature & pressure)

c. Physical Appearance **Color** Brown **Odor** VOCs
Number of Solid or Liquid Phases of Separation N/A
Describe each phase of separation.

d.	**Attached is information from the generator certifying that a hazardous waste determination has been done and that the waste is not hazardous waste as defined in 40 CFR 261, as incorporated by reference at 25 Pa. Code 261a.1.** **Caution: If 'No', the application form is incomplete.**	☑ Yes	☐ No	
e.	**Is the waste treated hazardous waste?** **If 'Yes', list the hazardous waste code(s) that apply to the hazardous waste before treatment.** **If 'Yes', what treatment option was selected?** **What limit was required to be met by the treatment option?** **Provided a copy of the certification required under 40 CFR 268.7(a), as incorporated by reference at 25 Pa. Code 268a.1, that the waste meets all the land disposal restriction requirements, as specified in 40 CFR Part 268, Subpart D (Land Disposal Restrictions-Treatment Standards).**	☐ Yes ☐ Yes	☑ No ☐ No	
f.	**Has the waste been delisted as a hazardous waste by DEP or US EPA?**	☐ Yes	☑ No	☐ N/A
g.	**Has the waste been accepted for disposal/processing at another Pennsylvania facility?** **If 'Yes', list the facility permit ID number(s).**	☐ Yes	☑ No	
h.	**Has an application for disposal/processing of the waste at another Pennsylvania facility been submitted?** **If 'Yes', list the facility permit ID number(s).**	☐ Yes	☑ No	

2. Analysis Attachments

a.	**Has a detailed physical, chemical and radiological characterization of the waste and its leachate been conducted**? **If 'No', provide detailed explanation supporting use of generator knowledge in lieu of actual analysis.** **If 'Yes', attached is a description of the waste sampling methods in accordance with the waste sampling plan as required in §271.611(a)(3) or §287.132(a)(3) and the *Final Guidance Document on Radioactivity Monitoring at Solid Waste Processing and Disposal Facilities* (Document Number 250-3100-001).**	☑ Yes ☑ Yes	☐ No ☐ No	
b.	**Laboratory Accreditation Number**			

3. Process Description & Schematic Attachments

a.	**Attached is a detailed description of the manufacturing and/or pollution control processes producing the waste.** **If 'No', provide explanation.** Not applicable.	☐ Yes	☑ No	
b.	**Attached is a schematic of the manufacturing and/or pollution control processes producing the waste.** **If 'No', provide explanation.** Not applicable.	☐ Yes	☑ No	
c.	**Attached is the substantiation for a confidentiality claim (if portions of the information submitted are confidential).**	☐ Yes	☐ No	☑ N/A

4. Chemical Analysis Waiver

Categories of residual wastes that qualify for the waiving of chemical analysis by the Department are listed below. Check the appropriate box(es) that match the waste proposed to be accepted for disposal.

- ☐ burnt demolition debris
- ☐ carpet scraps
- ☐ cured rubber scrap
- ☐ empty containers (uncontaminated)
- ☐ fabric/cloth/textile/leather wastes (excluding treatment sludges)
- ☐ fiberglass insulation scrap
- ☐ food wastes (excluding treatment sludges)
- ☐ hot drained used oil filters (non-terne plated)
- ☐ metal scrap (excluding powdered grindings or if contaminated with fluids or oils)
- ☐ sawdust (excluding treated wood)
- ☐ shingle scrap
- ☐ waste paper
- ☐ waste plastic (excluding extrusion manufacturing & uncured resins)
- ☐ wood wastes (excluding treated wood)
- ☐ Other (explain)

All waste types not listed above must be approved in writing in the permit by the Department prior to processing or disposal facility acceptance.

SECTION E. PROPOSED PROCESSING, STORAGE AND/OR DISPOSAL METHOD

Will any special handling procedures (besides direct disposal) described in the waste acceptance plan, be used when managing the waste? ☒ Yes ☐ No

If 'Yes', describe. Material will be processed in accordance with Solid Waste Permit No. 301254

Is this material re-used for construction or operation of the facility? ☐ Yes ☒ No

If Yes', describe.

SECTION F. SOURCE REDUCTION STRATEGY

Form 25R must be completed by the generator and attached to this application unless waived in the instructions to that form.

Form 25R attached. ☐ Yes ☐ No ☑ Waived

SECTION G. CERTIFICATION OF GENERATOR

I hereby certify that the statements of fact contained therein are true and correct to the best of my knowledge, information and belief. This statement and verification is made subject to the penalties of 18 Pa. C.S.A. Section 4904, relating to un-sworn falsification to authorities.

Name of Responsible Official	**Title**
Michael Quinlan	Sr. Program Manager

	8/22/24
Signature	**Date**

SECTION H. CERTIFICATION OF PROCESSING OR DISPOSAL FACILITY

I hereby certify that the statements of fact contained therein are true and correct to the best of my knowledge, information and belief. This statement and verification is made subject to the penalties of 18 Pa. C.S.A. Section 4904, relating to un-sworn falsification to authorities.

Name of Responsible Official	**Title**
Joseph M. Siravo	Technical Manager

Signature	**Date**

ANALYTICAL REPORT

PREPARED FOR

Attn: Christopher Morris
GEI Consultants, Inc.
1000 New York Avenue
Huntington Station, New York 11746

Generated 4/18/2024 4:59:40 PM

JOB DESCRIPTION

National Grid - Bay Shore (WC) 22 Oak Street

JOB NUMBER

460-301903-1

Eurofins Edison
777 New Durham Road
Edison NJ 08817

See page two for job notes and contact information.

Eurofins Edison

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Authorization

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	MS or MSD is outside acceptance limits.
*	Duplicate RPD exceeds control limits
*	RPD of the LCS and LCSD exceeds the control limits
*	Surrogate is outside acceptance limits.
E	Compound concentration exceeds the upper level of the calibration range of the instrument for that specific analysis.
J	Indicates an estimated value.
U	Analyzed for but not detected.

GC VOA

Qualifier	Qualifier Description
U	Analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
*	Surrogate is outside acceptance limits.
U	Analyzed for but not detected.

Metals

Qualifier	Qualifier Description
*	Duplicate analysis not within control limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
J	Sample result is greater than the MDL but below the CRDL
N	Spiked sample recovery is not within control limits.
U	Indicates analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.
J	Sample result is greater than the MDL but below the CRDL
N	Spiked sample recovery is not within control limits.
U	Indicates analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
460-301903-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The sample was received on 4/11/2024 6:00 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.0°C.

Receipt Exceptions
Level 2 final report as per client request. Report type not indicated on Chain of Custody.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: The following sample was diluted due to the nature of the sample matrix: 041024-WC-2 (460-301903-1). Elevated reporting limits (RLs) are provided.

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 460-969285 was outside the method criteria for the following analyte(s): < 2-Nitroaniline and Benzaldehyde>. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 460-969233 and analytical batch 460-969285 recovered outside control limits for the following analytes: < Benzidine>.

Method 8270E - TCLP: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: 041024-WC-2 (460-301903-1). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gasoline Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015D_DRO: Surrogate recovery for the following sample was outside control limits: 041024-WC-2 (460-301903-1). Evidence of matrix interference due to high target analytes is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015D_DRO: o-Terphenyl surrogate recovery is outside control limits. spike recovery is within control limits.Therefore data is qualified and reported.

(CCV 460-969552/12)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs

Job ID: 460-301903-1 (Continued) Eurofins Edison

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020B - TCLP: The method blank for preparation batch 460-969659 and 460-969962 and analytical batch 460-970020 contained lead above the method detection limit. This target analyte concentration was less than 10% of the measured concentration in the sample; therefore, re-extraction of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 9045D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following sample has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: 041024-WC-2 (460-301903-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

GEI Consultants, Inc.
1000 New York Avenue
Huntington Station, New York 11746

Generated 4/19/2024 4:59:59 PM

JOB DESCRIPTION

National Grid - Bay Shore (WC) 22 Oak Street

JOB NUMBER

460-301976-1

Eurofins Edison
777 New Durham Road
Edison NJ 08817

See page two for job notes and contact information.

Eurofins Edison

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Authorization

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Indicates an estimated value.
U	Analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	Surrogate is outside acceptance limits.
*	MS or MSD is outside acceptance limits.
*	Duplicate RPD exceeds control limits
J	Indicates an estimated value.
U	Analyzed for but not detected.

GC VOA

Qualifier	Qualifier Description
U	Analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
*	MS or MSD is outside acceptance limits.
*	Surrogate is outside acceptance limits.
*	RPD of the LCS and LCSD exceeds the control limits
U	Analyzed for but not detected.

Metals

Qualifier	Qualifier Description
*	Duplicate analysis not within control limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Sample result is greater than the MDL but below the CRDL
N	Spiked sample recovery is not within control limits.
U	Indicates analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.
U	Indicates analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
460-301976-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/12/2024 8:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.0°C.

Receipt Exceptions
Level 2 final report as per client request. Report type not indicated on Chain of Custody.

GC/MS VOA
Method 8260D - TCLP: The continuing calibration verification (CCV) analyzed in batch 460-969977 was outside the method criteria for Vinyl chloride (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in batch 460-969484 was outside the method criteria for the following analyte(s): < 2-Nitroaniline, 4-Methylphenol, 4-Nitroaniline, 4-Nitrophenol, Benzaldehyde, Caprolactam and N-Nitrosodi-n-propylamine>. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: 041124 WC-4 (460-301976-3). These results have been reported and qualified.

Method 8270E: The following sample was diluted due abundance of target analytes : 041124 WC-1 (460-301976-1). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 460-969547 was outside the method criteria for the following analyte(s): < Benzaldehyde>. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows two of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: 041124 WC-4 (460-301976-3). These results have been reported and qualified.

Method 8270E: six surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: 041224 WC-5 (460-301976-4). These results have been reported and qualified.

Method 8270E - TCLP: The continuing calibration verification (CCV) analyzed in batch 460-970116 was outside the method criteria for the following analyte(s): Hexachlorobutadiene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any

detection for the affected analyte(s) is considered estimated.

Method 8270E - TCLP: The surrogate recovery for the LB associated with preparation batch 460-969878 and 460-969979 and analytical batch 460-970116 was outside the upper control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gasoline Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015D_DRO: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 460-969410 and analytical batch 460-969449 recovered outside control limits for the following analytes: C10-C44

Method 8015D_DRO: Surrogate recovery for the following sample was outside control limits: 041224 WC-5 (460-301976-4). Evidence of matrix interference due to high target analytes is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015D_DRO: The following samples were diluted due to abundance of target analytes : 041124 WC-1 (460-301976-1), 041124 WC-3 (460-301976-2) and 041124 WC-4 (460-301976-3). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8015D_DRO: o-Terphenyl surrogate recovery is outside control limits. spike recovery is within control limits.Therefore data is qualified and reported.

(CCV 460-969552/12)

Method 8015D_DRO: o-Terphenyl surrogate recovery is outside control limits.Spike recovery is within limits.Data has been reported.

(CCV 460-969449/26)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
Method 8082A: The Decachlorobiphenyl surrogate recovery for the following samples was outside acceptance limits (high biased) on the confirmation column due to matrix interference: 041124 WC-3 (460-301976-2), 041124 WC-4 (460-301976-3) and 041224 WC-5 (460-301976-4). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
Method 8081B - TCLP: The following samples required a copper clean-up to reduce matrix interferences caused by sulfur: 041124 WC-4 (460-301976-3), 041224 WC-5 (460-301976-4), 041224 WC-6 (460-301976-5) and 041224 WC-7 (460-301976-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 9045D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: 041124 WC-1 (460-301976-1), 041124 WC-3 (460-301976-2), 041124 WC-4 (460-301976-3), 041224 WC-5 (460-301976-4), 041224 WC-6 (460-301976-5) and 041224 WC-7 (460-301976-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: GEI Consultants, Inc.
Job ID: 460-301976-1
Project/Site: National Grid - Bay Shore (WC) 22 Oak Street

Client Sample ID: 041124 WC-1
Lab Sample ID: 460-301976-1

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Authorization

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	The analyte was found in an associated blank, as well as in the sample.
U	Analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
*	Surrogate is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
460-307222-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/8/2024 6:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.4°C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Subcontract Work
Method 9023 EOX: This method was subcontracted to ALS Group USA Corp. The subcontract laboratory certification is different from that of the facility issuing the final report. The subcontract report is appended in its entirety.

Method 8260D - Volatile Organic Compounds by GC/MS - TCLP
Samples WC-1A(10-12.5)-grab (460-307222-1), WC-2A(12.5-15)-grab (460-307222-2), WC-4A(17-19)-grab (460-307222-3), WC-SB(10.0-12.5)grab (460-307222-4), WC-6A(12-15)-grab (460-307222-5) and WC-7B(8-10)-grab (460-307222-6) were analyzed for Volatile Organic Compounds by GC/MS - TCLP. The samples were leached on 7/11/2024 and analyzed on 7/12/2024.

Samples WC-1A(10-12.5)-grab (460-307222-1)[10x], WC-2A(12.5-15)-grab (460-307222-2)[10x], WC-4A(17-19)-grab (460-307222-3)[10x], WC-SB(10.0-12.5)grab (460-307222-4)[10x], WC-6A(12-15)-grab (460-307222-5)[10x] and WC-7B(8-10)-grab (460-307222-6)[10x] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method 8015D - Diesel Range Organics (DRO) (GC)
Samples WC-1A(10-12.5)-grab (460-307222-1), WC-2A(12.5-15)-grab (460-307222-2), WC-4A(17-19)-grab (460-307222-3), WC-SB(10.0-12.5)grab (460-307222-4), WC-6A(12-15)-grab (460-307222-5) and WC-7B(8-10)-grab (460-307222-6) were analyzed for Diesel Range Organics (DRO) (GC). The samples were prepared on 7/10/2024 and analyzed on 7/10/2024 and 7/11/2024.

Samples WC-1A(10-12.5)-grab (460-307222-1)[50x], WC-2A(12.5-15)-grab (460-307222-2)[50x] and WC-4A(17-19)-grab (460-307222-3)[10x] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Surrogate o-Terphenyl recovery for the following sample was outside control limits: WC-SB(10.0-12.5)grab (460-307222-4). Evidence of matrix interference due to high target analytes is present; therefore, re-extraction and/or re-analysis was not performed.

The following samples were diluted due to abundance of target analytes: WC-1A(10-12.5)-grab (460-307222-1) and WC-2A(12.5-15)-grab (460-307222-2). As such, surrogate recoveries are not reported, and elevated reporting limits (RLs) are provided.

Surrogate o-Terphenyl recovery for the following sample was outside control limits: WC-4A(17-19)-grab (460-307222-3). Evidence of matrix interference due to high target analytes is present; therefore, re-extraction and/or re-analysis was not performed.

Method Moisture - Percent Moisture
Samples WC-1A(10-12.5)-grab (460-307222-1), WC-2A(12.5-15)-grab (460-307222-2), WC-4A(17-19)-grab (460-307222-3), WC-SB(10.0-12.5)grab (460-307222-4), WC-6A(12-15)-grab (460-307222-5) and WC-7B(8-10)-grab (460-307222-6) were analyzed for

Job ID: 460-307222-1 (Continued)

Percent Moisture. The samples were analyzed on 7/9/2024.

Analytical Results Report For **Eurofins Environment Testing America - Edison NJ**

Project 460-307222-1
Workorder 3368526
Report ID 341110 on 7/23/2024

Certificate of Analysis

Enclosed are the analytical results for samples received by the laboratory on Jul 11, 2024.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Sarah Leung (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Global.

Reference

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- Except as qualified, Clean Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 136, including but not limited to the following EPA Method reference revisions:
  EPA 300.1 Rev. 1.0-1997
  EPA 300.0 Rev. 2.1-1993
  EPA 353.2 Rev. 2.0-1993
  EPA 410.4 Rev. 1.0-1993
  EPA 420.4 Rev. 1.0-1993
  EPA 365.1 Rev. 2.0-1993
  EPA 200.7 Rev. 4.4-1994
  EPA 200.8 Rev. 5.4-1994
  EPA 245.1 Rev. 3.0-1994
- Except as qualified, Safe Drinking Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 141.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND) above the MDL
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Practical Quantitation Limit for this Project
ND	Not Detected - indicates that the analyte was Not Detected
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits
#	Please reference the result in the Results Section for analyte-level flags.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

CASE NARRATIVE

Client: GEI Consultants Inc

Project: National Grid - 22 Oak Street, Bay Shore

Report Number: 460-308930-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 08/05/2024; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Subcontract Work
Method 9023 EOX: This method was subcontracted to ALS Group USA Corp. The subcontract laboratory certification is different from that of the facility issuing the final report. The subcontract report is appended in its entirety.

TCLP VOLATILE ORGANIC COMPOUNDS
Sample PDI-11 Grab (12'-14) (460-308930-4) was analyzed for TCLP Volatile Organic Compounds in accordance with EPA SW-846 Method 8260D - TCLP/1311. The samples were leached on 08/07/2024 and analyzed on 08/08/2024.

Chloroform was detected in method blank LB 460-989277/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Refer to the QC report for details.

Sample PDI-11 Grab (12'-14) (460-308930-4)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the TCLP volatiles analysis.

All other quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GC/MS)
Samples PDI-11 (2'-5') (460-308930-1), PDI-11 (5'-10') (460-308930-2), PDI-11 (10'-15') (460-308930-3), PDI-12 (2'-5') (460-308930-5), PDI-12 (5'-10') (460-308930-6), PDI-12 (10'-15') (460-308930-7), PDI-7 (2'-5') (460-308930-8), PDI-7 (5'-10') (460-308930-9) and PDI-7 (10'-15') (460-308930-10) were analyzed for Volatile Organic Compounds (GC/MS) in accordance with EPA SW-846 Method 8260D. The samples were prepared on 08/06/2024 and analyzed on 08/08/2024 and 08/09/2024.

Four surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside

acceptance criteria without performing re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: PDI-7 (10'-15') (460-308930-10). These results have been reported and qualified.

The following sample was diluted due to the abundance of non-target analytes: PDI-7 (5'-10') (460-308930-9). Elevated reporting limits (RLs) are provided.

Refer to the QC report for details.

No other difficulties were encountered during the Volatiles analysis.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples PDI-11 (2'-5') (460-308930-1), PDI-11 (5'-10') (460-308930-2), PDI-11 (10'-15') (460-308930-3), PDI-12 (2'-5') (460-308930-5), PDI-12 (5'-10') (460-308930-6), PDI-12 (10'-15') (460-308930-7), PDI-7 (2'-5') (460-308930-8), PDI-7 (5'-10') (460-308930-9) and PDI-7 (10'-15') (460-308930-10) were analyzed for semivolatile organic compounds (GC/MS) in accordance with EPA SW-846 Method 8270E. The samples were prepared on 08/07/2024 and analyzed on 08/08/2024.

Chrysene, Fluoranthene, Phenanthrene and Pyrene failed the recovery criteria low for the MS of sample PDI-11 (2'-5')MS (460-308930-1) in batch 460-989430.

Chrysene, Fluoranthene, Phenanthrene and Pyrene failed the recovery criteria low for the MSD of sample PDI-11 (2'-5')MSD (460-308930-1) in batch 460-989430.

Refer to the QC report for details.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS

Sample PDI-11 Grab (12'-14) (460-308930-4) was analyzed for gasoline range organics in accordance with EPA SW-846 Method 8015D - GRO. The samples were prepared on 08/06/2024 and analyzed on 08/07/2024.

No difficulties were encountered during the GRO analysis.

All quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS

Sample PDI-11 Grab (12'-14) (460-308930-4) was analyzed for diesel range organics in accordance with EPA SW-846 Method 8015D - DRO. The samples were prepared on 08/07/2024 and analyzed on 08/08/2024.

No difficulties were encountered during the DRO analysis.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS/PERCENT MOISTURE

Samples PDI-11 (2'-5') (460-308930-1), PDI-11 (5'-10') (460-308930-2), PDI-11 (10'-15') (460-308930-3), PDI-11 Grab (12'-14) (460-308930-4), PDI-12 (2'-5') (460-308930-5), PDI-12 (5'-10') (460-308930-6), PDI-12 (10'-15') (460-308930-7), PDI-7 (2'-5') (460-308930-8), PDI-7 (5'-10') (460-308930-9) and PDI-7 (10'-15') (460-308930-10) were analyzed for percent solids/percent moisture in accordance with EPA Method CLPISM01.2 (Exhibit D) Modified. The samples were analyzed on 08/06/2024.

No difficulties were encountered during the %solids/moisture analysis.

All quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

CASE NARRATIVE

Client: GEI Consultants Inc

Project: National Grid - 22 Oak Street, Bay Shore

Report Number: 460-308932-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 08/05/2024; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.3 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Receipt Exceptions
A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC). The client was notified and cancelled the associated VOC analysis on August 13, 2024.

The following samples were activated for TCLP VOCs analysis by the client on August 14, 2024: WC-8 Grab (PDI-12 (13'-14')) (460-308932-1) and WC-8 Grab (PDI-7 (12'-15')) (460-308932-2). This analysis was not originally requested on the chain-of-custody (COC).

Subcontract Work
Method 9023 EOX: This method was subcontracted to ALS Group USA Corp. The subcontract laboratory certification is different from that of the facility issuing the final report. The subcontract report is appended in its entirety.

TCLP VOLATILE ORGANIC COMPOUNDS
Samples WC-8 Grab (PDI-12 (13'-14')) (460-308932-1), WC-8 Grab (PDI-7 (12'-15')) (460-308932-2) and WC-8 (460-308932-3) were analyzed for TCLP Volatile Organic Compounds in accordance with EPA SW-846 Method 8260D - TCLP/1311. The samples were leached on 08/07/2024 and 08/16/2024 and analyzed on 08/08/2024 and 08/17/2024.

The continuing calibration verification (CCV) associated with batch 460-991007 recovered above the upper control limit for Carbon tetrachloride and Tetrachloroethene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Chloroform was detected in method blank LB 460-989277/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Chloroform was detected in method blank LB 460-990890/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

1,2-Dibromo-3-Chloropropane failed the recovery criteria low for LCSD 460-989423/5.

Refer to the QC report for details.

Samples WC-8 Grab (PDI-12 (13'-14')) (460-308932-1)[10X], WC-8 Grab (PDI-7 (12'-15')) (460-308932-2)[10X] and WC-8 (460-308932-3)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the TCLP volatiles analysis.

All other quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GC/MS)
Samples WC-8 Grab (PDI-12 (13'-14')) (460-308932-1), WC-8 Grab (PDI-7 (12'-15')) (460-308932-2) and WC-8 (460-308932-3) were analyzed for Volatile Organic Compounds (GC/MS) in accordance with EPA SW-846 Method 8260D. The samples were prepared on 08/06/2024 and analyzed on 08/08/2024.

The continuing calibration verification (CCV) analyzed in batch 460-989423 was outside the method criteria for the following analytes: Chloromethane and Dichlorodifluoromethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample duplicate (LCSD) for analytical batch 460-989423 recovered outside control limits for the following analyte: 1,2-Dibromo-3-Chloropropane. This analyte was biased low in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

No difficulties were encountered during the Volatiles analysis.

All quality control parameters were within the acceptance limits.

TCLP PESTICIDES
Sample WC-8 (460-308932-3) was analyzed for TCLP pesticides in accordance with 1311. The samples were leached on 08/07/2024, prepared on 08/08/2024 and analyzed on 08/09/2024.

No difficulties were encountered during the TCLP pesticides analysis.

All quality control parameters were within the acceptance limits.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GC/MS)
Sample WC-8 (460-308932-3) was analyzed for TCLP Semivolatile organic compounds (GC/MS) in accordance with 1311. The samples were leached on 08/07/2024, prepared on 08/08/2024 and analyzed on 08/09/2024.

No difficulties were encountered during the TCLP Semivolatile organic compounds (GC/MS) analysis.

All quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC/MS)
Sample WC-8 (460-308932-3) was analyzed for semivolatile organic compounds (GC/MS) in accordance with EPA SW-846 Method 8270E. The samples were prepared on 08/07/2024 and analyzed on 08/08/2024.

The continuing calibration verification (CCV) analyzed in batch 460-989430 was outside the method criteria for the following analyte(s): < Benzaldehyde>. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Chrysene, Fluoranthene, Phenanthrene and Pyrene failed the recovery criteria low for the MS of sample 460-308930-1 in batch 460-989430.

Chrysene, Fluoranthene, Phenanthrene and Pyrene failed the recovery criteria low for the MSD of sample 460-308930-1 in batch 460-989430.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Refer to the QC report for details.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

GASOLINE RANGE ORGANICS
Samples WC-8 Grab (PDI-12 (13'-14')) (460-308932-1), WC-8 Grab (PDI-7 (12'-15')) (460-308932-2) and WC-8 (460-308932-3) were analyzed for gasoline range organics in accordance with EPA SW-846 Method 8015D - GRO. The samples were prepared on 08/06/2024 and analyzed on 08/07/2024.

No difficulties were encountered during the GRO analysis.

All quality control parameters were within the acceptance limits.

DIESEL RANGE ORGANICS
Samples WC-8 Grab (PDI-12 (13'-14')) (460-308932-1), WC-8 Grab (PDI-7 (12'-15')) (460-308932-2) and WC-8 (460-308932-3) were analyzed for diesel range organics in accordance with EPA SW-846 Method 8015D - DRO. The samples were prepared on 08/07/2024 and analyzed on 08/08/2024.

Surrogate recovery for the following sample was outside control limits: WC-8 Grab (PDI-7 (12'-15')) (460-308932-2). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Refer to the QC report for details.

Samples WC-8 Grab (PDI-12 (13'-14')) (460-308932-1)[100X] and WC-8 Grab (PDI-7 (12'-15')) (460-308932-2)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the DRO analysis.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS
Sample WC-8 (460-308932-3) was analyzed for polychlorinated biphenyls in accordance with EPA SW-846 Method 8082A. The samples were prepared on 08/08/2024 and analyzed on 08/09/2024.

No difficulties were encountered during the PCBs analysis.

All quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)
Sample WC-8 (460-308932-3) was analyzed for Total Metals (ICP) in accordance with EPA SW-846 Methods 6010D. The samples were prepared and analyzed on 08/09/2024.

Sample WC-8 (460-308932-3)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the Total Metals (ICP) analysis.

All quality control parameters were within the acceptance limits.

METALS - TCLP
Sample WC-8 (460-308932-3) was analyzed for Metals - TCLP in accordance with EPA SW-846 Method 6020B - TCLP/1311. The samples were leached on 08/07/2024, prepared on 08/08/2024 and analyzed on 08/09/2024.

for the duplicate of sample 460-308927-1. Refer to the QC report for details.

No other difficulties were encountered during the TCLP Metals analysis.

All other quality control parameters were within the acceptance limits.

METALS - TOTAL (ICP/MS)
Sample WC-8 (460-308932-3) was analyzed for Metals - Total (ICP/MS) in accordance with EPA SW-846 Method 6020B - Total. The samples were prepared on 08/07/2024 and analyzed on 08/08/2024.

Calcium, Iron, Magnesium and Sodium failed the recovery criteria low for the MS of sample 460-308891-1 in batch

460-989553. Several analytes failed the recovery criteria high.

Refer to the QC report for details.

 for the duplicate of sample 460-308891-1. Refer to the QC report for details.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

HEXAVALENT CHROMIUM
Sample WC-8 (460-308932-3) was analyzed for hexavalent chromium in accordance with EPA SW-846 Method 7196A. The samples were prepared on 08/08/2024 and analyzed on 08/09/2024.

No difficulties were encountered during the hexchrome Cr6 analysis.

All quality control parameters were within the acceptance limits.

MERCURY - TCLP
Sample WC-8 (460-308932-3) was analyzed for Mercury - TCLP in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 08/07/2024, and prepared and analyzed on 08/08/2024.

No difficulties were encountered during the TCLP Hg analysis.

All quality control parameters were within the acceptance limits.

MERCURY - TOTAL
Sample WC-8 (460-308932-3) was analyzed for Mercury - Total in accordance with EPA SW-846 Method 7471B. The samples were prepared and analyzed on 08/08/2024.

No difficulties were encountered during the Hg analysis.

All quality control parameters were within the acceptance limits.

IGNITABILITY
Sample WC-8 (460-308932-3) was analyzed for Ignitability in accordance with EPA SW-846 Method 1030. The samples were analyzed on 08/07/2024.

No difficulties were encountered during the Ignitability analysis.

All quality control parameters were within the acceptance limits.

TOTAL CYANIDE
Sample WC-8 (460-308932-3) was analyzed for total cyanide in accordance with EPA SW-846 Method 9012B. The samples were prepared on 08/10/2024 and analyzed on 08/11/2024.

No difficulties were encountered during the cyanide analysis.

All quality control parameters were within the acceptance limits.

REACTIVE CYANIDE
Sample WC-8 (460-308932-3) was analyzed for reactive cyanide in accordance with EPA SW-846 Method 7.3.3/9014. The samples were prepared and analyzed on 08/09/2024.

No difficulties were encountered during the reactive cyanide analysis.

All quality control parameters were within the acceptance limits.

REACTIVE SULFIDE
Sample WC-8 (460-308932-3) was analyzed for reactive sulfide in accordance with EPA SW-846 Method 7.3.4/9034. The samples were prepared and analyzed on 08/09/2024.

No difficulties were encountered during the reactive sulfide analysis.

All quality control parameters were within the acceptance limits.

CORROSIVITY (PH)
Sample WC-8 (460-308932-3) was analyzed for corrosivity (pH) in accordance with EPA SW-846 Method 9045D. The samples were analyzed on 08/08/2024.

This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following sample has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: WC-8 (460-308932-3).

No difficulties were encountered during the corrosivity (pH) analysis.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS/PERCENT MOISTURE
Samples WC-8 Grab (PDI-12 (13'-14')) (460-308932-1), WC-8 Grab (PDI-7 (12'-15')) (460-308932-2) and WC-8 (460-308932-3) were analyzed for percent solids/percent moisture in accordance with EPA Method CLPISM01.2 (Exhibit D) Modified. The samples were analyzed on 08/06/2024.

No difficulties were encountered during the %solids/moisture analysis.

All quality control parameters were within the acceptance limits.

Sample Summary

This Detection Summary does not include radiochemical test results.

Method Summary

Client: GEI Consultants Inc
Job ID: 460-308932-1
Project/Site: National Grid - 22 Oak Street, Bay Shore

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET EDI
8270E	Semivolatile Organic Compounds (GC/MS)	SW846	EET EDI
8015D	Gasoline Range Organics (GRO) (GC)	SW846	EET EDI
8015D	Diesel Range Organics (DRO) (GC)	SW846	EET EDI
8081B	Organochlorine Pesticides (GC)	SW846	EET EDI
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	EET EDI
6010D	Metals (ICP)	SW846	EET EDI
6020B	Metals (ICP/MS)	SW846	EET EDI
7470A	Mercury (CVAA)	SW846	EET EDI
7471B	Mercury (CVAA)	SW846	EET EDI
1030	Ignitability, Solids	SW846	EET EDI
7196A	Chromium, Hexavalent	SW846	EET EDI
9012B	Cyanide, Total andor Amenable	SW846	EET EDI
9014	Cyanide, Reactive	SW846	EET EDI
9034	Sulfide, Reactive	SW846	EET EDI
9045D	pH	SW846	EET EDI
Moisture	Percent Moisture	EPA	EET EDI
Subcontract	9023 EOX	None	ALS Group
1311	TCLP Extraction	SW846	EET EDI
3010A	Preparation, Total Metals	SW846	EET EDI
3050B	Preparation, Metals	SW846	EET EDI
3060A	Alkaline Digestion (Chromium, Hexavalent)	SW846	EET EDI
3511	Microextraction of Organic Compounds	SW846	EET EDI
3546	Microwave Extraction	SW846	EET EDI
5030C	Purge and Trap	SW846	EET EDI
5035	Closed System Purge and Trap	SW846	EET EDI
7.3.3	Cyanide, Reactive	SW846	EET EDI
7.3.4	Sulfide, Reactive	SW846	EET EDI
7470A	Preparation, Mercury	SW846	EET EDI
7471B	Preparation, Mercury	SW846	EET EDI
9012B	Cyanide, Total and/or Amenable, Distillation	SW846	EET EDI

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

PROFILE APPROVAL

Dec 03, 2024

POSILLICO ENVIRONMENTAL, INC
1750 New Highway
Farmingdale, NY 11735
Attn: Tina Ezratty

Generator:

NATIONAL GRID
National Grid Bay Shore OU-4 IRM
22 Oak Street
Bay Shore, NY 11706

Job Number 08768

Name of waste: Oily Water

The approval number for this waste stream is: **827-027**

The expiration date for this waste stream is: Jan 03, 2025

The above referenced waste stream has been approved based on information provided by you on the Generator's Waste Profile Sheet. The waste characteristics must meet all parameters as indicated on the waste profile form. Clean Water reserves the right to reject shipments arriving at the facility due to treatability, physical or chemical characteristics.

Clean Water of New York, Inc. is a fully permitted and insured NYS DEC and USCG approved facility with the authorization and capacity to accept this material.

Please use the approval code on all documentation accompanying the loads.

Please call the facility to schedule a delivery of the material.

Sincerely,

Ralph Duca
President
Clean Water of New York, Inc.

Waste Information

Name of Waste: Non-Hazardous Petroleum Impacted Water

Process Generating Waste: Decontamination of Trucks, Equipment, and Materials.

Chararistics	Physical State	Layers	Flash Point	Corrosivity (pH)
Color light grey	Solid ☐	Single Phase ☐	<100 F ☑	3-5 ☐ 5-7 ☐
Odor slight	Liquid ☑	Bi-Layered ☐	100 F-140 F ☑	7-9 ☑ 9-12 ☐
Halogens N/A	Sludge ☐	Multi-Layered ☐	> 140 F ☐	
Sulfur % N/A	Powder ☐	Emulsified ☐		Actual

Chemical Composition	Transporters
% Water 98	1
% Oil 2	2
% Solids <0	3

Was waste generated from a regulated CERCLA/Super Fund Site? ○ YES ◉ NO

Did load originate at a utility? ○ YES ◉ NO

(If this load originates at a utility, you must send in PCB analysis. Max PCB concentration must be less 2 ppm.)

Does this waste contain greater than 2 ppm PCB's or are PCB's derived from a source greater than 2 ppm? ○ YES ◉ NO

Does this waste contain greater than 1000 ppm total HOC (Halogenated Organic Compounds)? ○ YES ◉ NO

Manifest Information

Proper Shipping Name: Non-Hazardous Petroleum Impacted Water

Anticipated Volume/Units: 5000 Gallons Frequency ☐ Daily ☐ Weekly ☐ Monthly ☐ Yearly ☑ One Time

Method of Shipment ☐ Bulk Liquid ☐ Drum ☐ Other

Generator Certification

I hereby certify that all information submitted in this and all attached documents is true and accurate, based on my inquiry of those individuals immediately responsible for obtaining this information. I believe that the submitted information is true and complete to the best of my knowledge and that all suspected hazards have been disclosed. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment for knowing violations.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on November 20, 2024 and listed below. The project was identified as your project: **PE08768 National Grid Bay Shore OU-4**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24K1491-01	NOV_COMP1	Ground Water	11/19/2024	11/20/2024

General Notes for York Project (SDG) No.: 24K1491

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

24K1491-01	NOV_COMP1	40mL 01_Clear Vial Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
EXT-COMP	Completed
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

WASTE TRANSPORTER PERMIT

GENERAL CONDITIONS

The permittee must:

1. Carry a copy of this waste transporter permit in each vehicle to transport waste. Failure to produce a copy of the permit upon request is a violation of the permit.

2. Display the full name of the transporter on both sides of each vehicle and display the waste transporter permit number on both sides and rear of each vehicle containing waste. The displayed name and permit number must be in characters at least three inches high and of a color that contrasts sharply with the background.

3. Transport waste only in authorized vehicles. An authorized vehicle is one that is listed on this permit.

4. Submit to the Department a modification application for additions/deletions to the authorized fleet of vehicles. The permittee must wait for a modified permit before operating the vehicles identified in the modification application.

5. Submit to the Department a modification application to add a new waste category or a new destination facility, or to change the current waste or destination facility category. The permittee must wait for a modified permit before transporting new waste types or transporting to new destination facilities.

6. Submit to the Department a modification application for change of address or company name.

7. Comply with requirements for placarding and packaging as set forth in New York State Transportation Law as well as any applicable federal rules and regulations.

8. Contain all wastes in the vehicle so there is no leaking, blowing, or other discharge of waste.

9. Use vehicles to transport only materials not intended for human or animal consumption unless the vehicle is properly cleaned.

10. Comply with requirements for manifesting hazardous waste, regulated medical waste, or low-level radioactive waste as set forth in the New York State Environmental Conservation Law and the implementing regulations. Transporters who provide a pre-printed manifest to a generator/shipper/ offeror of regulated waste shall ensure that all information is correct and clearly legible on all copies of the manifest.

11. Deliver waste only to transfer, storage .. treatment and disposal facilities authorized to accept such waste. Permittee must demonstrate that facilities are so authorized if requested to do so.

12. Maintain liability insurance as required by New York State Environmental Conservation Law.

13. Maintain records of the amount of each waste type transported to each destination facility on a calendar-year basis. The transporter is obligated to provide a report of this information to the Department at the time of permit renewal, or to any law enforcement officer, if requested to do so.

14. Pay regulatory fees on an annual basis. Non-payment may be cause for revocation or suspension of permit.

15. This permit is not transferrable. A change of ownership will invalidate this permit.

16. This permit does not relieve the permittee from the obligation to obtain any other approvals or permits, or from complying with any other applicable federal, state, or local requirement.

17. Renewal applications must be submitted no less than 30 days prior to the expiration date of the permit to:

WASTE TRANSPORTER PERMIT

GENERAL CONDITIONS

The permittee must:

1. Carry a copy of this waste transporter permit in each vehicle used to transport waste. Failure to produce a copy of the permit upon request is a violation of the permit.

2. Display the full name of the transporter on both sides of each vehicle and display the waste transporter permit number on both sides and rear of each vehicle containing waste. The displayed name and permit number must be in characters at least three inches high and of a color that contrasts sharply with the background.

3. Transport waste only in authorized vehicles. An authorized vehicle is one that is listed on this permit.

4. Submit to the Department a modification application for additions/deletions to the authorized fleet of vehicles. The permittee must wait for a modified permit before operating the vehicles identified in the modification application.

5. Submit to the Department a modification application to add a new waste category or a new destination facility, or to change the current waste or destination facility category. The permittee must wait for a modified permit before transporting new waste types or transporting to new destination facilities.

6. Submit to the Department a modification application for any change to the permit.

7. Comply with requirements for placarding and packaging as set forth in New York State Transportation Law as well as any applicable federal rules and regulations.

8. Contain all wastes in the vehicle so there is no leaking, blowing, or other discharge of waste.

9. Use vehicles to transport only materials not intended for human or animal consumption unless the vehicle is properly cleaned.

10. Comply with requirements for manifesting hazardous waste, regulated medical waste, or low-level radioactive waste as set forth in the New York State Environmental Conservation Law and the implementing regulations. Transporters who provide a pre-printed manifest to a generator/shipper/ offeror of regulated waste shall ensure that all information is correct and clearly legible on all copies of the manifest.

11. Deliver waste only to transfer, storage, treatment and disposal facilities authorized to accept such waste. Permittee must demonstrate that facilities are so authorized if requested to do so.

12. Maintain liability insurance as required by New York State Environmental Conservation Law.

13. Maintain records of the amount of each waste type transported to each destination facility on a calendar-year basis. The transporter is obligated to provide a report of this information to the Department by March 1 of each year.

14. Pay regulatory fees on an annual basis. Non-payment may be cause for revocation or suspension of permit.

15. This permit is not transferrable. A change of ownership will invalidate this permit.

16. This permit does not relieve the permittee from the obligation to obtain any other approvals or permits, or from complying with any other applicable federal, state, or local requirement.

Executive Summary

On behalf of National Grid, GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) implemented the Community Air Monitoring Program (CAMP) from September 16, 2024 to December 13, 2024 during the 22 Oak Street Excavation Interim Remedial Measure (IRM) in Operable Unit 4 (OU-4) of the Bay Shore/Brightwaters Former Manufactured Gas Plant (MGP) Site in Bay Shore, New York (the Site).

The remedial activities included demolition of concrete slab foundations, installation of soil borings for supplemental PDI data, the abandonment of previously existing monitoring wells, installation of slide rail system for excavation, excavation and export of non-hazardous contaminated soil, backfilling with imported clean fill material, and compaction of fill.

The CAMP was conducted in accordance with the New York State Department of Environmental Conservation (NYSDEC) and New York State Department of Health (NYSDOH)-approved Community Air Monitoring Program Work Plan (GEI, 2020) and NYSDOH CAMP monitoring requirements provided in the NYSDEC *DER-10/Technical Guidance for Site Investigation and Remediation* (NYSDEC, 2010).

The purpose of the CAMP was to provide early detection of potential off-Site migration of vapors (total volatile organic compounds (TVOCs) or particulate matter [dust] 10 microns in diameter or less (PM_{10}) associated with the excavation of materials during the IRM. Real-time air monitoring allowed National Grid and the remedial contractor to receive alerts that Action Limits are being approached or exceeded so that mitigation activities could be instituted in a short period of time. The CAMP was conducted in support of intrusive activities National Grid implemented under an Administrative Order on Consent (AOC) (Index no. D1-0001-98-11) between National Grid's predecessor and the NYSDEC.

GEI implemented the CAMP with three Aeroqual® AQS-1 monitoring stations (AMS-2753, AMS-2754, and AMS-2755) that were located at the Site perimeter and one portable air monitoring station (AMS-104P) located between the excavation and Long Island Rail Road (LIRR) parking lot during intrusive activities. Real-time fixed station air monitoring continuously measured TVOCs and particulate matter [dust] 10 micrometers in diameter or less (PM_{10}). GEI maintained a trained air monitoring staff technician on the Site at all times during intrusive activities and handling of impacted excavated materials. The responsibilities of the CAMP technician were to monitor the system, calibrate equipment, and respond to any potential CAMP monitoring concerns.

The CAMP Work Plan established a contingency plan consisting of a three-tiered classification and warning system based on the NYSDOH action limits. An alert was issued to National Grid and the remedial contractor if concentrations exceeded Action Limits .

Weekly CAMP summary reports of air monitoring activities were prepared and provided to the remedial construction team, NYSDEC, and NYSDOH during intrusive activities and handling of excavated-impacted materials. The results of the CAMP are contained herein.

E.S.1. Key Findings

PM_{10} concentrations were measured on three occasions above the 15-minute action limit of 150 $\mu g/m^3$ during ground intrusive activities or handling of excavated impacted materials. There was two additional instance where PM_{10} concentrations were measured above the Alert Limit of 100 $\mu g/m^3$ but below the Action Limit of 150 $\mu g/m^3$. Representatives of National Grid, the NYSDEC and the remedial contractor were notified in each case and the appropriate mitigation measures were taken.

The CAMP was implemented during 22 Oak Street Excavation IRM intrusive activities, which provided the framework to monitor concentrations of TVOCs and PM_{10}, along with weather data and Site activities, to evaluate if readings occurred during Site activities and, if needed, alert National Grid and its subcontractors to rapidly enact the mitigation measures set forth in the plan. The CAMP data demonstrated that the remedial methods and practices implemented by National Grid and its subcontractors were effective in controlling off-Site emissions of TVOC and PM_{10} for the duration of Site activities.

1. Introduction

National Grid retained GEI Consultants, Inc. (GEI) to conduct a community air monitoring program (CAMP) during the Cesspool and Pond Area Interim Remedial Measure (IRM) in Operable Unit 4 (OU-4) of the Bay Shore/Brightwaters Former Manufactured Gas Plant (MGP) in Bay Shore, New York (the Site) (Figure 1). Remedial work was conducted under an Administrative Order on Consent (AOC) (Index No. D1-0001-98-11) between KeySpan (National Grid's predecessor) and the New York State Department of Environmental Conservation (NYSDEC) for the Bay Shore/Brightwaters Former MGP. The New York State Department of Health (NYSDOH) requires real-time monitoring for TVOCs and PM_{10} concentrations during ground intrusive activities at the perimeter of investigation and remedial construction sites.

The NYSDOH generic CAMP requirements are outlined in Appendix 1A of the NYSDEC's 2010 *DER-10 / Technical Guidance for Site Investigation and Remediation*. GEI developed and implemented the *Community Air Monitoring Program Work Plan: Bay Shore/Brightwaters Former MGP Site* dated April 2020 [CAMP Work Plan], to fulfill the CAMP monitoring requirement for remedial activities at the Site. The CAMP Work Plan was submitted to and approved by the NYSDEC as an appendix to the Operable Unit No. 4 22 Oak Street Excavation Interim Remedial Measure Work Plan (GEI, 2023).

1.1. Purpose and Objectives

The purpose of this CAMP was to monitor TVOCs and PM_{10} at the Site perimeter to provide early detection for when concentrations approached or exceeded Action Limits. The action limits were designed to help mitigate airborne offsite migration of Site-related contaminants during ground-intrusive activities. Real-time air monitoring allowed the construction team to respond to concentrations approaching action limits by implementing mitigation measures to control TVOCs and PM_{10} airborne concentrations in a timely manner.

Baseline monitoring was performed starting September 16, 2024 until the start of intrusive activities on September 18, 2024 and the CAMP was conducted during remedial activities until December 13, 2024 . This report represents the methods, results, and conclusions of the CAMP throughout these activities.

1.2. Contingency Plan

The CAMP Work Plan established a contingency plan that used a three-tiered classification system for providing early detection and mitigation procedures to prevent emissions from intrusive activities at the Site. The 15-minute average action limits from the NYSDEC/NYSDOH-approved CAMP Work Plan are provided below:

Air Monitoring Response and Action Limits	
Target Compounds	**Response Limit**
TVOCs (15-minute average concentration)	3.7 ppm greater than background*
Respirable Particulate Matter (PM_{10})	100 $\mu g/m^3$ greater than background*
Target Compounds	**Action Limit**
TVOCs (15-minute average concentration)	5.0 ppm greater than background*
TVOCs (1-minute concentration)	25 ppm greater than background**
Respirable Particulate Matter (PM_{10})	150 $\mu g/m^3$ greater than background*

Notes:

1. ppm – parts per million
2. $\mu g/m^3$ – micrograms per cubic meter
3. TVOCs – Total Volatile Organic Compounds
4. PM_{10} – Particulate Matter 10 micrometers in diameter or less
5. * Background is defined as the difference in 15-minute average concentration between a given location and corresponding upwind location.
6. ** Action Limit exceedance requires work stoppage and mitigation of the condition that is potentially causing the exceedance]

The following Site Conditions were implemented in response to exceedance. The electronically recorded data was used to calculate 15-minute average readings for comparison to Action Limits to determine the Site Condition.

The warning system is provided below:

- Site Condition 1: Normal or ambient air conditions where all target concentrations are less than the Alert Limits for respirable particulate matter or TVOC.
- Preliminary Site Condition 2: Instantaneous concentration of at least one target is equal to or greater than the Alert Limit, but 15-minute time-weighted concentration of the target remained below the Alert Limit.
- Site Condition 2: 15-minute time-weighted average concentration of at least one target is equal to or greater than the Alert Limit, but less than the Action Limit.
- Site Condition 3: Time-weighted average concentration of at least one target is equal to or greater than the Action Limit.

If a Preliminary Site Condition 2 or Site Condition 3 was initiated, GEI notified the remedial contractor to implement mitigation activities.

1.3. Site Setting

The Bay Shore Former MGP Site is located near the south shore of Long Island, approximately 6,000 feet north of the Great South Bay. The Site is currently divided into four OUs (Figure 1). OU-1 consists of the former MGP main operations area and the parcels immediately downgradient and to the west of the main operations area. OU-2 includes the groundwater plume extending south of OU-1. OU-3 is located west of OU-1 and includes the Brightwaters Yard and the associated downgradient groundwater plume.

OU-4 is located approximately 350 feet east of OU-1 and includes the former cesspool and pond area and the downgradient Watchogue Creek/Crum's Brook.

The IRM activity at the focus of this CCR are located within OU-4 and include 22 Oak Street. The term "Site" refers 22 Oak Street. The Site map is provided on Figure 2.

22 Oak Street IRM is immediately south of the 3 Center Avenue property and consists of portions of the Oak Street right-of-way (ROW), portions of the Town of Islip (TOI) commuter parking lot for the Long Island Rail Road (LIRR) Montauk Line Bay Shore Station, and portions of the 22 Oak Street property. The 22 Oak Street parcel is a former oil terminal (the former Standard Oil Distribution Station) and is currently in the process of being redeveloped for mixed residential/commercial uses. The 22 Oak Street IRM is bounded by residential properties to the north, industrial/commercial properties to the west and east, and the LIRR to the south.

2. Methods

2.1. Community Air Monitoring Plan

The CAMP monitoring network consisted of three real-time air monitoring stations using the Aeroqual Air Monitoring System. Three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the Site perimeter, and one portable GEI-owned air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The air monitoring stations recorded TVOC and PM_{10} concentrations along the Site perimeter and one meteorological station recorded temperature, relative humidity, barometric pressure, wind speed, and wind direction. The stations were operated during ground intrusive activities from September 18, 2024 to December 13, 2024. Air monitoring station locations are shown on Figure 2.

Baseline CAMP monitoring started on September 16, 2024 during various Site mobilization activities and ended on September 18, 2024. The activities during Site preparation/mobilization consisted of installation of silt fence and hay bales, construction of decontamination facilities, and mobilization of equipment to the Site.

GEI conducted the CAMP during the following intrusive activities:

22 Oak Street Excavation IRM

- September 22, 2024 to September 28, 2024:
    - Demolition of concrete slab and footings.
    - Loaded concrete off Site.
- September 29, 2024 to October 4, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cells 1 through 4.
    - Stockpiled and dewatered saturated soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.
    - Imported granular backfill.
    - Exported non-hazardous soil.
- October 7, 2024 to October 12, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cells 5 through 10.
    - Stockpiled soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.

    - Imported granular backfill.
    - Exported non-hazardous soil.
    - On Saturday (October 12, 2024) drilled geoprobe borings for supplemental PDI data.
- October 14, 2024 to October 18, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cells 10 through 14.
    - Stockpiled and dewatered saturated soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.
    - Imported granular backfill.
    - Exported non-hazardous soil.
- October 21, 2024 to October 25, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cell 15 and Cells 17 through 20.
    - Stockpiled soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.
    - Imported granular backfill.
    - Exported non-hazardous soil.
    - On Monday (October 21, 2024) drilled geoprobe borings for supplemental PDI data.
- October 27, 2024 to November 2, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cell 16 and Cells 21 through 24
    - Stockpiled soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.
    - Imported granular backfill.
    - Exported non-hazardous soil.
- November 4, 2024 to November 8, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cell 25 and Cells 28 through 30.
    - Stockpiled soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.
    - Imported granular backfill.

    - Exported non-hazardous soil.
    - Built stock pile adjacent to Cells 36 through 38.

- November 11, 2024 to November 15, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cells 26, 31, 32, and 38.
    - Stockpiled soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.
    - Imported granular backfill.
    - Exported non-hazardous soil.
    - Built stockpile adjacent to Cells 36 through 38.
- November 18, 2024 to November 22, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cells 33 through 38.
    - Stockpiled soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.
    - Imported granular backfill.
    - Exported non-hazardous soil.
- November 25, 2024 to November 29, 2024:
    - Installed slide rail system for excavations.
    - Completed excavation and ¾ inch stone backfill of Cells 39 through 41.
    - Stockpiled soils within the excavation footprint.
    - Imported ¾ inch stone for backfill.
    - Imported granular backfill.
    - Exported non-hazardous soil.
- December 2, 2024 to December 6, 2024:
    - Imported granular backfill.
    - Exported non-hazardous soil.
    - Fine graded ¾ inch stone.
    - Installed non-woven geo-textile fabric.
    - Removed, decontaminated, and demobilized all slide rail components.
    - Placed clean backfill material.

    - Compacted clean backfill material.

- December 9, 2024 to December 13, 2024:
    - Imported granular backfill.
    - Exported non-hazardous soil.
    - Fine graded ¾ inch stone.
    - Installed non-woven geo-textile fabric.
    - Removed, decontaminated, and demobilized all slide rail components.
    - Placed clean backfill material.
    - Compacted clean backfill material.

2.2. Continuous Real-Time Fixed Station Monitoring

Continuous real-time fixed station monitoring for TVOCs and PM_{10} was conducted using three air monitoring stations (AMS-2753 through AMS-2755). These stations operated from September 16, 2024 through December 13, 2024. The stations are connected to a data logger and modem. The data is transmitted to a web-based data hosting platform where it is then averaged in 15-minute intervals.

Each air monitoring station consisted of an anchored, weather-tight, enclosure that was secured with a lock. Each station was equipped with a MetOne™ aerosol module to monitor PM_{10} concentrations and a TVOC module to monitor for TVOCs. The components of the Aeroqual system are illustrated on Figure 3. The portable station consisted of an MetOne™ ES-642 aerosol monitor to monitor PM_{10} concentrations and a MiniRAE 3000 Photoionization Detector (PID) to monitor TVOC concentrations. The components of the portable station are illustrated in Figure 4. Each station was calibrated and maintained according to the manufacturer specifications during remedial activities. The electronically recorded data was used to calculate 15-minute average readings for comparison to Action Limits to determine the Site Condition.

2.3. Meteorological Monitoring

A meteorological monitoring station was installed on top of air monitoring station AMS-22753 approximately 10 feet above the ground. The location of the meteorological station is illustrated on Figure 2. The wind direction data were used to determine which real-time monitoring stations were upwind and downwind of Site activities.

2.4. Data Management

The data generated at each real-time fixed air monitoring station location was transferred to a web-based data hosting platform where it could them be translated into Microsoft Excel format for data analysis. Daily air monitoring station data are included in Appendix B. Daily maximum 15 minute averages for the fixed air monitoring stations can be found in Table 1.

2.5. Tripod Mounted Monitoring

Continuous monitoring for TVOCs and PM_{10} (monitoring station AMS-104P) was conducted from September 23, 2024 to December 13, 2024 during working hours. The portable station was installed during working hours each day between the excavation and LIRR parking lot. The tripod mounted station consisted of a weather tight enclosure, tripod, PID and a particulate monitor. The results of the tripod monitoring can be found in Section 3.2 below. Daily maximum 15 minute averages for the tripod mounted monitoring station can be found in Table 2.

3. Results and Discussion

The following section provides a summary of the CAMP monitoring and testing results. Appendix A provides a summary of the maximum 15-minute average TVOC and PM_{10} readings for fixed air monitoring stations AMS-2753 through AMS-2755 and AMS-104P during remedial activities. Weekly CAMP summary reports are provided in Appendix B.

3.1. Fixed Station Monitoring Results

From September 16, 2024, to December 13, 2024, three fixed air monitoring stations continuously tracked TVOCs and PM10. These stations sent data every minute to an online platform. Fifteen-minute average concentrations of TVOC and PM_{10} that were recorded above the Alert Limit (Site Condition 2) and/or Action Limit (Site Condition 3) are detailed below.

There were no 15-minute average concentrations of TVOC that exceeded the Action Limit during the IRM. There was one instance during the IRM where the 15-minute average concentrations of PM_{10} exceeded the Action Limit at the fixed monitoring stations. On Saturday, November 2, 2024, stations AMS-2753 (200 g/m3) and AMS-2755 (204 ug/m3) exceeded the Action Limit for the 15-minute average concentrations of PM_{10}. Both air monitoring stations were located along Oak Street. During the time of the exceedance, there were no activities being performed at the Site. GEI assessed the wind direction to be coming from the Northwest. The impacted material stockpile was covered at the end of the workday on Friday and was located to the south of stations AMS-2753 and 2755. Air monitoring station AMS-2754, located downwind at the time of the exceedance, recorded higher concentrations of PM_{10} than normal, but beneath the Action Limit. Following the single 15-minute average exceedance dust concentrations returned and remained below Action Limits for the remainder of the IRM. This instance was not assessed as a Site Condition 3.

3.2. Tripod Mounted Station Monitoring Results

In addition to the fixed monitoring stations, a portable station (AMS-104P) was used for monitoring TVOCs and PM_{10} from September 23, 2024, to December 13, 2024 during working hours. TVOCs concentrations measured at the portable station remained below the Alert and Action Limits. There were two instances where the 15-minute average concentrations of PM_{10} exceeded the Action Limit at the portable monitoring station, and two additional instances when the 15-minute average concentrations of PM_{10} exceeded the Response Limit but were lower than the Action Limit. The most common activity that occurred during elevated concentrations of PM_{10} was the management of the clean import stone backfill stockpile.

On September 24, 2024, at 8:15am, during the time the air monitoring equipment start up, AMS-104P (200.9 ug/m3) exceeded the applicable Action Limit during this reporting period for PM_{10}. There was no Site activity occurring at the time of this exceedance. GEI assessed the wind direction at the time of the exceedance to be coming from the Northeast. Following the noted exceedance, PM_{10} concentrations

remained below all Alert and Action limits for the remainder of the day. This instance was not assessed as Site Condition 3.

On October 31, 2024, station AMS-104P (266.00 ug/m3) exceeded the Action Limit for the 15-minute average concentrations of PM_{10}, and therefore Site Condition 3 was in effect during this time period. During the time of this exceedance, Posillico was using the loader to manage the imported stone stockpile. Posillico had recently relocated the imported stone stockpile to within the limits of the completed excavation cells in the immediate vicinity of the portable air monitoring station. GEI instructed Posillico to spray water on the stockpile before further movement to reduce particulates. After this adjustment the dust concentrations returned and remained below Action Limits for the remainder of the day.

On November 5, 2024, station AMS-104P (130.90 ug/m3) exceeded the Response Limit for the 15-minute average concentrations of PM_{10}, and therefore Site Condition 2 was in effect during this time period. During the time of this exceedance, Posillico was using the loader to manage the imported stone stockpile. As noted above, Posillico had recently relocated the imported stone stockpile to within the limits of the completed excavation cells in the immediate vicinity of the portable air monitoring station. GEI instructed Posillico to spray water on the stockpile before further movement to reduce particulates. After this adjustment the dust concentrations returned and remained below Response Limits for the remainder of the reporting period.

On Tuesday, December 10, 2024, at 7:45am, station AMS104-P (109.70 ug/m3) exceeded the Response Limit for the 15-minute average concentrations of PM_{10}. The exceedance occurred at the startup of the station prior to commencement of Site activities. No immediate actions were taken by Posillico, and GEI continued to monitor the dust concentrations. Dust concentrations returned and remained below Response Limits for the remainder of the reporting period.

4. Conclusions

The purpose of the CAMP was to provide early detection of potential emissions and associated contingency measures to mitigate human exposure to harmful constituents.

The CAMP successfully documented air quality conditions throughout the excavation and associated remedial activities with no significant data gaps.

Detections of TVOCs remained below the prescribed Alert Limits. Several detections of PM_{10} above the Response Limit or Action Limit occurred at times when the loader was being used to manage the imported stone stockpile. Detections above the Response or Action Limits during work hours most frequently occurred during the management of the stockpile. Appropriate actions were taken by the remedial contractor to mitigate these conditions.

The CAMP implemented by GEI provided an early warning and detection system that allowed on-Site personnel, to prevent and/or mitigate potential off-Site exposures to Site-related contaminants associated with intrusive operations.

5. Limitations

This report was prepared exclusively for the use of National Grid. The conclusions presented in this report are based solely on the information presented in this report and in previous reports prepared for this Site. Additional quantitative information regarding the Site may result in a modification of our findings, herein. This report has been prepared in accordance with generally accepted air monitoring practices. No warranty, expressed or implied, is made.
