2	SITE PERSONNEL: Posillico- Tina Ezratty Campbell Consulting Services- Chris Felice GEI Consultants- Ellie Fiorentino, Russ Morang **Please see attached sign in sheet for additional personnel**			Site Personnel
3	OWNER/INSPECTOR INTERACTIONS: N/A			Owner/Inspector
4	WORK PERFORMED: - Began and completed excavation of cell 41 to ele. 5.3 utilizing slide rail SOE. The bottom of the excavation was surveyed and demarcation barrier was placed. Oil sorbent booms, oil sorbent pads, and simple green were placed in the excavation before the backfill process to remove LNAPL free floating product. Backfill was completed with 3/4" stone to the top of the water table.			Work Performed

NOTES LOG

No.	Comments	08768 - Bid Items	Location.	Note Type
	- NYSDEC collected samples at 9' bgs within the cell. - Loaded out 4 trucks (approximately 100 ton) of soil to CESP via JC Transport. - Posillico Shop sent the boom truck to demobilize 8 totes of odor suppressant and the roll of 20mil HDPE Liner. - Maintained the site with odor control foam and dust suppression.			
5	MISCELLANEOUS SITE NOTES: - As emailed and stated on 10/01/2024, site elevation for top of excavation is being held at ele. 18.3 across the excavation limits. - 10/10/24: direction was given per National Grid and GEI to procure oil booms and oil absorbent pads to remove visible LNAPL free product prior to backfilling. - 10/16/24: Simple Green is able to be used to aid the cleanup of the LNAPL material. - 10/25/24: Close out of the Town of Islip Demolition permit was completed with a final inspection. - 11/07/2024: Stockpile detail provided to NYSDEC via GEI Consultants was not accepted by NYSDEC. NYSDEC required the stockpile area to consist of 20mil HDPE Liner, 6" clean fill, another layer of 20mil HDPE Liner, with a hay bale berm wrapped in 20mil HDPE Liner.

QUANTITY LOG

No.	Cost Code	Location	Units	Quantity
1	2 - Site Preparation		LF	0.0
	Comments:	9/26/24: Installed 130 LF of hay bales along the fence alignment of Oak St interior on the site. Total: 198 LF Silt Fence Total: 240 LF Hay Bales		
2	2 - Site Preparation		CY	0.0
	Comments:	9/30/24: Continued demolition of approximately 120 CY concrete slab and foundation within the excavation limits. Total 438 CY *estimate for production, confirmed by weight tickets*		
3	4 - Well Abandonment		EA	0.0
	Comments:	9/23/24: 11 Monitoring wells were abandoned on site within the property limits.		
4	2 - Site Preparation		EA	0.0
	Comments:	9/23/24: Installation of the truck wash/decontamination pad. 20'x50' (15 CY), 20 mil HDPE liner with 6" oversized stone.		
5	2 - Site Preparation		EA	0.0
	Comments:	9/24/24: Completed 3 test pits and opened the water service manhole to identify the location of utilities in the field to verify if they were cut/capped/decommissioned according to the closeout permits received from GC Environmental.		
6	5 - Excavation		CY	0.0
	Comments:	Total To Date: 3,361.7 CY		
7	6 - Transportation and Disposal: Soil		TON	0.0
	Comments:	Total To date: 5235.28 TON *verified by scale tickets.		
8	10 - Placement of Approved Off- Site Backfill Material - Gravel Fill		CY	0.0
	Comments:	Completed as of 12/06/2024 Total to Date: 2,514.8 CY		
9	3 - Temporary Facilities and Controls		LS	0.0
	Comments:	Stockpile completed 11/11/24 Building of the stockpile area. Material consisted of 20mil HDPE liner, clean fill, hay bales, and waterproof adhesive tapes.		
10	9 - Installation/Removal of the Excavation Support System		LS	0.0
	Comments:	Completed as of 12/05/2024.

NOTES LOG

No.	Comments	08768 - Bid Items Location.	Note Type
	GEI Consultants- Ellie Fiorentino, Russ Morang **Please see attached sign in sheet for additional personnel**		
3	OWNER/INSPECTOR INTERACTIONS: N/A		Owner/Inspector
4	WORK PERFORMED: - Continued placement and compaction of clean fill from PME across the excavation limits. - Compaction testing was complete on site with Amaracon Testing & Inspections of the clean fill. - Posillico Survey was on site to layout the new limits of the stone cap and as built the clean fill that was placed on site. - Removed and restored the decontamination pad with clean fill and 3/4" Stone. - Clean Waters of NY mobilized a tanker truck to pump out 2,479 gallons of impacted water from the FRAC tank - Began demobilizing equipment and materials to prepare for the boom truck tomorrow & Wednesday. Posillico Boom Truck made a delivery of 7 EA 10'x6' fence panels with the feet from Ponderosa Fence, and picked up the empty and full totes to bring pack to the yard. - Shipped 2 loads (~50 tons) of the decontamination pad to CESP via JC Transport - Received 6 loads of clean fill (141.86 Tons) from PME via Cliffside Trucking.		Work Performed
5	MISCELLANEOUS SITE NOTES: - As emailed and stated on 10/01/2024, site elevation for top of excavation is being held at ele. 18.3 across the excavation limits. - 10/10/24: direction was given per National Grid and GEI to procure oil booms and oil absorbent pads to remove visible LNAPL free product prior to backfilling. - 10/16/24: Simple Green is able to be used to aid the cleanup of the LNAPL material. - 10/25/24: Close out of the Town of Islip Demolition permit was completed with a final inspection. - 11/07/2024: Stockpile detail provided to NYSDEC via GEI Consultants was not accepted by NYSDEC. NYSDEC required the stockpile area to consist of 20mil HDPE Liner, 6" clean fill, another layer of 20mil HDPE Liner, with a hay bale berm wrapped in 20mil HDPE Liner.

Also in Attendance:

- None

Safety Minute (Open to All):

- RM discussed working around heavy equipment and MO expanded the discussion to include working around the overhead power lines.
- MO expanded the discussion to include equipment working near power lines. MO mentioned that an incident happened on the OU-4 site during an excavation event in 1999 where a piece of equipment removed power lines from the homes located across the street from the site.

Site Health & Safety Update (Posillico):

- Chris Felice stated work covered 8 days for a total of 64 hours without incident. Chris stated the site is small and we need to be aware of worked positioning as equipment is moving.

GEI Consultants
455 Winding Brook Drive
Suite 2 01
Glastonbury, CT)6033

Work Completed (Posillico)

- TE stated they began mobilization on the 16th and have completed the following: completed site mobilization, installed the temporary fencing, installed the anti-tracking pad/ truck wash, 3 to 4 test-pits, completes concrete slab demo, began concrete footing demo and began mobilization of the slide rail system.
- TE stated they will begin excavation within Cell 1 starting on Monday 9-30-2024
- TE stated the 11 monitoring wells located within the excavation area were decommissioned by ADT on 9/23/2024.

CAMP Update (GEI)

Ellie Fiorentino stated GEI has setup 2 Aeroqual air monitoring stations, 1 Aeroqual air monitoring station with weather, and 1 mobile air monitoring station. All stations report data in real time to onsite GEI personnel and no exceedances for TVOC and PM 10 have occurred above project action levels.
James Sullivan (NYSDOH) will be added to the weekly CAMP data report and to the Weekly Progress call in.

2 Week Look Ahead (Posillico)

TE stated the odor control foamer will arrive either on Friday of this week or Monday of next week. TE is waiting on delivery confirmation.

Open Submittals (GEI/Posillico)

ES stated that he will have a response the SOE Revision submitted by TE.

RFI's (GEI/Posillico)

TE mentioned there was conversation concerning the use of calcium chloride for dust control. MA stated that he would like to know where the calcium chloride comes from and an MSD. TE mentioned ¾" stone could be used but would like to have a conversation if the stone can be left in place.

Old Business (GEI)

TE asked if the pre-construction survey needs to be approved before excavation can begin, ES stated the survey is a formality.
ES asked about using the top of slab elevation from the pre-construction survey as control for consistent depth of excavation. Does the state need the survey to determine if that was acceptable?

New Business (GEI)

GEI Consultants
455 Winding Brook Drive
Suite 2 01
Glastonbury, CT)6033

TE asked who will perform a visual inspection of the last bucket of soil removed from the excavation to determine if excavation is complete. MO stated that GEI will document and photograph the last bucket. GP stated that TG will be onsite and determine if the excavation is complete or must be excavated further. MO also mentioned using boom etc. if sheens are observed below the water table during excavation. GP stated he isn't concerned with sheens but product or grossly impacted material.

Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

X	EF	Ellie Fiorentino	EFiorentino@geiconsultants.com	GEI

Also in Attendance:

- None.

Safety Minute (Open to All):

- Topic of the day is excavation safety. MQ, MP and TE provided comments and expanded the conversation to include working around heavy equipment.
- RM stated that all personnel have stop work authorization if they observe and unsafe activity.

Site Health & Safety Update (Posillico):

- Chris Felice stated work covered 12 days for a total of 96 hours without incident. Chris stated the site is small with added personnel and we need to be aware of worker positioning as equipment is moving

GEI Consultants
455 Winding Brook Drive
Suite 2 01
Glastonbury, CT)6033

Work Completed (Posillico)

- TE stated the loadout of concrete demo debris has been completed, monitoring well abandonment has been completed, and site controls have been installed
- Excavation of Cell 1 has been completed and excavation of Cell 2 will begin. TE also stated cell excavation and backfill will continue for the next few weeks.

CAMP Update (GEI)

- EF stated that an alert showed a 200 mg/cubic meter reading for particulates occurred at AMS-104P located in the northern corner of the site. Upon startup, we received the alert before site activity began and the portable station is located upwind. The increase in concentration unlikely originated from our site and there were no further exceedances.

2 Week Look Ahead (Posillico)

- TE stated continued site activity will consist of excavation and backfill of cells.

Open Submittals (GEI/Posillico)

ES stated that he responded to the SOE Revision submitted by TE. Currently, there are no open submittals.

RFI's (GEI/Posillico)

TE mentioned there was conversation concerning the use of calcium chloride for dust control. MA stated that he would like to know where the calcium chloride comes from and an MSD. TE will provide documentation to MA, but the use of calcium chloride is not a priority because particulates haven't been an issue.

Old Business (GEI)

New Business (GEI)

- TG asked about the protocol for confirming the bottom of excavation. RM stated GEI will photo document the last bucket of soil removed from the bottom of each cell excavation. TG asked about the maximum depth possible in the event grossly contaminated soils were observed in the last bucket. TE stated along the perimeter of the excavation, limited to ~ 1 extra foot of excavation due to the SOE design and would have to confirm on the interior.
- TE asked if the state is ok with using El 18.3' as the starting grade for all cells which we agreed to in the field yesterday. MA stated that he is ok with us using El 18.3' as a starting elevation for cell excavation.
- ES questioned if 18.3' will serve as zero that every cell will be measure from for a 15' cut or where we will go deeper. TE stated that is correct.
- MA asked the team to provide a figure showing the cell layout with excavation depths. TE stated that she will prepare a figure merging the cells with depths after the meeting.

- TE stated that Cells 12, 13, 18 and 19 will all be excavated to a depth of 21 feet and Cell 22 will be excavated to a depth of 19 feet.
- MA stated the use of poly within the excavation isn't necessary, but all excavated soils should be staged close to the cell being excavated and allowed to decant directly back into the cell being excavated. TE stated that a formal stockpile area will be constructed if we run out of room within the excavation area.

Notes

- RM stated the meeting will be recorded.

Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

X	EF	Ellie Fiorentino	EFiorentino@geiconsultants.com	GEI

RM stated the meeting will be recorded

Also in Attendance:

- None.

Safety Minute

- Chris Felice safety minute topic was slips, trips and falls and good housekeeping.

Site Health & Safety Update (Posillico):

- Chris Felice stated Posillico worked a total of 766 hours to date without incident or injury.

Work Completed (Posillico)

- TE stated excavation of Cells 1 through 5 and Cell 10 have been completed. Currently, Cell 9 is being excavated and should be completed by the end of the day. After Cell 6 located in the 2nd row has been completed, activity will shift to Cell 11.
- TE stated all cells that were excavated have been backfilled with stone. Activity will continue until cells are complete probably for the next 6 ½ to 7 weeks.

CAMP Update (GEI)

- EF stated no exceedances for TVOC's or particulates were measured.
- RM stated we will provide vibration monitoring data beginning next week.

2 Week Look Ahead (Posillico)

- TE stated 10 more cells should be completed in the next two weeks.
- TE stated by the end of next week, excavation should be at Cell 15 depending on how fast the deeper cells will go. All cells should be backfilled to the water table.

Open Submittals (GEI/Posillico)

- ES stated he had received the utility clearance survey and will look at that by the end of the week. ES asked if this would impact their schedule, TE stated this will not impact schedule.

RFI's (GEI/Posillico)

- No open RFI's

Old Business (GEI)

- No old business

New Business (GEI)

- RM stated GEI will collect samples for BTEX, PAH's and visual inspection to supplement the PDI investigation. TE stated site prep may need to be done depending on sample location. RM stated samples will be collected with a GeoProbe rig and I plan for the work to be completed on a Saturday. TE asked that GEI layout the sample locations the day before so the site can be prepped. ES stated we have the sample locations well defined and can show the sample locations after the call. TE asked if the sample locations must be surveyed. MQ stated no but they need to be as close as possible to the excavation with the exception the south side near PDI-14 which will be 10 feet off since the boxes are 12' x 12'. TE stated the boxes in that location are 8' x 8' but there is a potential to extend the box 12' to the south. TE stated that for disposal purposes, she will need waste class data and 1 sample should cover the sufficient based on a 12' x 12'. TE asked about the anticipated depth of the cell. MA stated the depth of the NAPL was between 8.5' and 9.5' probably digging to 15 feet. TG asked when the borings could possibly start. CM stated the drillers are available any Saturday and may be available this Saturday, if not next. RM stated the earlier the better. MQ stated to check working hours with the village. TE stated if your under a consent the hours are 8:00 until 4:00.

Notes

- Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

RM stated the meeting will be recorded

Also in Attendance:

- None.

Safety Minute

- Chris Felice safety minute topic was good housekeeping.

Site Health & Safety Update (Posillico):

- Chris Felice stated Posillico worked a total of 1035 man hours to date without incident or injury.

Work Completed (Posillico)

- TE stated excavation of Cells 9 through 6 have been completed during the past week and finished excavation of Cell 11 on Monday. Currently, Posillico is bottoming out at Cell 12 today.

CAMP Update (GEI)

- EF stated no exceedances for TVOC's or particulates were measured.
- EF stated no exceedances for vibration monitoring were measured.

2 Week Look Ahead (Posillico)

- TE stated Posillico will continue excavating the cells in the sequential order shown on the drawings for the next two weeks. Today we are on Cell 12 and should potentially get to Cell number's 18 to 20 depending on how well things go with the deeper excavations that are coming up. To refresh everyone's memory, Cells 12 and 13 are the 21-foot excavations to elevation -2.7. Cells 14 and 15 will be 15-foot excavations to elevation 3.3. Cells 16 and 17 will be 15-foot excavations to elevation 3.3 and Cells 18 and 19 will be 21-foot excavations.

Open Submittals (GEI/Posillico)

- ES stated he had received the utility clearance survey and submitted a response to TE.

RFI's (GEI/Posillico)

- No open RFI's

Old Business (GEI)

- No old business

New Business (GEI)

- RM stated GEI did supplemental sampling over the weekend to supplement the PDI investigation. RM stated that GEI should have the lab data by the end of the week and will be shared with the team at that time. RM stated that he has received the boring logs and will go over them this afternoon or tomorrow. MA asked RM when he would send over the boring logs. RM stated he will send over the boring logs to MA by the end of the week. RM asked MA if he received the pictures showing the last bucket of soil from Cell 11. MA stated the had received the pictures. MA stated he was disappointed that the driller packed up and left on Saturday. RM stated he directed the driller to unload the Geoprobe and continue sampling. MA asked if GEI felt they were able to get to the edge of the NAPL on the South side of the excavation. RM stated that GEI was able to get to the edge of the NAPL on the South side of the excavation on Saturday, and they will have the lab data soon to back up the findings.
- ES stated that he briefly looked at the boring logs and did not come across any visual impacts. ES stated there were some odors in pretty much all of the borings, but there was not gross contamination in any of the locations. CM asked who the driller was on Saturday. RM stated it the drilling company was Coastal.
- MA asked if Posillico would finish up Cell 12 by the end of the day. TE stated Posillico would finish Cell 12 by the end of the day. MA asked if Posillico was going to start Cell 13 today. TE stated that starting Cell 13 is time dependent. TE stated that the last 2.5 feet of the excavation in Cell 12 has been difficult because of washout from the bucket. MA asked if they were seeing any sheen on the water or if there is product. TE stated they are seeing mostly sheen, but better than what they have encountered previously. TE stated the material that Posillico is pulling up does not look impacted. RM stated he hasn't seen any NAPL floating in the cell either. RM stated the material was very clean.

Notes

- Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

RM stated the meeting will be recorded

Also in Attendance:

- None

Safety Minute

- Chris Felice safety minute topic was the proper use of fire extinguishers

Site Health & Safety Update (Posillico):

- Chris Felice stated Posillico worked a total of 1,301-man hours to date without incident or injury.

Work Completed (Posillico)

- TE stated that Cells 13, 14, 15 and 20 have been excavated this week. Cell 19 will be bottomed out today at Elevation -2.7. The demarcation barrier will be installed, the NAPL will be cleaned out and backfill will be completed by the end of the day.

CAMP Update (GEI)

- EF stated no exceedances for TVOC's or particulates were measured.
- EF stated no exceedances for vibration monitoring were measured. TE asked if we received any notifications. EF stated we have received hits. RM stated we have received hits from the VM's but the hits were below the established project action levels.
- BR stated "Tom" had walked to the site and asked about vibration but didn't leave his address or phone number. RM stated I walked along Oak Street from the site entrance towards the area where the neighbor possibly lives, and the vibrations were barely noticeable. BR stated a complaint hasn't been filed with the project hotline. MA asked when was the complaint? RM stated the initial complaint was last Friday. RM stated a neighbor entered the site and mentioned he had felt vibration. The gentleman was provided with the hotline number but hasn't filed a complaint.

2-Week Look Ahead (Posillico)

- TE stated we are going to be doing the same activities we are doing every day. TE stated next week we can potentially be between Cell 30 and 28. TE Stated tomorrow we will have deeper excavation in Cell 18 and probably next Wednesday, we will be doing the last of the deeper excavations in Cell 22 which is a 19' excavation to El -0.7.
- ES asked if we are still on schedule for an early December completion. TE stated yes.

Open Submittals (GEI/Posillico)

- None

RFI's (GEI/Posillico)

- None

Old Business (GEI)

- None

New Business (GEI)

- RM stated we are reviewing the lab data and working on the additional boring logs for the drilling we completed on Monday. RM stated when the files are ready, the info will be available to the team. MA asked when the information will be available. ES stated the boring logs should be ready on Friday and he is working on the summary letter this afternoon.
- ES asked if we collected analytical data on Monday as well. CM stated yes and the samples have been submitted to the lab. MA asked if GEI has received the analytical from the initial samples. ES stated that we can send the analytical data that we have. MA asked if there are any exceedances. ES stated there were no exceedances and the data will be sent after the call.
- BR stated that he wants to touch on safety. BR thanks everyone onsite for doing a good job with safety but were always looking to improve. BR reminded everyone they must sign in and sign out on the logs each day and we shouldn't use cell phones within the work zone. BR reminded everyone to speak up if they see someone not following the rules because National Grid has a policy about speaking up and please have current training certifications onsite.
- JS asked from a health perspective how the site is secured at night. TE stated every night the gate is secured with a combination lock and a security guard is onsite inside the property from 3:00 pm until 7:00 am the following morning.

Notes

- Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

X	EF	Ellie Fiorentino	EFiorentino@geiconsultants.com	GEI

RM stated the meeting will be recorded

Also in Attendance:

- None

Safety Minute

- Chris Felice safety minute topic was an overview of worker safety on the project. CF stated he is satisfied with the way work related activities have been going in terms of the labor force and field activities.

Site Health & Safety Update (Posillico):

- Chris Felice stated Posillico worked a total of 1,467-man hours to date without incident or injury.

Work Completed (Posillico)

- TE stated work has been completed through Cell 21 with the addition of Cell 22 to a depth of 19 feet which will be completed this afternoon. Last week, Cell 15 through Cell 20 were completed.

CAMP Update (GEI)

- EF stated no exceedances for TVOC's or particulates were measured.
- EF stated no exceedances for vibration monitoring were measured.

2-Week Look Ahead (Posillico)

- TE stated the two-week look ahead looks the same until the last week of November. Excavation could potentially be finished during the last week of Thanksgiving.

Open Submittals (GEI/Posillico)

- None

RFI's (GEI/Posillico)

- None

Old Business (GEI)

- RM asked MA if he had received the lab data package for the supplemental borings. MA stated he had received the date package. MA stated that he will review the data but hasn't had a chance. RM asked if MA needed any other information. MA stated not at this time.

New Business (GEI)

- MQ asked if Posillico will work on Veterans Day. TE stated Posillico doesn't observe the holiday, and the crew will work. RM stated GEI doesn't observe the holiday and plans to work.
- MP stated Posillico will not work on Thanksgiving or the day after.
- RM presented a Power Point slideshow containing 12 photos highlighting site activity from slide rail installation through truck decontamination. RM stated he will answer questions as they were raised.

Notes

- Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

RM stated the meeting will be recorded

Also in Attendance:

- None

Safety Minute

- Chris Felice safety minute topic was ladder safety.

Site Health & Safety Update (Posillico):

- Chris Felice stated Posillico worked a total of 1,647-man hours to date without incident or injury.

GEI Consultants
455 Winding Brook Drive
Suite 201
Glastonbury, CT 06033

Work Completed (Posillico)

- TE stated Cells 20 through 25 have been completed and are currently working on Cell 29. TE stated Cell 30 had been completed yesterday.

CAMP Update (GEI)

- On Thursday 10/31 the portable air monitoring station located in the north corner of the Site detected dust concentrations at 266 ug/m3. The station had issues with connection to the server around the time of the exceedance, and therefore we were not notified in real time of the issue. following the exceedance, PM-10 concentrations reduced to under response and action levels for the remainder of the reporting period. Site activities at the time of the exceedance included delivery and movement of import stone and excavation of cell 23. The import stone stockpile had been recently relocated to within the completed excavation footprint approximately 15ft from the portable station. GEI has since requested that Posillico apply water to the import stockpile to suppress dust.
- On Saturday 11/2 the two air monitoring stations located along Oak Street recorded PM-10 concentrations above the Action Limits. No remedial activities were being performed at the time and the impacted material stockpile had been covered on Friday before the weekend. The wind direction at the time of the event, from the northwest, indicates that the dust likely originated off Site. The PM-10 concentration at the downwind station was higher than normal 15-minute averages, but lower than both the response and action limits.
- lastly, the Vibration monitors had no exceedances.

2-Week Look Ahead (Posillico)

- TE stated Cell 26 through Cell 35 will hopefully be excavated over the next two weeks with one day to build the stockpile. We are targeting either beginning the stockpile today or tomorrow.

Open Submittals (GEI/Posillico)

- None

RFI's (GEI/Posillico)

- None

Old Business (GEI)

- None

New Business (GEI)

- MA asked if there were any more issues with the surrounding property owners regarding vibration issues. MQ stated that a few calls were made to the hotline that are being followed up with. One gentleman who made a complaint is leaving for Florida tomorrow and will return in one month, so we'll follow up when he returns.
- ES stated we had a hit at 08:00 on the portable air station this morning which is above the alert limit but below the response limit. This was the first reporting period of the day at the same time Posillico was moving stone in the stockpile close to the CAMP station. At this point, we are looking into if there is an issue with the station or if the stockpile should be wetted.
- MA asked if we could forward a plan for the stockpile details. RM stated the plan will be shown after a quick photo presentation documenting the previous weeks activities.
- MP asked if there was any luck with contacting Greg about moving his truck because the stockpile is going to be built. MQ stated BR followed up with him.
- RM presented a Power Point slideshow containing photos highlighting site activity from the past week.
- RM stated he will now open a detail prepared by TE showing the stockpile details. TE provided details of the

stockpile GP asked if the base of the stockpile will be graded to drain back into the excavation area. TE stated the stockpile will be graded to drain back into the excavation area. MA asked if we would put gravel under the liner. TE stated we will grade the existing material. MA asked if I could send him a copy of the stockpile detail. RM stated that he will send the stockpile detail after the project meeting. JS asked if the black boundary shown on the stockpile detail is still on the property or offsite. TE stated the black boundary line is the excavation extent located onsite and not the site boundary. GP stated he assumes the liner is seamless under the stockpile. RM stated that is correct. MA asked if we would replace the liner each time after truck loadout. TE stated the liner will be replaced if wear or damage is observed. MP stated we will leave a couple of feet of stockpile material above grade and not dig into it until the last load is removed. RM stated a gravel layer on top of the liner could cause punctures to the liner. GP asked if there any precautions with the type of bucket used for loading out the material. TE stated we use a 5-foot bucket with teeth, but as we stated previously, we will leave a barrier of stockpiled material above the liner and not hit the liner until the last truck is loaded. TE stated using a flat cutting-edge bucket that does not have teeth would probably cause more damage to the liner than the bucket with teeth.

Notes

- Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

RM stated the meeting will be recorded

Also in Attendance:

- None

Safety Minute

- Chris Felice safety minute topic was the proper use of cell phones while onsite.

Site Health & Safety Update (Posillico):

- Chris Felice stated Posillico worked a total of 1,911-man hours to date without incident or injury.

Work Completed (Posillico)

- TE stated in the last week, Cell 30 through Cell 26 have been completed. Today, Cell 31 has been started which is an 8' x 8' cell and we are on the last full row of 5 cells.

CAMP Update (GEI)

- EF stated on Tuesday, November 5 at 8am GEI received a Response Limit alert for PM-10 at the downwind monitoring station (AIR-104P) located in the north corner of the Site. The 15-minute average detection of the PM-10 was 130.9 ug/m3 and following the exceedance, PM-10 concentrations reduced to under the response level. Site activities at the time of the exceedance were limited to movement of import stone in the vicinity of the station. GEI instructed Posillico to spray water on the stockpile before further movement to reduce particulates.

2-Week Look Ahead (Posillico)

- TE stated over the next two weeks, Posillico will be excavating Cell 31 through Cell 38. We should finish Cell 31 today and then the adjacent Cell 38 tomorrow which completes the 8' x 8' cells. TE stated that contract excavation should be completed by Thanksgiving and if there are additional cells, they will be completed after Thanksgiving.

Open Submittals (GEI/Posillico)

- None

RFI's (GEI/Posillico)

- None

Old Business (GEI)

- None

New Business (GEI)

- RM presented a photo slideshow containing photos highlighting site activity from the past week. The photos showed the last buckets of soil from Cell 27 and Cell 28 used to determine if the cell has been excavated to the satisfaction of the NYSDEC or if further excavation is required. The remaining photos documented the installation process of the stockpile.

Notes

- Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

Progress Meeting Agenda
National Grid
Bayshore/ Brightwaters Former MGP
Operable Unit- 4 Oak Street Excavation

Project:	22 Oak Street Soil Excavation IRM	**Meeting Date:**	November 20, 2024

RM stated the meeting will be recorded

Also in Attendance:

- None

Safety Minute

- Chris Felice safety minute topic was the dangers of complacency while onsite.

Site Health & Safety Update (Posillico):

- Chris Felice stated Posillico worked a total of 2,225-man hours to date without incident or injury.

GEI Consultants
455 Winding Brook Drive
Suite 201
Glastonbury, CT 06033

Work Completed (Posillico)

- TE stated excavation of Cells 31, 38, 32, 37 and 33 have been completed.

CAMP Update (GEI)

- EF stated we experienced no exceedances of PM10 or VOCs. On November 12 at 9:00am, VM2 which is the vibration monitor near the railroad had an exceedance. GEI asked Posillico to adjust work practice accordingly. There were no further exceedances during this reporting period.

2-Week Look Ahead (Posillico)

- TE stated they will finish excavating Cells 36, 34 and 35 this week. Next week will be a short 3-day work week due to the Thanksgiving Holiday. One day next week, the stockpile will be reconfigured to make room for the soils generated during excavation of the three additional cells, 39, 40 and 41. One day, probably Tuesday, one of the additional cells will be excavated. The day before Thanksgiving, we will be working on site grading, leveling and prepping the site where backfill has been placed. During the following week, excavation of the additional cells will be completed by Tuesday. The rest of the week will consist of grading the ¾" stone backfill across the site, placing the geo-textile fabric and placing and grading the clean backfill material.
- TG asked if they will excavate one of the additional cells next week and will that take place on Tuesday. TE stated the cell will be excavated on Tuesday or Wednesday but depends on completing cells 36, 34 and 35 this week due to heavy rain forecasted for Thursday. MA asked which additional cell will be excavated next week. TE stated Cell 39, and she will have a better idea which day the cell will be excavated on Friday of this week.

Open Submittals (GEI/Posillico)

- None

RFI's (GEI/Posillico)

- None

Old Business (GEI)

- None

New Business (GEI)

- RM presented a photo slideshow containing photos highlighting site activity from the past week. The photos showed the last buckets of soil from Cell 32, Cell 33 and Cell 38 used to determine if the cell has been excavated to the satisfaction of the NYSDEC or if further excavation is required. Remaining photos documented the installation of the slide rail system for Cell 36 and 37, current site conditions and NAPL removed from Cell 38 before installation of the demarcation barrier a d placement of backfill in cell 38.
- RM asked the team to provide feedback concerning the project meeting agenda for 11/27/2024. MA stated an email summary sent to the team would be better due to the holiday and BR agreed. There was no additional feedback from other team members. RM stated he will provide an email summary of the week's activities to the tea on 11/27/2024.

Notes

- Subsequent meetings will be held on Wednesday's at 11:00 via Microsoft Teams.

Appendix H GEI Daily Reports and Photographic Log

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Monday September 16, 2024
Client:	National Grid	**Page:**	Page 1 of 7
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Time of Arrival: 6:30 a.m. **Departure:** 15:30 p.m.
Weather: **AM** 64° F, partly sunny, calm **PM** 76° F, sunny, humid

Persons Contacted, Company
Tina Ezratty (Project Engineer).
Mike Quinlan (NG PM)

GEI Representative(s)
Russ Morang CM
Ellie Florentino (CAMP)

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Chris Felice (Superintendent).
- Eugene Haas (Foreman)
- Alex Riveria (Laborer)
- Chuck Rocco (E/O)
- Chris Felice (Site Safety)
- Kelly Weyer (Clean Globe Environmental)
- Mike Quinlan (National Grid).

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 245 Excavator with hydraulic hammer and bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **One Conex box**
- **Security guard booth**

Posillico Inc completed the following:

- Mobilized the following equipment to the site: John Deere 744 loader, John Deere 245 Excavator, two site 32’ x 8’ trailers, two generator’s, one Connex box and one security guard booth, porto-lets with stations
- Clean Globe Environmental (Poscillico sub) marked out site utilities using GPR and locator methods.
- Chris Felice conducted an AM tailgate briefing covering HASP review.

- **Notes:** None

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 Excavation and completed a daily inspection report.
2. Russ M and Ellie Fiorentino received delivery of three Aeroqual CAMP stations one with weather capabilities and brought one Instantel vibration monitor. Monitoring for particulates, VOC's and vibration will not begin today because we are unsure where instrumentation placement will occur. Poscillico will organize all mobilized equipment to make room for installation.
3. Spoke with Mike Quinlan (National Grid), Tina Ezratty (Poscillico) and discussed project expectations.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Tuesday September 17, 2024
Client:	National Grid	**Page:**	Page 1 of 6
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Time of Arrival: 7:00 a.m. **Departure:** 15:30 p.m.
Weather: **AM** 62° F, cloudy, calm **PM** 74° F, sunny, humid

Persons Contacted, Company
Tina Ezratty (Project Engineer).

GEI Representative(s)
Russ Morang CM
Ellie Florentino (CAMP)

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Chris Felice (Superintendent).
- Eugene Haas (Foreman)
- Alex Riveria (Laborer)
- Chuck Rocco (E/O)
- Chris Felice (Site Safety)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 245 Excavator with hydraulic hammer and bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**

Posillico Inc completed the following:

- Mobilized the following equipment, straw-bales for E&S controls, two roll-off containers and one roll of non-woven filter fabric.
- Mobilized a survey crew for layout of the excavation area to include sections added recently by GEI.
- Rearranged the site to allow installation of CAMP equipment at locations chosen by GEI personnel.
- Chris Felice conducted an AM tailgate briefing covering Material Handling.

FIELD OBSERVATION REPORT

- **Notes:** After survey completed lay-out of the excavation area, Tina Ezratty approached me and stated the excavation extends approximately 3 feet into the LIRR property and asked if there was an easement for us to complete excavation or simply stop at the property boundary. I spoke with Eric who reached out to National Grid for confirmation of an easement. Per Tina, the concrete curbing is the property boundary

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 Excavation and completed a daily inspection report after leaving the site.
2. Russ M and Ellie Fiorentino completed setup and installation of three Aeroqual and one Instantel monitoring stations. See attached CAMP location map for installation locations. GEI began monitoring at all four equipment locations. I contacted Chris Gordon and asked him to setup the alert system and check to make sure the server is receiving all data files,

Photos

Weather: **AM** 67° F, cloudy, calm **PM** 78° F, mostly sunny, humid

Persons Contacted, Company
Tina Ezratty (Project Engineer).

GEI Representative(s)
Russ Morang CM
Ellie Florentino (CAMP)

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Eugene Haas (Superintendent)
- Alex Riveria (Laborer)
- Chuck Rocco (E/O)
- Chris Felice (Site Safety)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 245 Excavator with hydraulic hammer and bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**

Posillico Inc completed the following:

- Mobilized concrete jersey barriers, and poly barrels and barriers.
- Established the contaminant reduction and exclusion zones and installed the concrete jersey barriers along Oak Street from the site entrance to the LIRR parking area.
- Began limited demolition of the concrete slab.
- Chris Felice conducted an AM tailgate briefing.

- **Notes:** None

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Wednesday September 18, 2024
Client:	National Grid	**Page:**	Page 2 of 5
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 Excavation and completed a daily inspection report after leaving the site.
2. Russ M and Ellie Fiorentino resumed monitoring at all four equipment locations. At the end of the day, a decision was made to keep all instrumentation running continuously. Russ M and Ellie F obtained voltage readings at all 4 instrumentation locations to determine if the batter capacity is sufficient throughout the night.

Time of Arrival: 7:30 a.m. **Departure:** 15:30 p.m.
Weather: **AM** 68° F, cloudy, breezy **PM** 79° F, mostly sunny, humid

Persons Contacted, Company
Tina Ezratty (Project Engineer).
Bill Ryan (National Grid)
Mike Quinlan (National Grid)

GEI Representative(s)
Russ Morang CM
Ellie Florentino (CAMP)

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Eugene Haas (Superintendent).
- Eugene Haas
- Alex Riveria (Laborer)
- Chuck Rocco (E/O)
- Chris Felice (Site Safety)

2. Site Visitors

- Tracey Garland (NYSDEC)
- Bill Ryan (National Grid)
- Mike Quinlan (National Grid)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 245 Excavator with hydraulic hammer and bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**

Posillico Inc completed the following:

- Mobilized the following equipment, temporary fencing, water filled poly barriers, odor suppressant foam and privacy screen.

- Removed a portion of the temporary fence previously installed for building demo.
- Began Installation of new temporary fencing, privacy screen and water filled poly barriers from the Northern corner of the property to the masonry wall located on town property.
- Mobilized a survey crew and located all onsite monitoring wells scheduled for decommissioning.
- Mobilized an electrical contractor who provided power to the site trailers.
- Chris Felice conducted an AM tailgate briefing covering working around heavy equipment.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 Excavation and completed a daily inspection report.
2. GEI is continuing with site air monitoring using three Aeroqual and one Instantel monitoring stations. I contacted Chris Gordon, and the real time alert system is up and running and the server is receiving all data files. All stations will continuously collect data.
3. I spoke with Bill Ryan (National Grid) and Mike Quinlan (National Grid) and updated them on site activities and conditions. I showed Mike where the survey lay-out of the excavation area extends approximately 3 feet into town property and asked if there was an easement for us to complete excavation or simply stop at the property boundary. Mike thought there is an easement and excavation shouldn't be an issue but will follow-up with communication to GEI.
4. I had a conversation with Mike Quinlan and addressed his concerns that we have only three CAMP stations onsite leaving the northern corner of the site without. Because this area is within the footprint of excavation and backfill, I recommended a fourth portable station being used on town property during work hours only and removed at the end of each shift. Mikw agreed and I contacted Chris Gordon and asked him to prepare a portable station that I will pick up on Friday night.
5. I met with Tracey Garland (NYSDEC) who will be the full time onsite NYSDEC rep. I walked him through the full set of plans for him to get an understanding of what will be done from CAMP, site engineering controls through excavation and backfill procedures. I also showed him each of the instrumentation locations and stated GEI will receive real time alerts which we will immediately compare to the projects action levels and provide direction to the contractor as necessary.
6. I spoke with Mike Quinlan (National Grid) and Tina Ezratty (Project engineer) concerning the 21-foot-deep excavation area. According to the Tina, the 21-foot-deep excavation area will fall into a portion of four cells and proposed excavating all four cells to 21 feet. This will change the excavation and backfill quantities which will be covered by GEI who added 20% to the quantities in case a problem like this arose. Any reconfiguration of the slide rail system will cause delays which will ultimately cause greater costs than the proposed method. All three of us agreed that excavation of the four cells to 21 feet would save time and money. Mike Quinlan will make the final decision.
7. I spoke with Tina who mentioned one of the offsite monitoring wells WCMW-301 (part 3 well cluster) may be damaged during excavation and asked if she could have the well decommissioned. I spoke with Eric who said these wells are part of ongoing sampling and this will cause a major problem. See attached picture of well location.
8. The property owner needs site access

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 245 Excavator with hydraulic hammer and bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Sixteen totes containing odor suppressant foam**

Posillico Inc completed the following:

- Mobilized the following equipment, one load of temporary fencing, and 8 totes containing odor suppressant foam
- Removed the remaining temporary fence previously installed for building demo.
- Resumed Installation of new temporary fencing along Oak Street from the Northern corner of

the property to the site entrance gate.

- Resumed demolition of the concrete slab and dust control. All concrete remained within the limits of demolition.
- Began installation of silt fence (~80 LF) beginning at the masonry retaining wall located on town property toward Oak Street.
- Chris Felice conducted an AM tailgate briefing covering working around heavy equipment.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 Excavation and completed a daily inspection report.
2. GEI is continuing with site air monitoring using three Aeroqual and one Instantel monitoring stations. I contacted Chris Gordon, and the real time alert system is up and running and the server is receiving all data files. All stations will continuously collect data.
3. Russ Morang arrived onsite at 04:30 hours to allow site access for the property owner. Posillico does not want to give the gate combination to the property owner.

- None

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 245 Excavator with hydraulic hammer and bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Sixteen totes containing odor suppressant foam**

Posillico Inc completed the following:

- Received one load of 2” stone for installation of the anti-tracking pad.
- Installed the anti-tracking pad at the site entrance. Instead of using non-woven Geotextile fabric, a 20-mil poly liner and a sump were installed to be used as the equipment decon pad.
- Completed Installation of new temporary fencing along Oak Street from the Northern corner of

the property to the site entrance gate to include privacy screen.

- Completed demolition of the concrete slab and continued with dust control. All concrete remained within the limits of demolition.
- Completed installation of silt fence from the masonry retaining wall to the north corner of the site and installed straw bales from the north corner to the site entrance gate along Oak Street.
- ADT completed decommissioning of the 11 onsite WCMW series wells (234 LF) located within the limit of excavation. All wells were decommissioned by the addition of grout to each location.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 Excavation and completed a daily inspection report.
2. GEI is continuing with site air monitoring using three Aeroqual and one Instantel monitoring stations. I contacted Chris Gordon, and the real time alert system is up and running and the server is receiving all data files. All stations will continuously collect data.
3. At the request of National Grid, a portable air monitoring station was installed at the north corner of the site. This station will also provide real time alerts to onsite GEI personnel.
4. Spoke with Tina Ezratty, who mentioned that the excavation plan will be changed due to equipment availability. I asked Tine to submit an SOE excavation design revision to GEI for approval.
5. Spoke with Tina Ezratty who mentioned the slab concrete exceeded the 6” thickness outlined in the contract documents and said she will submit a change order. The concrete thickness was up to 10” measured by myself and I agreed to 4 hours for the excavator/ operator and one laborer.
6. I spoke with Tina Ezratty and mentioned WCMW-30I is being used for groundwater monitoring and cannot be demolished (located on town property) without prior permission from the NYSDEC. Tina said that she will protect the well during excavation activities.

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Eugene Haas (Superintendent).
- Alex Riveria (Laborer)
- Chuck Rocco (E/O)
- Teddy Harris (Laborer)
- Anthony Benjamin (laborer)
- Chris Felice (Site Safety)

2. Site Visitors
- None

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 245 Excavator with hydraulic hammer and bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Sixteen totes containing odor suppressant foam**

FIELD OBSERVATION REPORT

Project: Bayshore Former MGP Site
Operable Unit 4, 22 Oak Street
Client: National Grid
Contractor: Posillico Inc.

Field Date: Tuesday September 24, 2024

GEI Proj. No. 093180-4.1422

Posillico Inc completed the following:

- Received three loads' of 3/4" stone to be used as backfill during excavation.

Load #	Trucking Company	Truck #	Registration	State	Tonnage
1	Red Rock Precast	7	91556 - NC	New York	TBD
2	Red Rock Precast	7	91556 - NC	New York	TBD
3	Red Rock Precast	7	91556 - NC	New York	TBD

- Began load-out of the concrete slab debris to an offsite recycling facility. Six loads were shipped to the offsite facility for recycle and Posillico will provide tickets as soon as they become available.

Load #	Trucking Company	Truck #	Registration	State	Volume
1	Red Rock Precast	7	91556 - NC	New York	18 CY
2	Red Rock Precast	7	91556 - NC	New York	18 CY
3	Red Rock Precast	7	91556 - NC	New York	18 CY
4	Red Rock Precast	7	91556 - NC	New York	18 CY
5	Red Rock Precast	7	91556 - NC	New York	18 CY
6	Red Rock Precast	7	91556 - NC	New York	18 CY

- Excavated two test pits to a depth of 5 feet below grade along Oak Street within the limits of excavation to determine depth to water and to locate the gas and water services to the site. The gas and water services were located, and ground water was not encountered.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring

station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7 and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

3. Russ M and Ellie F moved VM-1 to new a new location. Refer to the attached site location figure for new location.
4. Spoke with Tina Ezratty who mentioned the slab concrete exceeded the 6" thickness outlined in the contract documents and said she will submit a change order. The concrete thickness was up to 10" measured by myself and I agreed to 4 hours for the excavator/ operator and one laborer.

- **Slide rail (mobilization began)**

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

- During the AM tailgate safety briefing Tina stated the rental company may not be able to dispatch a mechanic to repair the excavator and instead may switch the excavator. Currently, concrete footing demolition can't resume.
- Received a load of haybales which were installed from the site gate to the fence along the LIRR encompassing the excavation area instead of the entire site. This change to the site E&S was authorized by Tracey Garland (NYSDEC) after a conversation with Russ M. Refer to the attached site figure for details.
- Began mobilization of slide rail components.
- At approximately 1300, a mechanic was dispatched to the site and repaired the excavator. Posillico resumed demolition of the former building footings.
- At approximately 13:30, the John deere 245 excavator was repaired and footing demolition resumed. NOTE: Due to mechanical repairs and site activity, footing demo was limited to approximately 2 hours. The footings were removed and sized with little effort.
- Chris Felice conducted an AM tailgate briefing covering dangers of site traffic

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI hosted Week 1 Progress meeting and completed meeting minutes.
3. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

- **Two roll-off containers**
- **Sixteen totes containing odor suppressant foam**
- **Slide rail (mobilization began)**

Posillico Inc completed the following:

.

- Resumed mobilization of slide rail components.
- Mobilized a foamer for odor suppression during cell excavation.
- Posillico's surveyor setup the Trimble which will be used with the excavator to ensure each cell was excavated to depth.
- At approximately 12:20, concrete footing demolition resumed and at 14:00, concrete footing demolition was completed for the day.
- Chris Felice conducted an AM tailgate briefing covering dangers of site traffic
- Resumed load-out of the concrete slab debris to an offsite recycling facility. Six loads were shipped to Construx in Lindenhurst NY for recycle. Posillico will provide tickets as soon as they become available.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Tuesday October 1, 2024
Client:	National Grid	**Page:**	Page 2 of 6
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed installation of the slide rail system in Cell 1.
- Began excavation of Cell 1 which consisted of ¾" stone with sheens with a light MGP like odor. Ground water with sheens was encountered at approximately 6 feet below grade. Due to light MGP like odors, foam was applied to the stockpiled material.
- Tracey Garland (NYSDEC) directed Posillico to install a poly liner and berm within the contaminated area due to his interpretation of Posillico's Site Operations Plan for all excavated material. During excavation/ stockpiling, Tracey was concerned that water from the material was draining from the stockpile back to Cell 1.
- Chris Felice conducted an AM tailgate briefing covering use of tag lines.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Mike Quinlan, Russ M and Tina Ezratty spoke with Tracey and stated Posillico's Site Operations Plan mentioned installation of a liner, berms and water collection if a stockpile was created outside of the limits of excavation. We also mentioned there is no way to stop the water flow back to Cell 1 because the material must decant. Tracey mentioned that he would speak with his supervisor and recommend that liner not be used.
3. Mike Quinlan, Tina Ezratty and Russ M spoke with Tracey Garland concerning the starting elevation for the IRM design limits at 18.3'. Tracey Garland spoke with his supervisor and later said he is good with a starting elevation of 18.6'. This issue may be discussed at tomorrow's weekly meeting.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

- **Sixteen totes containing odor suppressant foam**
- **Slide rail (mobilization began)**

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed excavation of Cell 1 to approx. Elevation 3.3 feet (15' cut). After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to a light MGP and PLO like odors.
- Completed installation of the slide rail system for Cell 2. After the slide rail system was installed, excavation began which consisted of ¾" stone with sheens and MGP and PLO like odors. During excavation, odor suppressant foam was applied due to a light MGP and PLO like odors.
- Shipped 6 loads of soils from Cell 1 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Received one load of ¾" stone and four loads of common fill from Posillico Materials.
- Chris Felice conducted an AM tailgate briefing covering use of tag lines.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI hosted the progress meeting. During the meeting we discussed the continued use of poly within the area of excavation and a starting Elevation for excavation. During the meeting Matt Ayers (NYSDEC) stated that he is ok with us using El 18.3' as a starting elevation for cell excavation. Matt Ayers also stated the use of poly within the excavation isn't necessary, but all excavated soils should be staged close to the cell being excavated and allowed to decant directly back into the cell being excavated.
3. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 1 to determine if excavation has been completed. Tracey and I saw sheens with a light PLO and MGP like odors because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 1 excavation has been completed.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, two Instantel vibration monitoring stations are being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and two Instantel vibration monitoring stations are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

.

- Completed excavation of Cell 2 to approx. Elevation 3.3 feet (15’ cut). After the excavation was

completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to a light MGP and PLO like odors.

- Completed installation of the slide rail system for Cell 3. After the slide rail system was installed, excavation of Cell 3 was completed to approx. Elevation 3.3 feet (15' cut). After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to a light MGP and PLO like odors.
- Shipped 4 loads of soils from Cell 2 and Cell 3 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final buckets of soil from Cells 2 and 3 to determine if excavation has been completed. Tracey and I saw sheens with a light PLO and MGP like odors because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 2 and Cell 3 excavation has been completed to the satisfaction of NYSDEC.
3. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

GEI Consultants

FIELD OBSERVATION REPORT

Project: Bayshore Former MGP Site
Operable Unit 4, 22 Oak Street
Client: National Grid
Contractor: Posillico Inc.

Field Date: Friday October 4, 2024

GEI Proj. No. 093180-4.1422

Time of Arrival: 7:00 a.m. **Departure:** 15:30 p.m.
Weather: **AM** 56° F, sunny, **PM** 73° F, mostly cloudy, calm

Persons Contacted, Company
Tina Ezratty (Project Engineer).

GEI Representative(s)
Russ Morang CM
Ellie Florentino (CAMP)

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Eugene Haas (Superintendent).
- Alex Riveria (Laborer)
- Chuck Rocco (E/O)
- Teddy Harris (Laborer)
- Anthony Benjamin (laborer)
- Steve Huffer (E/O)
- Chris Felice (Site Safety)

2. Site Visitors

- Tracey Garland (NYSDEC)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 470 Excavator with bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Sixteen totes containing odor suppressant foam**
- **Slide rail (mobilization began)**

Posillico Inc completed the following:

.

- Completed installation of the slide rail system and excavation of Cell 4 to an approimate.

Elevation 3.3 feet (15' cut). After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO and MGP like odors. Excavated soils consisted mostly of alluvial sand.

- Shipped 6 loads of soils from Cell 2 and Cell 3 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Due to the application of odor suppressant foam, one 250-gallon tote of foam has been used to date.
- Mobilized a mini frac tank to the site.
- Received 7 loads of ¾" stone for Cell backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 4 to determine if excavation has been completed. Tracey and I saw minimal sheens with a light PLO and MGP like odors because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 4 excavation has been completed to the satisfaction of NYSDEC.
3. During soil loadout to Clean Earth, GEI rejected truck #310 supplied by Variant Contracting Plate # AY189D NJ due to the poor condition of the tarp. Posillico contacted the trucking company concerning the condition of several tarps.
4. Air 102 went offline at 06:05. GEI contacted tech support and was able to bring the station back online. A replacement power supply will be delivered on Monday.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Monday October 7, 2024
Client:	National Grid	**Page:**	Page 2 of 7
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed installation of the slide rail system for Cell 5.
- Began excavation of Cell 5. At approximately 13:30, the signal from the Trimble was lost and couldn't be re-established. Because the signal was lost, excavation of Cell 5 was stopped because grade elevations couldn't be determined. Replacement parts will be onsite tomorrow morning and excavation will resume. During excavation, the soils consisted of alluvial sand without odors or sheens.
- Received 7 loads of ¾" stone for Cell backfill.
- Chris Felice conducted an AM tailgate briefing covering the use of spotters and slippery site conditions.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Upon arrival, Air 102 went offline at 07:37 due to a power supply issue. GEI was able to power the unit from the onsite generator and bring the station back online. At 13:25, a replacement power supply was delivered to the site. GEI installed the power supply, and the station is now running on batteries and solar power.
3. During installation of the slide rail system, vibrations were observed triggering the real time alert system. Russ M and Ellie F worked with Tucker Mason (DC Office) and successfully configured the Missions website to see the frequency as well as the velocity of the waves. We determined that an exceedance of the project standards did not occur.
4. Russ M completed the pencil requisition for the month of September. The bid quantity for concrete was 340 tons, due to large footings and thicker slab encountered during demo, the total tonnage was 876 tons.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Tuesday October 8, 2024
Client:	National Grid	**Page:**	Page 2 of 8
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed excavation of Cell 5 to an approximate. Elevation of 3.18 feet (15' cut) below grade. After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors.
- Completed installation of the slide rail system and excavation of Cell 10 to an approximate. Elevation 2.58 feet (15' cut). After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO and MGP like odors. Excavated soils consisted ¾" stone to an approximate depth of 8 feet and approximately 6 feet of alluvial sand and a 1 foot confining layer. NOTE: the 1st two buckets failed due to a small pocket of DNAPL impacted soil. The 3rd attempt passed
- Shipped 18 loads of soils from Cell 4, Cell 5 and Cell 10 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Received 7 loads of ¾" stone for Cell backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Matt Ayers (NYSDEC) inspected the final bucket of soil from Cell 5 to determine if excavation has been completed. Matt and I saw minimal sheens with a light PLO and MGP like odors because we didn't see gross contamination, Russ M and Matt Ayers agreed Cell 5 excavation has been completed to the satisfaction of NYSDEC.
3. Russ M and Matt Ayers (NYSDEC) inspected the final bucket of soil from Cell 10 to determine if excavation has been completed. Matt and I saw minimal sheens with a light PLO and MGP like odors because we didn't see gross contamination (3rd attempt), Russ M and Matt Ayers, agreed Cell 10 excavation has been completed to the satisfaction of NYSDEC. NOTE: the 1st two attempts failed due to a small pocket of DNAPL impacted soil, however the 3rd attempt passed.
4. During soil loadout to Clean Earth, GEI rejected three trucks supplied by D&A due to the poor condition of the tarps. The drivers repaired the tarps to the satisfaction of GEI and were allowed to load.
5. GEO took part in an onsite meeting concerning sampling to supplement the PDI investigation. Attendees were Bill Ryan (National Grid), Mike Quinlan (National Grid) Mat Ayers and me.
6. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations

from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed installation of the slide rail system and completed excavation of Cell 9 to an approximate. Elevation of 3.3 feet (15' cut). After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of ¾" stone to an approximate depth of 7 feet and approximately 8 feet of alluvial sand.
- Completed installation of the slide rail system and began excavation of Cell 8. Due to a mechanical issue with the excavator, excavation will be complete tomorrow.
- Shipped 3 loads of soils from Cell 9 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Received 5 loads of ¾" stone for Cell backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 9 to determine if excavation has been completed. Tracey and I saw minimal sheens with a light PLO like odors because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 9 excavation has been completed to the satisfaction of NYSDEC.
3. Tracey Garland (NYSDEC) observed a small amount of LNAPL in the corner of Cell 10 and some staining on a small area of ¾" stone backfill. Because Tracey contacted Matt Ayers, I informed Mike Quinlan (National Grid) of the situation.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed installation of the slide rail system and completed excavation of Cell 8 to an approximate. Elevation of 3.3 feet (15' cut). After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted predominantly of sand.
- Completed excavation of Cell 8 to an approximate Elevation of 3.3 feet (15' cut). After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and then ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted mostly of sand.
- Began installation of the slide rail system and minimal excavation of Cell 6.
- Shipped 2 loads of soils from Cell 9 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body. Note: one truck was rejected due to a tarp that was split open from front to rear and the driver refused to make repairs.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 8 to determine if excavation has been completed. Tracey and I saw minimal sheens with a light PLO like odors because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 8 excavation has been completed to the satisfaction of NYSDEC.
3. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 7 to determine if excavation has been completed. Tracey and I saw minimal sheens with a light PLO like odors because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 8 excavation has been completed to the satisfaction of NYSDEC.
4. Hosted a Teams meeting to discuss a Response to NYSDEC Request to remove LNAPL from each cell and change the order of cell excavation as approved by the NYSDEC. Invitees were limited to GEI, National Grid and Posillico.
5. GEI approved and signed the AIA Invoice for September.
6. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

- **Slide rail (mobilization began)**

Posillico Inc completed the following:

.

- Completed excavation of Cell 6 to an approximate Elevation of 3.3 feet (15' cut). After the excavation was completed, absorbent boom was placed into the cell and used to corral the NAPL into one corner of the cell. After the NAPL was corralled into one corner, absorbent pads were used to absorb the bulk of the NAPL. After the NAPL was removed to the satisfaction of the NYSDEC, the plan was to install an orange (snow fence) demarcation barrier at the bottom of the excavation and then add the ¾" stone backfill to an elevation above ground water. The contractor did not follow procedure, removed a portion of the NAPL and then completed backfill which caused the remaining NAPL to overflow out of the cell (into Cell 5) and captured by pads. I assured the DEC that would not happen again. The NYSDEC said they don't wnt to see NAPL overflow into a clean cell and also want more NAPL (~ 75%) removed. The DEC did pass this cell. During excavation, odor suppressant foam was applied to the stockpile due to light PLO like odors. Excavated soils consisted predominantly of sand.
- Shipped 6 loads of soils from Cell 8 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Received 5 loads of ¾" stone for cell backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 6 to determine if excavation has been completed. Tracey and I saw minimal sheens with a light PLO like odor. Because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 8 excavation has been completed to the satisfaction of NYSDEC.
3. I spoke with Tina Ezratty and said the procedure for NAPL removal is as follows: after the last bucket of soil is removed, Tracey Garland (NYSDEC) and I will determine if we can backfill. If the Cell has been cleared for backfill, the orange demarcation barrier will be immediately installed and then the ¾" stone will be placed to push the NAPL to one side of the cell and absorbed by boom/ pads. After the bulk of the NAPL has been removed (5 to 10 minutes of absorption) backfill will be immediately completed to an elevation above GW elevation. NOTE: The idea of pushing the NAPL to one side of the cell makes for a much smaller area to absorb NAPL and is also a safer method for the laborers because most of the cell will be backfilled.
4. Russ M and Ellie F marked boring locations to supplement the PDI investigation that will take place tomorrow.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during

work hours only. The real time data alert system is up and running and the server is receiving all data files.

Last bucket of soil removed from Cell 6 used to determine the absence of gross contamination.

Cell 6 during final excavation.

Installation of boom and pads for NAPL removal.

Attempting to corral the NAPL into a smaller area for absorption.

Installation of the boom in progress after some of the NAPL had been removed.

NAPL remaining within Cell 6 due to improper removal technique.

FIELD OBSERVATION REPORT

Project: Bayshore Former MGP Site
Operable Unit 4, 22 Oak Street
Client: National Grid
Contractor: Posillico Inc.

Field Date: Friday October 11, 2024

GEI Proj. No. 093180-4.1422

Backfill was completed before absorbing the NAPL was completed which caused overflow into Cell 5.

By: Russ Morang	**Reviewed By: Eric Spazzarini**

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Saturday October 12, 2024
Client:	National Grid	**Page:**	Page 1 of 3
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Time of Arrival: 7:00 a.m.
Weather: **AM** 55° F, cloudy, calm

Departure: 14:30 p.m.
PM 72° F, mostly sunny, calm

Persons Contacted, Company
Mike Quinlan (National Grid).

GEI Representative(s)
Russ Morang CM
Ellie Florentino (CAMP)
Lay Desai (Geoprobe Oversight)

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Coastal Environmental (Driller).
- Coastal Environmental (Helper).

2. Site Visitors

- Tracey Garland (NYSDEC)

Equipment Onsite

- Geoprobe

Coastal Environmental completed the following:

.

- Completed 6 borings to supplement the PDU investigation. PDI-20 was completed to 20 feet, PDI-19 was completed to 5 feet, PDI-18 was completed to 20 feet, PDI-17 was completed to 15 feet, PDI-16 was completed to 15 feet and PDI-15 was completed to 15 feet. Impacts were observed at the PDI-18 location. Coastal installed 2 additional borings to confirm the limits of impacts. The furthest offset boring was installed inline with PDI-15, 16 and 17.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the borings which exhibited mostly PLO like odors and sheens.

3. Lay Desai completed drilling oversight and will complete gINT logs for review. Lay and Ellie collected one sample from PDI-19 and two from PDI-18 (one from original location and one from the second offset location, and one waste characterization sample. All samples were transported to the lab by courier to Eurofins for analyses. All samples were placed immediately onto ice for preservation.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

- **Security guard booth**
- **Two roll-off containers**
- **Sixteen totes containing odor suppressant foam**
- **Slide rail (mobilization began)**

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Monday October 14, 2024
Client:	National Grid	**Page:**	Page 2 of 8
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed installation of the slide rail system and completed excavation of Cell 11 to an approximate Elevation of 2.2 feet (16.1' cut). The elevation was lowered to Elevation 2.2 feet due to NAPL saturated soils causing a large volume of NAPL to be observed. After the excavation was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. Then, ¾" stone backfill was placed to an elevation above ground water into approximately 2/3 of the cell forcing the NAPL into the NW portion of the cell for easier and safer removal. The NAPL layer was approximately ½" to ¾" thick and took approximately 2 hours to remove with the repeated use of boom and pads. During excavation, odor suppressant foam was applied due to moderate MGP and PLO like odors. Excavated soils consisted predominantly of sand.
- Shipped 3 loads of soils from Cell 8 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M inspected the final bucket of soil from Cell 11 to determine if excavation has been completed. I observed NAPL saturated soil, staining, and sheens with a moderate MGP and PLO like odor's. Because I observed gross contamination, I directed the contractor to excavate further. At approximate Elevation 2.2, I observed light MGP like odors and sheens but didn't observe NAPL. I then authorized Posillico to complete backfill. Due to the possibility of increased NAPL during excavation of Cells 12, 13, 18 and 19 (21-foot-deep excavations'), I asked Posillico to explore other options for an efficient and cost saving method of NAPL removal.
3. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Photos

- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Sixteen totes containing odor suppressant foam**
- **Slide rail (mobilization began)**

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed installation of the slide rail system and completed excavation of Cell 12 to an approximate Elevation of -2.25 feet. Cell 12 excavation design depth is 21 feet, due to the depth of excavation, undermining was observed around the cell. The contractor decided to install another set of slide rail panels and will complete excavation tomorrow. All material removed from the cell was sand with a mild MGP/ PLO type odor, with sheens. I looked at the material being removed from approximate El. 3.0; the material showed a small amount of NAPL with sheen's and light MGP/ PLO like odor. The cell also showed only a small amount of LNAPL floating on top of ground water.
- Shipped 5 loads of soils from Cell 8 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 6 loads of ¾" stone for cell backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.
3. Cell 12 contains much less NAPL than Cell 11 which was completed yesterday.

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed installation of additional slide rail panels to prevent undermining and completed excavation of Cell 12 to a depth of 21 feet. After the excavation was completed with approved from Matt Ayers, Simple Green was used in NAPL removal then an orange (snow fence) demarcation barrier was placed at the bottom of the excavation and ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to moderate MGP and PLO like odors. Excavated soils consisted predominantly of sand.
- Began installation of the slide rail system for Cell 13 (21-foot cut) and began minimal excavation until the remaining slide rail panels have been installed. The material being removed was sand with a moderate PLO like odors and sheen.
- Shipped 10 loads of soils from Cell's 11and 12 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 5 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Hosted week 4 progress meeting.
3. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 12 to determine if excavation has been completed. The final bucket contained sand which was representative of the limit of excavation. The sand contained shell fragments and didn't have NAPL, odors or sheens. On top of that material was a mixture of sand and ¾" backfill stone due to undermining and was not representative of the limit of excavation. The material contained NAPL, sheens and MGP odors. Tracey Garland stated the cell must be excavated deeper. I stated the excavator is at the limit of reach and we are at design grade (21-foot cut) and the clean sand is representative of the limit of excavation. At the request of Matt Ayers (NYSDEC) I called him to discuss the NAPL reported by Tracey Garland. I provided pictures showing undermining around the cell to prove NAPL is migrating downward and pictures showing clean sand representative of design grade. Matt agreed with my decision to end excavation. Russ M and Matt Ayers agreed Cell 12 excavation has been completed to the satisfaction of NYSDEC. I spoke with Posillico and stated they can use Simple Green (authorized by Matt Ayers NYSDEC) to aid in the removal of LNAPL and then backfill Cell 12.
4. I spoke with Matt Ayers (NYSDEC) and stated PDI-18 and one offset location sampled on 10-12-24 did contain impacts which were not shown on the boring logs.

5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Thursday October 17, 2024
Client:	National Grid	**Page:**	Page 2 of 8
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed installation of additional slide rail panels to prevent undermining and completed excavation of Cell 13 to a depth of 21 feet. After the excavation was completed and approved by Tracey Garland (NYSDEC), Simple Green was used for NAPL recovery then an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After the small amount of NAPL was removed from the surface, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to moderate MGP and PLO like odors. Excavated soils consisted predominantly of sand. NOTE: it was determined that slide rail panel installation did not conform to the approved SOE submitted by Posillico.
- Began installation of the slide rail system for Cell 14 (15-foot cut). Minimal excavation was completed to an approximate depth of 6 feet. Material removed was initially ¾" stone backfill changing to sand with a light MGP/ PLO like odors and sheen.
- Shipped 4 loads of soils from Cell's 11and 12 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 6 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Hosted week 4 progress meeting.
3. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 13 to determine if excavation has been completed. Tracey and I saw no sheens or odor or signs of NAPL. Because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 13 excavation has been completed to the satisfaction of NYSDEC.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

- **Slide rail (mobilization began)**

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed excavation of Cell 14 to an approximate Elevation of 3.3 feet (15' cut). After the excavation was completed, a small volume of NAPL was removed with boom and pads then an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Completed installation of the slide rail system and began excavation of Cell 15. During excavation, odor suppressant foam was applied to the stockpile due to light PLO like odors. Excavated soils consisted of sand with no sheen or NAPL.
- Imported 5 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 14 to determine if excavation has been completed. Tracey and I saw no sheens or odor or signs of NAPL. Because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 14 excavation has been completed to the satisfaction of NYSDEC.
3. Lay Desai and Peter Recchia attempted to hand auger the offset location for PDI-17 to a max depth of 10 feet. Due to constant collapse of the boring, Chris Morris decided to mobilize a Geoprobe on 10/21/24 to collect the sample.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

2. Russ M inspected the final bucket of soil from Cell 15 to determine if excavation has been completed. I saw no sheens, odors or signs of NAPL. Because I didn't see gross contamination, Russ M determined Cell 15 excavation has been completed. NOTE: Tracey Garland arrived after the cell excavation had been completed. Upon arrival, I showed Tracey Garland (NYSDEC) the last bucket of soil used to determine compliance. Tracey agreed with my determination.
3. Chris Morris and Lay Desai mobilized a Geoprobe and collected two samples from a depth of 15 feet. The first sample was PDI-17 R (original location) and PDI-18 IR (4 foot offset). Samples were placed into an iced cooler and will be shipped to Eurofins by courier.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Tuesday October 22, 2024
Client:	National Grid	**Page:**	Page 1 of 7
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Time of Arrival: 7:00 a.m. **Departure:** 16:00 p.m.
Weather: **AM** 56° F, mostly sunny, breezy **PM** 74° F, sunny, calm

Persons Contacted, Company	**GEI Representative(s)**
Tina Ezratty (Project Engineer).	Russ Morang CM Ellie Florentino (CAMP)

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Gene Haas (Superintendent).
- Alex Riveria (Laborer)
- William Sapata (E/O)
- Teddy Harris (Laborer)
- Anthony Benjamin (laborer)
- Ralph Faulkner (E/O)
- Chris Felice (Site Safety)

2. Site Visitors

- Tracey Garland (NYSDEC)
- Bill Ryan (National Grid)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 470 Excavator with bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Sixteen totes containing odor suppressant foam**
- **Slide rail system**

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed excavation of Cell 20 to an approximate Elevation of 3.3 feet (15' cut). After the excavation was completed, a small volume of NAPL was removed with boom and pads then an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Began installation of the slide rail system for Cell 19 (21-foot cut). During initial excavation, odor suppressant foam was applied to the stockpile at the request of Tracey Garland (NYSDEC). Excavated soils consisted of fill material with no odors, sheen or NAPL.
- Shipped 10 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 5 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket of soil from Cell 20 to determine if excavation has been completed. Tracey and I saw sheens, light PLO or signs of NAPL. Because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 20 excavation has been completed to the satisfaction of NYSDEC.
3. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Wednesday October 23, 2024
Client:	National Grid	**Page:**	Page 2 of 5
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed excavation of Cell 19 to an approximate Elevation of -3.0 feet. After the excavation was completed, a small volume of NAPL was removed with boom and pads then an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO odors. Excavated soils consisted of sand.
- Shipped 10 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 6 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M observed the final bucket (El.- 2.2') from Cell 19 and immediately asked the contractor to excavate deeper because I observed a small lens of material containing gross contamination. Russ M and Tracey Garland (NYSDEC) inspected the 2nd final bucket of soil from Cell 19 to determine if excavation has been completed. Tracey and I observed light PLO odors. Because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 19 excavation has been completed to the satisfaction of NYSDEC.
3. Hosted the Week 5 progress meeting.
4. Bill Ryan was approached by a local resident who mentioned he feels vibrations during installation of the slide rail system. Russ M and Gene Haas walked along Oak Street from the site entrance to the intersection of West Drive while installation of the slide rail system for Cell 19 was in progress. Vibrations were noticeable outside of the gate but diminished as we approached West Drive where the vibrations were barely noticeable. All VM data shows velocities and frequencies below established action levels throughout the duration of the project.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

- **Slide rail system**

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 16 to an approximate Elevation of 3.0 feet. After the excavation was completed, NAPL was not observed. An orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Shipped 7 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket (El. 3.0') from Cell 16 to determine if excavation has been completed. Tracey and I observed light PLO like odors. Because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 16 excavation has been completed to the satisfaction of NYSDEC.
3. Russ M calibrated and started the portable CAMP station.
4. TE asked if I could provide a ton to CY conversion for the ¾" stone backfill in preparation for the October's invoice. I stated the pay item for placement of backfill material is by the CY and a survey must be submitted for backup. Tina asked if survey is ok for excavation. I responded by saying yes. Tina asked if I could verify three totes of odor suppressant foam was used during the month. Tina stated the material was from another jobsite and she doesn't have backup. I stated that I need some form of backup.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 21 to an approximate Elevation of 2..9 feet. After the excavation was completed, a visual inspection of the cell was completed to access NAPL removal however NAPL was not observed. After installation of the orange (snow fence) demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Shipped 7 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 4 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket (El. 3.2') from Cell 21 to determine if excavation has been completed. I observed a very small amount of NAPL stained soil in the corner of the bucket with a light MGP and PLO like odor's. Because I observed gross contamination, I directed the contractor to excavate further. At approximate Elevation 2.9 feet, I observed light PLO and OLO like odors with no sheens or staining. Russ M and Tracey Garland agreed Cell 21 excavation has been completed to the satisfaction of NYSDEC.
3. I provided Bill Ryan (National Grid) with a site update.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Wednesday October 30, 2024
Client:	National Grid	**Page:**	Page 2 of 6
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 22 to an approximate Elevation of -0.7 feet (19' cut). After the excavation was completed, a small volume of NAPL was removed with boom and pads then an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand with some ¾" stone.
- Shipped 5 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 6 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket (El. -0.7') from Cell 22 to determine if excavation has been completed. Tracey Garland and I observed light PLO odors. Because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 22 excavation has been completed to the satisfaction of NYSDEC.
3. GEI hosted the Week 6 progress meeting to include a Power Point photo presentation.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. FIELD OBSERVATION REPORT

Project: Bayshore Former MGP Site Operable Unit 4, 22 Oak Street
Client: National Grid
Contractor: Posillico Inc.

Field Date: Thursday October 31, 2024

GEI Proj. No. 093180-4.1422

Time of Arrival: 7:00 a.m.
Weather: **AM** 59° F, sunny, calm

Departure: 15:30 p.m.
PM 70° F, sunny, breezy

Persons Contacted, Company
Tina Ezratty (Project Engineer).

GEI Representative(s)
Russ Morang CM
Ellie Florentino (CAMP)

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Gene Haas (Superintendent).
- Alex Riveria (Laborer)
- William Sapata (E/O)
- Teddy Harris (Laborer)
- Anthony Benjamin (laborer)
- Steven Huff (E/O)
- Chris Felice (Site Safety)

2. Site Visitors

- Tracey Garland (NYSDEC)
- Bill Ryan (National Grid)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 470 Excavator with bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Totes containing odor suppressant foam**
- **Slide rail system**

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 23 to an approximate Elevation of 2.8 feet. After the excavation was completed, a small volume of NAPL was removed with boom and pads then an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Shipped 5 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 12 loads of ¾" stone backfill.
- Began placing/ grading ¾" stone backfill in Cells 1 through 20.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M and Tracey Garland (NYSDEC) inspected the final bucket (El. 3.3') from Cell 23 to determine if excavation has been completed. Due to moderate PLO like odors and ¾" stone backfill comingled with the alluvial sand, Tracey Garland asked if we could excavate deeper. I directed Gene to excavate deeper. The final bucket (El 2.8 feet) Tracey Garland and I observed had light PLO like odors, with no sheen or NAPL. Because we didn't see gross contamination, Russ M and Tracey Garland agreed Cell 23 excavation has been completed to the satisfaction of NYSDEC.
3. Met with Bill Ryan (National Grid) and provided a site update.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 25 to an approximate Elevation 2.9 feet. After the excavation was completed, a visual inspection of the cell revealed no NAPL was present. After the visual inspection, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Shipped 10 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 4 loads of ¾" stone backfill.
- Imported 6 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Tracey Garland (NYSDEC) was not onsite; therefore, Russ M inspected the final bucket (El. 2.9') from Cell 25 to determine if excavation has been completed. I observed light PLO like odors, with no sheen or NAPL. Because I didn't see gross contamination, Cell 25 excavation has been completed to the satisfaction of NYSDEC.
3. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 30 to an approximate Elevation 2.7 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After the visual inspection, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Shipped 4 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Tracey Garland (NYSDEC) was not onsite; therefore, Russ M inspected the final bucket (El. 2.7') from Cell 30 to determine if excavation has been completed. I observed light PLO like odors, with no sheen or NAPL. Because I didn't see gross contamination, Cell 30 excavation has been completed to the satisfaction of NYSDEC. NOTE: the first bucket of sand removed from Elevation 3.3 feet exhibited a slight MGO like odor with no sheen or tar and a moderate PLO like odors. Due to the odors, I directed Posillico to excavate deeper to Elevation 2,7 feet.
3. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 29 to an approximate Elevation 2.7 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After the visual inspection, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Shipped 4 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 6 loads of ¾" stone backfill.
- Began slide rail installation for Cell 28.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Tracey Garland (NYSDEC) was not onsite; therefore, Russ M inspected the final bucket (El. 2.7') from Cell 29 to determine if excavation has been completed. I observed light PLO like odors, with no sheen or NAPL. Because I didn't see gross contamination, Cell 29 excavation has been completed according to the guidelines provided by the NYSDEC. I authorized Posillico to complete the demarcation barrier and backfill installation.
3. GEI hosted the Week 7 project progress meeting. Russ M provided a photo presentation for activities conducted during the previous week and provided a figure showing the location and details of the stockpile needed to complete excavation.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 28 to an approximate Elevation of 2.9 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After the visual inspection, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Shipped 6 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 6 loads of ¾" stone backfill.
- Began installation of the stockpile along the SE portion of the excavation area. Posillico made a change to the attached detail provided to the team. Construction began with a 3-foot-high soil berm then the attached detail construction will take place inside of the soil berm. A follow up detail will be provided to GEI tomorrow.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Tracey Garland (NYSDEC) was not onsite; therefore, Russ M inspected the final bucket (El. 2.9') from Cell 28 to determine if excavation has been completed. I observed light PLO like odors, with no sheen or NAPL. Because I didn't see gross contamination, Cell 28 excavation has been completed according to the guidelines provided by the NYSDEC. I authorized Posillico to complete the demarcation barrier and backfill installation.
3. Russ M verified the quantities submitted by Posillico in October's pencil Invoice.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Friday November 8, 2024
Client:	National Grid	**Page:**	Page 2 of 11
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Resumed installation of the stockpile adjacent to Cells 36 through Cell 38 . Posillico made a change to the attached detail provided to the team. Construction resumed with installation of a 3-foot-high soil berm constructed of imported clean fill. After the berm construction had been completed, the area was graded to allow water to drain to the excavation area. Debris was removed to prevent liner punctures, and the area was compacted with small plate compactors. Haybales were then installed around the outside perimeter of the soil berm. Due to the size of the stockpile, the bottom liner was constructed from 3 sections of liner. At my request, I asked for 12” minimum over lapping joints which were glued together using Liquid Nails. The exposed seams were secured with Flex Seal waterproof rubberized tape. NOTE: The NYSDEC sent an email stating installation of the stockpile will have a bottom and top liner with a 6” sandy layer sandwiched in between. Time tracked is 6.5 hours.
- Shipped 4 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 4 loads of clean fill backfill for construction of the stockpile..
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M asked Tina Ezratty to provide backup showing the cost of the Atmos odor suppressant foam. I verified the quantities submitted by Posillico for October’s pencil Invoice. Per Mike Quinlan, Posillico may have to remove the change order from October’s invoice and submit the change order with an appropriate form directly to NG. Mike Quinlan will speak with procurement.
3. I tracked 6.5 hours for installation of the stockpile. Posillico will resume installation next week.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Photos

All export material was loaded into lined trucks.

Due to the poor condition of the tarp, this truck was rejected.

Posillico is grading the area to allow drainage to the excavation area.

Posillico is removing debris and compacting the stockpile area.

The stockpile area was graded to allow soils to drain back into the excavation area.

12” minimum overlap between liner sections.

Clean imported backfill used between the bottom and top sections of liner.

Flex seal rubberized water proof tape used to secure the seams.

Began placement of clean imported backfill on top of bottom section of liner.

Haybales were placed outside of the soil berm.

Client:	National Grid	**Page:**	Page 1 of 7
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Time of Arrival: 7:00 a.m. **Departure:** 16:30 p.m.
Weather: **AM** 59° F, cloudy, breezy **PM** 768° F, mostly sunny, breezy

Persons Contacted, Company
Tina Ezratty (Project Engineer).

GEI Representative(s)
Russ Morang CM

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Gene Haas (Superintendent).
- Alex Riveria (Laborer)
- William Sapata (E/O)
- Teddy Harris (Laborer)
- Anthony Benjamin (laborer)
- Steven Huff (E/O)
- Chris Felice (Site Safety)

2. Site Visitors

- Mike Rosato (Posillico)
- Mile Perciballi (Posillico)
- Larry Gilman (Posillico)
- Mike Huvane (Posillico Sub)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 470 Excavator with bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Totes containing odor suppressant foam**
- **Slide rail system**

Posillico Inc completed the following:

.

- Completed installation of the stockpile. Activity included installation of the 6” layer of imported clean fill and the top liner. Installation took 2 hours to complete.
- Completed slide rail installation and excavation of Cell 27 to an approximate Elevation 3.3 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After the visual inspection, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾” stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Imported 6 loads of clean backfill material.
- Began slide rail installation for Cell 26.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. I calibrated and resumed air monitoring with the portable AMS.
3. Tracey Garland (NYSDEC) was not onsite; therefore, Russ M inspected the final bucket (El. 3.3’) from Cell 27 to determine if excavation has been completed. I observed light PLO like odors, with no sheen or NAPL. Because I didn’t see gross contamination, Cell 27 excavation has been completed according to the guidelines provided by the NYSDEC. I authorized Posillico to complete the demarcation barrier and backfill installation after the small amount of NAPL was removed.
4. GEI received an alert that Air 103 (2755) went offline due to a power issue. Upon arrival to the site, I powered the unit with a rescue pack. I then purchased 3 extension cords and began charging the main battery pack using the generator.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 26 to an approximate Elevation 3.3 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After the visual inspection, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of sand.
- Began installation of the slide rail system for Cell 31.
- Shipped 2 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body.
- Imported 6 loads of ¾" stone backfill.
- Tina Ezratty asked for the following: a drawing showing the three additional cells for excavation with coordinates, concrete sidewalk replacement details, decon pad restoration details and a stockpile detail.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI calibrated and resumed air monitoring with the portable AMS.
3. Tracey Garland (NYSDEC) was not onsite; therefore, Russ M inspected the final bucket (El. 3.3') from Cell 26 to determine if excavation has been completed. I observed light PLO like odors, with no sheen or NAPL. Because I didn't see gross contamination, Cell 26 excavation has been completed according to the guidelines provided by the NYSDEC. I authorized Posillico to complete the demarcation barrier and backfill installation after the small amount of NAPL was removed.
4. Russ M sent Tina a detail of the stockpile "As Built". Eric Spazzarini will provide a figure showing the three additional cells for excavation with coordinates, concrete sidewalk replacement details, and decon pad restoration details.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Ellie Fiorentino CAMP

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Gene Haas (Superintendent).
- Alex Riveria (Laborer)
- Teddy Harris (Laborer)
- Anthony Benjamin (laborer)
- William Sepata (E/O)
- Robert Hickson (E/O)
- Chris Felice (Site Safety)

2. Site Visitors

- Mike Quinlan (National Grid)
- Mike Perciballi (Posillico)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 470 Excavator with bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Totes containing odor suppressant foam**
- **Slide rail system**

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Wednesday November 20, 2024
Client:	National Grid	**Page:**	Page 2 of 6
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 36 to an approximate elevation of 3.1 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After the visual inspection, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of gray sand.
- Began installation of the slide rail system for Cell 34.
- Shipped 4 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body before soil load-out began.
- Imported 6 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI calibrated and resumed air monitoring with the portable AMS.
3. Russ M and Tracey Garland (NYSDEC) inspected the final bucket (~El. 3.1') from Cell 36 to determine if excavation has been completed. I observed light PLO like odors, with no sheen or NAPL. Because we didn't see gross contamination, Cell 36 excavation has been completed according to the guidelines provided by the NYSDEC. I authorized Posillico to complete installation of the demarcation barrier and ¾" stone backfill.
4. Conducted the weekly progress meeting
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Project:	Bayshore Former MGP Site Operable Unit 4, 22 Oak Street	**Field Date:**	Friday November 22, 2024
Client:	National Grid	**Page:**	Page 2 of 5
Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Completed slide rail installation and excavation of Cell 35 to an approximate elevation of 1.9 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After the visual inspection, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors. Excavated soils consisted of gray sand.
- Shipped 4 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body before soil load-out began.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI calibrated and resumed air monitoring with the portable AMS.
3. Russ M and Tracey Garland (NYSDEC) inspected the first bucket at an approximate elevation of 3.3 feet and observed some blebs and sheens. The same observation occurred from the second bucket at an approximate elevation of 2.9 feet. The final bucket at an approximate elevation of 1.9 feet from Cell 35 was used to determine if excavation has been completed. I observed light PLO like odors, with no sheen or blebs. Because we didn't see gross contamination, Cell 35 excavation has been completed according to the guidelines provided by the NYSDEC. I authorized Posillico to complete installation of the demarcation barrier and ¾" stone backfill.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. 2. Site Visitors

- **Mike Rosato (Posillico)**

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 470 Excavator with bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Totes containing odor suppressant foam**
- **Slide rail system**
- **CAT CS44B Roller**
- **CAT D3K Dozer**

Posillico Inc completed the following:

.

- Posillico mobilized a CAT D3K dozer and a CAT CS44B roller for backfill placement and final grading activities.
- Posillico began excavation and backfill of three additional cells that were requested by the NYSDEC. Cell 39 will be 8' x 12' x 13', Cell 40 will be 12' x 12' x 13', and Cell 41 will be 12' x 12' x 13'.
- Completed slide rail installation and excavation of Cell 39 to an approximate elevation of 5 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After NAPL removal was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light PLO like odors observed at the bottom of excavation. Excavated soils to 10 feet below grade consisted of dark gray sand and black fines mixed with glass, steel and brick debris. Additionally, a 12" layer at approximately 10 feet below existing grade consisted of black fines with mild OLO like odors, with no observed sheen's or NAPL. Mild PLO like odors were observed at the bottom of excavation.
- Shipped 5 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body before soil load-out began.
- Imported 6 loads of ¾" stone backfill.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI calibrated and resumed air monitoring with the portable AMS. Due to cloudy days, GEI connected the battery pack powering CAMP station 2754 to the generator.
3. Russ M observed and documented soils removed from Cell 39 and observed Tracey Garland (NYSDEC) while he collected two samples for analyses at approximately 10 feet below grade (black fines) and at approximately 13 feet (dark gray sand). I inspected the last bucket at an approximate elevation of 5 feet and observed dark gray sand with light to moderate PLO like odors, with no observed NAPL, sheen or signs of gross contamination. The NYSDEC asked we complete excavation of the additional cells to 13 feet, I authorized Posillico to complete installation of the demarcation barrier and ¾" stone backfill.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations

from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Contractor:	Posillico Inc.	**GEI Proj. No.**	093180-4.1422

Posillico Inc completed the following:

.

- Posillico completed excavation and backfill of three additional cells that were requested by the NYSDEC. Cell 39 excavation dimensions were 8' x 12' x 13', and Cells 40 and 41 excavated dimensions were 12' x 12' x 13'.
- Completed slide rail installation and excavation of Cell 41 to an approximate elevation of 5 feet. After the excavation was completed, a visual inspection of the cell revealed a small amount of NAPL was present and was removed with boom and pads. After NAPL removal was completed, an orange (snow fence) demarcation barrier was placed at the bottom of the excavation. After installation of the demarcation barrier was completed, ¾" stone backfill was placed to an elevation above ground water. During excavation, odor suppressant foam was applied due to light to moderate PLO like odors observed from 8 feet to the bottom of excavation.
- Shipped 4 loads of soils to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body before soil load-out began.
- Demobilized 8 extra 250-gallon totes containing odor suppressant foam.
- Began grading the ¾" stone backfill from Cell 1 through Cell 35.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI calibrated and resumed air monitoring with the portable AMS. Due to upcoming holiday break and low voltage readings, GEI connected the battery packs powering CAMP station 2754 and 2755 to the generator.
3. Russ M observed and documented soils removed from Cell 41 and observed Tracey Garland (NYSDEC) while he collected one sample for analyses at approximately 8 feet below grade (gray sand with a light PLO) . I inspected the last bucket at an approximate elevation of 5 feet and observed gray sand with light PLO like odor, with no observed NAPL, sheen or signs of gross contamination. The NYSDEC asked we complete excavation of the additional cells to 13 feet, I authorized Posillico to complete installation of the demarcation barrier and ¾" stone backfill.
4. All contract Cells 1 through 38 and three additional Cells 39 through 41 have been complete to the satisfaction of the NYSDEC.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Posillico Inc completed the following:

.

- Shipped 4 loads of soils from Cell 41 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body before soil load-out began. During loadout, the top liner was punctured and contaminated the clean fill placed between the top and bottom liners. The contaminated material was stockpiled and will be shipped to CE tomorrow.
- Began decontamination of the slide rail panels for site demobilization.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M arrived at 0600 and connected Aeroqual station 2755 to a rescue battery pack because the station went offline over the weekend. During the day, the main battery pack was charged with the generator.
3. GEI calibrated and resumed air monitoring with the portable AMS.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, one Instantel vibration monitoring station is being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring station are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Gene Haas (Superintendent).
- Alex Riveria (Laborer)
- Teddy Harris (Laborer)
- Anthony Benjamin (laborer)
- Robert Hickson (E/O)
- Chris Felice (Site Safety)

2. Site Visitors

- Mike Quinlan (National Grid)
- Bill Ryan (National Grid)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 470 Excavator with bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **Two roll-off containers**
- **Slide rail system**
- **CAT CS44B Roller**
- **CAT D3K Dozer**

Posillico Inc completed the following:

.

- Shipped the final 2 loads of soils from Cell 41 to Clean Earth of Pennsylvania. Before the trucks were loaded, soils were allowed to decant overnight, and a liner was installed in each truck body before soil load-out began. During soil loadout yesterday from the stockpile, the top liner was punctured and contaminated the clean fill placed between the top and bottom liners. The contaminated material was also shipped to CE this morning.
- Resumed decontamination of the slide rail panels for site demobilization.
- Manually cleaned the bottom stockpile liner (shovels, brooms and water) to ensure the bottom liner was not punctured, then the liner was then removed.
- Began removal of the haybales from the former stockpile for offsite disposal.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M arrived at 0630 and connected Aeroqual station 2755 to a rescue battery pack because the station went offline last night. During the day, the main battery pack was charged with the generator.
3. GEI calibrated and resumed air monitoring with the portable AMS.
4. I inspected the bottom stockpile liner and determined the liner was not punctured.
5. Per Mike Quinlan, I prepared a drawing markup showing preconstruction fence conditions.
6. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, two Instantel vibration monitoring stations are being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring stations are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Imported 11 loads of clean backfill material and continued placement within the eastern portion of the excavation area.
- Decontaminated the John Deere 470 excavator.
- Shipped one small load of concrete (approx. 2.5 tons) for recycle which originated from the area between the excavation area and Oak Street.
- Received and installed additional non-woven geo-textile fabric across the western portion of the excavation area.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. Russ M arrived at 0600 and connected Aeroqual station 2754 to a rescue battery pack because the station went offline on 12/8/24 at 11:39 pm. During the day, the main battery pack was charged with the generator.
3. GEI calibrated and resumed air monitoring with the portable AMS.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, two Instantel vibration monitoring stations are being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring stations are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

- **CAT CS44B Roller**
- **CAT D3K Dozer**

Posillico Inc completed the following:

.

- Imported 6 loads of clean backfill material and continued placement within the eastern portion of the excavation area.
- Decommissioned the anti-tracking pad generating two loads of material which was shipped to Clean Earth of Pa for disposal. The stone was removed to a depth of 12", exposing the 20-mil liner which was also removed. After removal, the area was backfilled with an 8" compacted layer of imported clean fill and topped with a 4" compacted layer of ¾" stone.
- Shipped approximately 2,479 gallons of decon water from the mini frac tank to Clean Water of New York. The material was shipped out on Non-Hazardous manifest # 209747. The frac tank has been emptied and will be cleaned before demob from the site
- Demobilized non-essential supplies from the site.
- Resumed placement of the clean fill in 12" compacted lifts. Three 12" compacted lifts were completed across the western portion of the excavation area. The material tester completed 2 compaction tests per lift and the results were as follows:

    a. Lift 1
        i. test #1 - 95.8%
        ii. test #2 – 101.5%
    b. Lift 2
        i. test #3 - 95.6%
        ii. test #4 - 96.4%
    c. Lift 3.
        i. test #5 – 97.3%
        ii. test #6 – 95.4%

- Mike Silva staked out the excavation area for installation of the stone cap.
- Mobilized 7 sections of temporary fencing which will be used to secure the site after demob.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. At 1400, Russ M connected Aeroqual station 2754 to a rescue battery pack because the station would have gone offline overnight. I connected the main battery pack to the generator for approximately 2 hours.
3. GEI calibrated and resumed air monitoring with the portable AMS.
4. Due to exceedances with the VM -1 without a rational explanation, I removed vegetation and organic debris from the geo phone and determine the contractor had removed the sandbag. After replacing the sandbag, I installed cones and caution tape to protect VM-1 location. We have received no further exceedances.
5. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring

station. In addition, two Instantel vibration monitoring stations are being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring stations are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Imported 12 loads of clean backfill material and continued placement within the excavation area.
- Demobilized non-essential supplies from the site to include concrete jersey barriers located along a portion of Oak Street, mini frac tank, and the foam machine.
- Began installation of the form work in prep to pour the sidewalk along a portion of Oak Street.
- Resumed placement of the clean fill in a 12" compacted lift. One final 12" compacted lift was completed across the excavation area. The material tester completed 3 compaction tests across the top lift and the results were as follows:

    a. Lift 4
        i. test #1 - 95.0%
        ii. test #2 – 95.0%
        iii. test #3 - 95.0%

- Installed 7 additional sections of temporary fencing which will be used to secure the site after demobilization.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI calibrated and resumed air monitoring with the portable AMS.
3. In preparation to demobilize all CAMP equipment tomorrow, RM and EF removed and packaged the solar panels from Aeroqual Stations 2753, 2754 and 2755. All Aeroqual power supplies were connected to the generator and should supply power through tomorrow afternoon. In case of power failure, each station will be connected to a rescue pack until demo tomorrow afternoon.
4. GEI is continuing with site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, two Instantel vibration monitoring stations are being used to monitor vibrations from demo/ excavation activities. The Aeroqual air monitoring stations and the Instantel vibration monitoring stations are continuing to run 24/ 7, and the portable air monitoring station will run during work hours only. The real time data alert system is up and running and the server is receiving all data files.

Time of Arrival: 7:00 a.m. **Departure:** 15:00 p.m.
Weather: **AM** 28° F, sunny, breezy **PM** 36° F, partly sunny, breezy

Persons Contacted, Company
Tina Ezratty (Project Engineer).

GEI Representative(s)
Russ Morang CM

Purpose of Site Visit:

- Perform Construction Management during IRM Operable Unit-4 Excavation.

Observations

1. Personnel onsite:

- Tina Ezratty (Project Engineer).
- Gene Haas (Superintendent).
- Alex Riveria (Laborer)
- Teddy Harris (Laborer)
- Anthony Benjamin (laborer)
- Robert Hickson (E/O)
- Nick Vetrano (E/O)
- Chris Felice (Site Safety)
- Mike Silva (Suryeyor)

2. Site Visitors

- Mike Rosato (Posillico)

Equipment Onsite

- **John Deere 744 Loader with bucket and forks**
- **John Deere 470 Excavator with bucket**
- **Two site trailers**
- **Two Sunbelt generators**
- **Two Connex boxes**
- **Security guard booth**
- **One roll-off container**
- **CAT CS44B Roller**
- **CAT D3K Dozer**

FIELD OBSERVATION REPORT

Posillico Inc completed the following:

.

- Imported 12 loads of clean backfill material to complete placement of clean fill within the excavation area.
- Demobilized the John Deere 470 excavator and attachments.
- Completed installation of the form work in prep to pour the sidewalk along a portion of Oak Street on Monday.
- Completed placement and compaction of the clean fill within the excavation area to approximately 4” below grade for installation of the stone cap on Monday.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI calibrated and resumed air monitoring with the portable AMS.
3. GEI resumed site air monitoring using three Aeroqual, and one portable air monitoring station. In addition, two Instantel vibration monitoring stations are being used to monitor vibrations from demo/ excavation activities.
4. GEI shut down all instrumentation at approximately 12:00 after backfill placement and fine grading was completed. All Aeroqual equipment was picked up by Spectro at 14:30 and all GEI instrumentation was transported to Glastonbury.

Posillico Inc completed the following:

.

- Imported 7 loads of ¾" stone to complete placement of the excavation area stone cap
- Completed installation of the concrete sidewalk along Oak Street. Due to light rain, the sidewalk was covered immediately after the pour and will allow partial curing before completing the broom finish. The temperature was 47º F and rising, therefore curing blankets are not needed.
- Completed placement of the stone cap across the excavation area. The material will be rolled tomorrow.
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.

Posillico Inc completed the following:

.

- Stripped form work for the concrete sidewalk along Oak Street. The concrete curb was part of the sidewalk pour, and no issues were observed after the forms were removed.
- Completed fine grading of the 4” stone cap across the excavation area. Due to sandy backfill below the cap, a decision was made not to roll the stone cap.
- Demobilized the CAT CS44B roller and CAT D3K dozer.
- Resumed site demobilization of supplies of equipment.
- Surveyed the stone cap for Decembers pay requisition
- Chris Felice conducted an AM tailgate briefing covering the topic of the day.

GEI Completed the following:

1. Performed construction management during the IRM Operable Unit-4 excavation and completed a daily inspection report.
2. GEI began demobilization of equipment and supplies from the site trailer.

Appendix J Pre-Design Investigation Summary and Correspondence

Michael Quinlan
Senior Program Manager
Site Investigation & Remediation

nationalgrid

October 10, 2024

Mr. Matthew Ayers, P.G.
Project Manager
New York State Department of Environmental Conservation
Division of Environmental Remediation – Bureau C
625 Broadway
Albany, New York 12233-7017

22 Oak Street Pre-Design Investigation
Phase II PDI Results Summary and Recommendations
Bay Shore/Brightwaters Former MGP Site
Bay Shore, New York
Site No. 1-52-172
Order on Consent Index No. D1-0001-98-11

Dear Mr. Ayers:

National Grid has prepared this letter to summarize Phase II of the Pre-Design Investigation (PDI) at the 22 Oak Street property (the Site), located within the Operable Unit 4 (OU-4) area of the Bay Shore/Brightwaters Former Manufactured Gas Plant (MGP). The Phase II PDI was performed to support further delineation of the limits of the New York State Department of Environmental Conservation (NYSDEC) approved Interim Remedial Measure (IRM) for the Site. The Phase II PDI field work was completed in three mobilizations based on access to PDI locations. Field work was completed on April 10, 11 and 12, 2024, July 8, 2024 and August 2 and 5, 2024. The borings in August were completed following the demolition of the on-site building. The work was completed per NYSDEC-approved Phase I PDI work plan, the recommendations in the Phase I PDI Summary Report, and the Phase II PDI scope submitted to the NYSDEC via email on April 28, 2024.

Phase II PDI Activities and Findings

The Phase II PDI focused on further defining the limits of the excavation boundary for the NYSDEC-approved IRM. The Phase II PDI included the advancement of eleven borings: PDI-3A, PDI-7, PDI-10A1, PDI-10B1, PDI-11, PDI-12, PDI-13, PDI-14, PDI-101, PDI-102, and PDI-103. A Site plan showing the sample locations is provided as Attachment 1. The Phase II PDI borings were conducted in three mobilizations, April 2024, July 2024, and August 2024 based on access to various portions of the Site during the demolition of the existing structure at the property. All soil borings were advanced to a depth below the deepest observed impacts. The majority of the borings were advanced to 20 feet below ground surface (bgs). Borings PDI-7, PDI-11, PDI-12 and PD-14 were advanced to 15 feet bgs. Borings PDI-102 and PDI-103 were advanced to 25 feet bgs to delineate impacts identified within the 15 to 20 feet bgs interval. Boring PDI-103 was planned to be advanced to 30 feet bgs but was terminated at 25 feet bgs due to drilling refusal. Each boring was continuously logged and screened for visual and olfactory impacts. Soil samples were collected from each boring location and analyzed for semi-volatile organic compounds (SVOC), and benzene, toluene, ethylbenzene, xylenes (BTEX). Boring logs are included as Attachment 2 and an analytical data summary table is provided as Attachment 3.

Non-aqueous phase liquid (NAPL)-saturated materials were identified in the following five borings.

175 East Old Country Road, Hicksville, NY 11801
T: 516.220.4363 ■ F: 516.545-2582 ■ **Michael.Quinlan@nationalgrid.com** ■ www.nationalgrid.com

22 Oak Street Pre-Design Investigation
Phase II PDI Results Summary and Recommendations
Bay Shore/Brightwaters Former MGP Site

Boring ID	Boring Location	Depth of NAPL-Saturation (feet bgs)	Impact on IRM Limits
PD-101	Driveway Area	10-12.5	None
PDI-7	Building Footprint	7-12	None
PDI-12	Building Footprint	12-12.5	None
PDI-102	Building Footprint	7-9 and 15-20	IRM Depth Extended
PDI-14	South of Building	9-10	None

Soil boring PDI-101 was advanced to a total depth of 20 feet bgs, the 15-to-20-foot sample interval contained no physical or olfactory impacts and all photoionization detector (PID) readings were 0 parts-per-million (ppm). Soil borings PDI-7 and PDI-12 were advanced to 15 feet bgs, which was below the zone of any identified impacts in each boring that terminated at 12 and 12.5 feet bgs, respectively. NAPL saturation was identified to 10 feet bgs in PDI-14 and no impacts excluding slight odors were identified in the 10 to 15-foot interval, at which point the boring was terminated. NAPL saturation in soil boring PDI-102 ended at 20 feet bgs and no impacts were identified below that to the termination depth of 25 feet bgs.

NAPL coated materials and/or blebs were identified in the following six borings.

Boring ID	Boring Location	Depth of NAPL-Saturation (feet bgs)	Impact on IRM Limits
WC-2A	Driveway Area	12.5-15	None
PDI-102	Building Footprint	10-15	None
PDI-103	Building Footprint	5-10 and 12-15	None
WC-4A	Building Footprint	10-14	None
WC-5B	Building Footprint	10-14	None
PDI-3A	South of Building	11.5-14	IRM Limits Expanded

With the exception of the impacts noted in boring PDI-3A, all the intervals with NAPL coated materials were within the limits of the planned excavation.

BTEX compounds in all soil samples collected during the Phase II PDI were either not detected or detected below the NYSDEC Part 375 Restricted Residential Use Soil Cleanup Objectives (RUSCOs). SVOCs were only detected above the RUSCOs in soil boring PDI-3A, in the sample collected from 12 to 14 feet bgs and PDI-11 in the sample collected from 2 to 5 feet bgs. Exceedances in PDI-3A (12 to 14 feet bgs) included benzo(a)anthracene (4.6 mg/Kg), benzo(b)fluoranthene (2.0 mg/Kg), benzo(a)pyrene (2.6 mg/Kg), chrysene (4.7 mg/Kg) and indeno[1,2,3-cd]pyrene (0.81 mg/kg). Only indeno(1,2,3-cd)pyrene slightly exceeded the RUSCOs in PDI-11 (2 to 5 feet bgs). The exceedances at PDI-3A correspond to the depth of the observed impacts noted above and the excavation will be extended to remove this material.

Recommendations

The results of the Phase II PDI indicate two locations where the limits of the IRM excavation should be modified. The NAPL-saturated soils observed in PDI-102 at a depth of 15 to 20 feet are both outside and deeper than the limits of the planned 18-foot excavation cell. The planned cell will be extended to the southeast and increased to a depth of 21 feet to remove the impacted soils. The analytical results from the soil samples collected at PDI-3A indicate the extent along the southern wall of the excavation should be modified to remove impacted materials that exceed the RUSCOs.

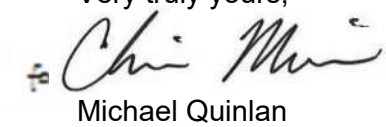
22 Oak Street Pre-Design Investigation
Phase II PDI Results Summary and Recommendations
Bay Shore/Brightwaters Former MGP Site

The NAPL-saturated soils observed in PDI-7 at a depth of 7 to 12 feet are within the planned limits of the excavation. A previous soil removal IRM was performed within the sidewalk adjacent 22 Oak Street, therefore additional excavation beyond the property limits in the direction of Oak Street is not required.

The NAPL-saturated soils observed in PDI-14 from 8 to 9.5 feet are outside of the planned excavation limits however the analytical results from soil samples collected from this boring within both the 5-10-foot and 10–15-foot bgs intervals met Unrestricted SCOs for all analytes. The analytical results of these samples indicate that the soil outside the southern limit of the proposed excavation meet the RAOs, therefore the limits of the proposed excavation are not modified.

If you have any questions, feel free to contact me at 516-220-4363 or by email at michael.quinlan@nationalgrid.com

Very truly yours,



Michael Quinlan
Senior Program Manager

- PROPOSED EXTENT OF MODIFIED EXCAVATION LIMITS
- PDI-1 — PRE-DESIGN INVESTIGATION SOIL BORING
- WCMW-18WT, WCMW-18S, WCMW-18I, WCMW-18I2, WCMW-18D — MONITORING WELL AND GROUNDWATER SAMPLE (WT=WATER TABLE, S=SHALLOW, I AND I2=INTERMEDIATE, D=DEEP)
- WCMW-03I2 — ABANDONED MONITORING WELL
- SB-B3 — 2010 POST S-ISCO® SOIL SAMPLE
- WCSB-79 — UPGRADIENT SOIL SAMPLE
- RSB24 — 2002 - 2003 SOIL BORING AND SOIL SAMPLE
- OU-4 CESSPOOL AREA
- 2011 EXCAVATION EXTENT
- 11 — APPROXIMATE ACTUAL EXCAVATION DEPTH (ft. bgs.)
- ft. bgs. — DEPTH BELOW GROUND SURFACE
- CURRENT STRUCTURE
- FORMER STRUCTURE
- PROPERTY BOUNDARY (APPROXIMATE)
- W — WATER LINE
- SAN — SEWER LINE
- G — GAS LINE
- 2005 CESSPOOL EXCAVATION EXTENT
- ST — STORM SEWER

OU-4 22 Oak Street Excavation Phase II PDI Summary
Bay Shore Former MGP Site

PDI-3A

GROUND SURFACE ELEVATION (FT): _____ **LOCATION:** See Boring Exploration Plan.
NORTHING: _____ **EASTING:** _____ **TOTAL DEPTH (FT):** 20.00
DRILLED BY: _____ **DATUM VERT. / HORZ.:** NAVD 1988 / NAD83
LOGGED BY: L. Robertson **DATE START / END:** 7/8/2024 - 7/8/2024
DRILLING DETAILS: Geoprobe/5 ft long plastic sleeves / Geoprobe 7822 DT / Core Size: 60 in. / Core Type: Macrocore
WATER LEVEL ELEVATIONS (FT): _____

DEPTH FT.	SAMPLE INFO: TYPE and NO.	PEN FT.	REC FT.	PID (ppm)	STRATA	VISUAL IMPACTS	ODOR	SOIL / BEDROCK DESCRIPTION
0	S1	5.0						S1 (0'- 5') SAND (SW); fine to coarse sand; brown, with fill (RCA/bricks).
5	S2	5.0		0.0				S2A (5'- 6') SAND (SW-SM); fine to coarse sand; brown, some silt and gravel.
				0.8				S2B (6'- 7.5') SAND (SW-SM); fine to coarse sand; tan, some silt and gravel.
				10.9			NLO	S2C (7.5'- 10') SAND (SW-SM); fine to coarse sand; slight naphthalene-like odor, black, some silt.
10	S3	5.0		20.9			NLO	S3A (10'- 11.5') SAND (SW); fine to coarse sand; strong naphthalene-like odor, brown.
				29.6			NLO	S3B (11.5'- 14') SAND (SW-SM); fine to coarse sand; strong naphthalene-like odor, brown and tan, some silt and gravel. NAPL coating.
				0.9			NLO	S3C (14'- 15') SAND (SW-SM); fine to medium sand; slight naphthalene-like odor, brown, some silt.
15	S4	5.0		0.0				S4 (15'- 20') SAND (SW-SM); fine to coarse sand; tan, some silt and gravel.
20								Bottom of borehole at 20.0 feet. End of Boring. Backfilled with sand.

NOTES:

PEN = PENETRATION LENGTH OF SAMPLER
REC = RECOVERY LENGTH OF SAMPLE
PID = PHOTOIONIZATION DETECTOR READING (JAR HEADSPACE)

ppm = PARTS PER MILLION
IN. = INCHES
FT. = FEET

Notes:

Analytes in blue are not detected in any sample

mg/kg = milligrams/kilogram or parts per million (ppm)

BTEX = Benzene, Toluene, Ethylbenzene, and Xylenes

ND = Not Detected

NE = Not Established

Q= Qualifier

Bolding indicates a detected result concentration

Shading and bolding indicates that the detected concentration is above the NYSDOH guidance it was compared to

Qualifiers:

J = The result is an estimated value.

U = The result was not detected above the reporting limit.

Notes:

Analytes in blue are not detected in any sample

mg/kg = milligrams/kilogram or parts per million (ppm)

BTEX = Benzene, Toluene, Ethylbenzene, and Xylenes

ND = Not Detected

NE = Not Established

Q= Qualifier

Bolding indicates a detected result concentration

Shading and bolding indicates that the detected concentration is above the NYSDOH

Qualifiers:

J = The result is an estimated value.

U = The result was not detected above the reporting limit.

22 Oak Street Pre-Design Investigation
Phase II PDI Results Summary and Recommendations
Bay Shore/Brightwaters Former MGP Site
Bay Shore, New York
Site No. 1-52-172
Order on Consent Index No. D1-0001-98-11

Dear Mr. Ayers:

National Grid has prepared this letter to summarize Phase III of the Pre-Design Investigation (PDI) at the 22 Oak Street property (the Site), located within the Operable Unit 4 (OU-4) area of the Bay Shore/Brightwaters Former Manufactured Gas Plant (MGP). The Phase III PDI was performed to support further delineation of the limits of the New York State Department of Environmental Conservation (NYSDEC) approved Interim Remedial Measure (IRM) for the Site as described in National Grid's PDI Phase II Summary Comment Response Letter submitted to NYSDEC via email on October 11, 2024. Field work was completed on October 12, 2024 and October 21, 2024. The work was completed per the modification conditions in the Department's Comment Letter dated October 1, 2024 and in-person discussions at the Site on Tuesday, October 8, 2024 between NYSDEC, National Grid, and GEI Consultants, Inc. (GEI).

Phase III PDI Activities and Findings

The Phase III PDI focused on further defining the limits of the excavation boundary for the NYSDEC-approved IRM. Each boring was continuously logged and screened for visual and olfactory impacts. A figure showing boring locations and the boring logs are included as Attachments 1 and 2, respectively. The Phase III PDI included the advancement of the following six planned borings:

- PDI-15, PDI-16, and PDI-17 were advanced to a depth of 15 feet to delineate suspected MGP impacts noted in PDI-14 along the southern edge of the planned excavation and logged to visually determine the presence of grossly MGP-impacted material.
- PDI-18 was advanced to a depth of 20 feet to delineate suspected MGP impacts noted in PDI-3A to define the extent of the southern edge of the planned excavation. Two soil samples were collected and analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and polycyclic aromatic hydrocarbons (PAH).
- PDI-19 and PDI 20 were advanced beyond PDI-11 and PDI-12 to confirm the lack of MGP-impacted material along the southwest edge of the excavation. PDI-19 was advanced to a depth of 5 feet and one soil sample was collected and analyzed for BTEX and PAH. PDI-20 was advanced to 20 feet and logged to visually determine the presence of grossly MGP-impacted material.

175 East Old Country Road, Hicksville, NY 11801

22 Oak Street Pre-Design Investigation
Phase III PDI Results Summary and Recommendations
Bay Shore/Brightwaters Former MGP Site

Soil borings PDI-15 and PDI-16, located along the southern edge of the excavation, both contained no physical impacts but did exhibit petroleum-like odors at various depth intervals. No MGP related impacts were observed at these locations.

Petroleum-coated materials were identified in soil borings PDI-17 and PDI-18. Petroleum-coated materials were observed from 7 to 10 ft bgs in boring PDI-17. No impacts excluding slight odors were identified in the 10 to 15-foot interval, at which point the boring was terminated at the planned depth. Petroleum-coated materials were also observed in soil boring PDI-18 from 6 to 7.8 ft bgs. Two soil samples were collected from this location, one from the 6-9 ft bgs interval with the observed coated materials, and one from the 12-14 ft bgs interval beneath the impacted zone.

An offset boring, PDI-18 Offset, was installed approximately 5 ft further away from the excavation limits to continue to investigate the limits of impacts in the area. Petroleum-coated materials were observed in the PDI-18 Offset boring from 3 to 5 ft bgs. An additional offset boring, PDI-18 Offset-2, was installed approximately 5 feet further from the excavation limits. There were no visual impacts notes in PDI-18 Offset-2. A soil sample was collected from PDI-18 Offset-2 from 7 to 10 ft bgs.

On October 21, 2024, additional soil borings (PDI-17R, PDI-17R Offset, PDI-18R, and PDI-18R Offset) were advanced in the vicinity of the PDI-17 and PDI-18 locations to confirm the presence and nature of impacts observed on October 12. Impacts noted in the PDI-17R location were limited to strong petroleum-like odors from 5 to 5.5 ft bgs. A sample was collected for analysis for volatile organic compounds (VOCs) and PAH from this interval because a soil sample was not collected on October 12. PDI-17R Offset was installed approximately 8 feet away from PDI-17R and similar to PDI-17R, impacts were limited to odors. Similar to the original PDI-18 boring, petroleum-coated soils were observed in PDI-18R from a depth of 7 to 7.5 ft bgs. A sample was collected for analysis for VOCs and PAH from this interval. PDI-18R Offset was installed approximately 8 feet away from PDI-18R and impacts were limited to petroleum-like odors.

BTEX compounds were not detected in all soil samples collected during the Phase III PDI. SVOC compounds were either not detected or were detected below the RUSCOs in all soil samples collected during the Phase III PDI. Acetone was detected above the Unrestricted Use SCO in soil sample PDI-18R (7-8'). Acetone is a solvent commonly utilized in cleaning laboratory equipment and is assumed to be anomalous. Analytical results for the soil samples are included as Attachment 3.

In addition to the BTEX and PAH samples, the PDI-18 (6-9'), PDI-18 (12-14'), PDI-18 offset-2 (7-10'), and PDI-17R (5-5.5') samples were analyzed for Fingerprint analysis via EPA 8015. The PDI-19 (6-9') and PDI-18 offset-2 (7-10') samples contained petroleum products that most closely resemble diesel and/or #2 fuel oil. The PDI-18 (12-14') sample was not able to be matched to a product in the laboratory's reference library. The PDI-17R (5-5.5') sample contained petroleum products which most closely resembled gasoline and motor oil.

Soil borings PDI-19 and PDI-20, located along the southwestern edge of the excavation, both contained no physical or olfactory impacts, and all photoionization detector (PID) readings were 0 parts-per-million (ppm).

22 Oak Street Pre-Design Investigation
Phase III PDI Results Summary and Recommendations
Bay Shore/Brightwaters Former MGP Site

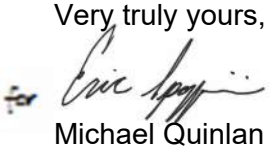
Recommendations

The results of the Phase III PDI confirm that the southwestern edge of the excavation meets the remedial goals of the IRM. The analytical results from the soil sample collected from PDI-19 and the visual impacts noted in PDI-20 bound the impacts noted in PDI-11 and PDI-12.

Petroleum-coated soils were noted in soil borings PDI-17, PDI-18, PDI-18R, and PDI-18 Offset. Fingerprint analyses support that remnant impacts in soils to the southeast of the excavation most closely resemble diesel and/or #2 fuel oil and are not related to the operations of the former MGP. In accordance with the approved IRM Work Plan, the remedial goals for the Site are to remove MGP-impacted material, therefore additional excavation to the southeast of the current excavation limits is not required to meet the RAOs. As discussed on Site on Tuesday, October 8, 2024 between NYSDEC and National Grid, a single 8-foot by 12-foot by 15-foot deep cell will be added adjacent to Cell 37 to remove impacted materials noted in soil boring PDI-14.

If you have any questions, feel free to contact me at 516-220-4363 or by email at michael.quinlan@nationalgrid.com

Very truly yours,



Michael Quinlan
Senior Program Manager

Re**: 22 Oak Street Pre-Design Investigation**
Phase II PDI Results Summary
Bay Shore/Brightwaters Former MGP Site
NYSDEC Site #152172

Dear Mr. Quinlan,

The New York State Department of Environmental Conservation and the New York State Department of Health have reviewed the Phase II Pre-Design Investigation (PDI) Results Summary prepared for the 22 Oak Street property located within the Operable Unit 4 (OU-4) area of the Bay Shore/Brightwaters Former Manufactured Gas Plant (MGP) site, dated September 13, 2024. Based on the information provided, the NYSDEC finds the PDI acceptable with the following conditions:

1) The proposed extent of the excavation (brown line) on the southwestern side as shown on Figure 1 differs from the excavation plan extent provided on the waste characterization sampling figure prepared by GEI and the excavation plan presented in the Posillico Environmental Standard Operations Plan. Please adjust accordingly.

2) The sample depth for Soil Sample PDI-13 needs to be included on Table 1.

3) Based on the PDI soil boring logs and sampling data provided in the PDI Summary Report, the extent of the NAPL saturated soil as observed in Soil Boring PDI-7, PDI-12, PDI-3A, and PDI-14 in the southwest and southeast direction was not determined. In addition, the Soil Samples PDI-11 (2'-5') and PDI-3A (12'-14') exhibited concentrations of PAHS above the Restricted-Residential Use Soil Clean-Up Objectives (SCOs). As such, confirmation soil sampling is required along the southwestern and southeastern portion of the excavation sidewall beyond PDI-11 and PDI-12 at approximately 4 feet below grade (ft bg) and 12 ft bg, and beyond Soil Boring PDI-3A at approximately 13 ft bg.

If you have any questions regarding this letter or any other aspect of the project, please don't hesitate to call me at 518-402-6447 or e-mail me at matthew.ayers@dec.ny.gov.

Sincerely,

Matthew Ayers
Project Manager

22 Oak Street Pre-Design Investigation
PDI Phase II Summary Comment Response Letter
Bay Shore/Brightwaters Former MGP Site
Bay Shore, New York
Site No. 1-52-172
Order on Consent Index No. D1-0001-98-11

Dear Mr. Ayers:

This letter addresses comments provided by New York Department of Environmental Conservation (NYSDEC) as provided in the Department's October 1, 2024 letter on the Phase II Pre-Design Investigation (PDI) Results Summary at the 22 Oak Street property, located within the Operable Unit 4 (OU-4) area of the Bay Shore/Brightwaters Former Manufactured Gas Plant (MGP). A summary of the comments and individual responses to the comments are presented below. For ease in reviewing this letter, the comments are presented in italic font followed by National Grid's Response.

Comment 1

The proposed extent of the excavation (brown line) on the southwestern side as shown on Figure 1 differs from the excavation plan extent provided on the waste characterization sampling figure prepared by GEI and the excavation plan presented.

Response 1:

Figure 1 has been updated so the excavation limits is consistent with the other figures and construction drawings provided.

Comment 2

The sample depth for Soil Sample PDI-13 needs to be included on Table 1.

Response 2:

The sample depth for Soil Sample PDI-13, 8 to 10 feet below ground surface (bgs), has been added to Table 1.

Comment 3

Based on the PDI soil boring logs and sampling data provided in the PDI Summary Report, the extent of the NAPL saturated soil as observed in Soil Boring PDI-7, PDI-12, PDI-3A, and PDI-14 in the southwest and southeast direction was not determined. In addition, the Soil Samples PDI-11 (2'-5') and PDI-3A (12'-14') exhibited concentrations of PAHS above the Restricted-Residential Use Soil Clean-Up Objectives (SCOs). As such, confirmation soil sampling is required along the southwestern and southeastern portion of the excavation sidewall beyond PDI-11 and PDI-12 at

175 East Old Country Road, Hicksville, NY 11801
T: 516.220.4363 ■ F: 516.545-2582 ■ **Michael.Quinlan@nationalgrid.com** ■ www.nationalgrid.com

approximately 4 feet below grade (ft bg) and 12 ft bg, and beyond Soil Boring PDI-3A at approximately 13 ft bg.

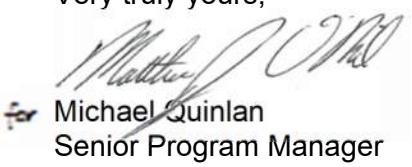
Response 3:

Additional soil borings will be conducted to address Comment 3 as discussed on Site on Tuesday, October 8, 2024 by NYSDEC, National Grid, and GEI. The planned borings will be installed as follows, in accordance with discussion and the drawing markup attached to this letter:

- Confirmation soil sampling in the southwest direction will be performed beyond PDI-11 and PDI-12. One soil boring beyond PDI-11 will be advanced to 5 feet bgs and one soil sample will be collected and analyzed for BTEX and PAH. One soil boring beyond PDI-12 will be advanced to 20 feet bgs to visually determine the presence of grossly MGP-impacted material. Both soil borings will be installed as close to the edge of the excavation as can be performed safely.
- One soil boring will be performed beyond PDI-3A to determine the extent of NAPL saturated soils in the southeast direction. The soil boring will be advanced to 20 feet bgs and one soil sample will be collected and analyzed for BTEX and PAH in the 12'-14' interval. The soil boring will be installed approximately 10 feet southeast of PDI-3A, along the limit of the planned excavation cell.
- Three soil borings will be performed beyond PDI-14 to determine the extent of NAPL saturated soils in the southeast direction. Each soil boring will be advanced to 15 feet bgs to visually determine the presence of grossly MGP-impacted material. Each soil boring will be installed approximately 10 feet from limit of the planned excavation.

National Grid is requesting approval of these comments and the suggested soil investigation so that the investigation may be performed on Saturday, October 12, 2024. If you have any questions, feel free to contact me at 516-220-4363 or by email at michael.quinlan@nationalgrid.com.

Very truly yours,



for Michael Quinlan

Subject: [EXT] Bayshore OU-4 Former MGP (152172) - PDI - III Summary Letter

EXTERNAL EMAIL

Mike,
Based on review of the data and figures provided in the Phase III PDI mobilization summary letter report dated October 28, 2024, the western edge of the excavation (adjacent to PDI-19 and PDI-20) does not require additional excavation, however please add three (3) additional cells to the south of and corresponding to the existing Cells #36, 37, and 38 to cover the deeper impacts observed at Soil Boring PDI-14, PDI-15 and PDI-17.

Let me know if you have any questions.

Regards,

Matthew Ayers, P.G.

You don't often get email from espazzarini@geiconsultants.com. Learn why this is important

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good afternoon Matt,

Attached you will find Request to Import forms for the proposed backfill materials for the upcoming IRM at 22 Oak Street. We have submitted two materials for each the granular fill and gravel fill described in the IRMWP, for your

review and approval. We likely will not be importing all four materials and are coordinating with the property owner which materials will meet their requirements for redevelopment.

Please let me know if you have any questions or concerns with these backfill materials.

Thanks,

GEI

Greg, comments received from our Geotech:
No objection to either of the common fill options or the 3/4" gravel specification, looks good to me.

For the 3/8" gravel, I'm assuming this is meant to be in place of the structural fill specification? If so, still no objection. Otherwise, please provide a specification for the structural fill at your earliest convenience.

Subject: RE: [EXTERNAL] Backfill Requirements: 22 Oak St., Bay Shore, NY

Mr. Collins,

GEI has reviewed backfill material submittals for the upcoming soil removal project. The remedial contractor has submitted gradation and compaction test results for two products for both the Common Fill and Gravel Fill materials required for the work, attached. We have assembled the attached table comparing the gradation results of each material to the requirements of our specification and the requirements passed along to us from your structural engineer.

The Pinelawn Common Fill and the Posillico Wash Plant 3/8-inch gravel materials most closely meet both sets of specifications. Can you please forward the attached to your engineering team to confirm that these two materials are suitable for your use?

Thanks,

GEI

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e) and 6NYCRR Part 360.13. Use of this form is not a substitute for reading the applicable regulations and Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Residential Use

Have Ecological Resources been identified? no

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? >1000

If greater than 1000 cubic yards will be imported, enter volume to be imported: 2,700 CY

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? yes

Does it contain less than 10%, by weight, material that passes a size 100 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

The proposed import material meets the requirements of DER-10 section 5.4(e)5, therefore, no chemical testing is required.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.4(e)5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

The proposed import material meets the requirements of DER-10 section 5.4(e)5, therefore, no chemical testing is required.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Posillico Wash Plant

Location where fill was obtained:

Farmington, New York

Identification of any state or local approvals as a fill source:

NYSDEC Permit #1-4720-00695/00009

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Submittal 008.3 - Posicillo Wash Plant 3/4" Gravel Fill - option 1
NYSDEC Permit Renewal Documentation

The information provided on this form is accurate and complete.

Posillico | We know how.

September 20th, 2023

Matt O'Neil | GEI Consultants

Matt,

This letter is regarding 3/4" washed, recycled gravel products proposed to be supplied to the National Grid Former Bay Shore MGP OU-4 Facility located at 22 Oak Street in Bay Shore, New York from Posillico Materials' Wash Plant in Farmingdale, New York.

Posillico Materials, LLC is committed to maintaining an eco-friendly construction materials recycling facility in Farmingdale, New York. We produce high quality recycled sands & aggregates that are primarily consumed by the Long Island, Queens, and Brooklyn construction markets.

The Wash Plant sources raw materials from local excavation activities in accordance with our permit. The facility is permitted by the NYSDEC as a Part 360 Solid Waste Management Facility (Permit #1-4720-00695/00009). All prospective inbound material is thoroughly vetted prior to acceptance into the facility, enabling us to safely process recyclable material that would otherwise be permanently disposed of in a landfill. Therefore, our products are made from 100% post-consumer waste.

We process the out-of-spec raw material through our closed-loop, zero-discharge soil washing plant that is the largest and most technologically advanced of its kind in the world. The plant separates and sorts the materials by particle size and density, allowing for the precise extraction of in-spec saleable construction materials.

All of our aggregate products are decontaminated through the Wash Plant prior to sale, where they are subjected to a vigorous wet screening and attrition process for silt and clay separation, magnetic separation of ferrous metals, density separation for organic & lightweight removal, manual picking for quality control, and lastly dewatered & screened to size. All the gravel that the Posillico Wash Plant produces meet the requirements of NYSDEC Technical Guidance for Site Investigation & Remediation DER-10 section 5.4(e)5., meaning that no chemical testing is required on this material.

Attached are our quality control reports for your reference. If you require any additional information, please do not hesitate to give me a call.

Sincerely,

Rob Tassey

Re: Application #1-4720-00695/00009
Posillico Soil Wash Facility Permit Renewal

Dear Permittee:

In conformance with the requirements of the State Uniform Procedures Act (Article 70, ECL) and its implementing regulations (6NYCRR, Part 621) we are enclosing your renewed permit identified above. Please carefully read all permit conditions and the schedule contained in the permit carefully to ensure compliance during the term of the permit. If you are unable to comply with any conditions, please contact us at the above address.

This permit must always be kept available on the premises of the facility.

Sincerely,

Elyssa Scott
Environmental Analyst

PERMIT
Under the Environmental Conservation Law (ECL)

Permittee and Facility Information

Permit Issued To:
POSILLICO MATERIALS, LLC
1750 NEW HWY
FARMINGDALE, NY 11735-1510
(631) 249-1872

Facility:
POSILLICO MATERIALS LLC
1610 NEW HWY
FARMINGDALE, NY 11735

Facility Application Contact:
THOMAS J POSILLICO
Posillico Materials East LLC
1750 New Hwy
Farmingdale, NY 11735-1562
(631) 390-5762

Facility Location: in BABYLON in SUFFOLK COUNTY
Facility Principal Reference Point: NYTM-E: 633.8 NYTM-N: 4511.5
Latitude: 40°44'36.9" Longitude: 73°24'54.8"

Authorized Activity: The permittee is authorized to operate a solid waste management facility receiving and processing the following:

a. 500 cubic yards per day based on a two week average, with a maximum of 850 cubic yards in any day, of recognizable uncontaminated concrete, asphalt, rock, brick, and soil (RUCARBS). An additional 2,000 cubic yards per day based on a two week average, with a maximum of 4,000 cubic yards in any day, of asphalt or recycled asphalt pavement (RAP) may also be received.

b. 2,000 cubic yards per day based on a two week average, with a maximum of 3,000 cubic yards on any day, of fill material destined to the soil wash plant. The fill material includes petroleum contaminated soil (PCS), contaminated fill material or soil, navigational dredged material, vacuum truck slurry material, general fill, and uncontaminated fill material or soil.

Solid Waste Management Activity No(s).:
Construction and Demolition Debris Handling and Recovery - 52CP0259

Facility Owner/Operator: Posillico Materials LLC is the facility owner and operator for the contaminated soil area, soil wash plant, RUCARBS Areas #1 and #2, and asphalt plant areas. Con-Strux, LLC is limited to being the operator of RUCARBS Area #3. These areas are described in the approved Engineering Report, Site Plans, and related documents.

Permit Authorizations

Solid Waste Management - Under Article 27, Title 7
Permit ID 1-4720-00695/00009
Renewal Effective Date: 5/4/2023 Expiration Date: 5/3/2028

NYSDEC Approval

By acceptance of this permit, the permittee agrees that the permit is contingent upon strict compliance with the ECL, all applicable regulations, and all conditions included as part of this permit.

Permit Administrator: KEVIN A KISPERT, Deputy Regional Permit Administrator
Address: NYSDEC Region 1 Headquarters

Permit Components

SOLID WASTE MANAGEMENT PERMIT CONDITIONS

GENERAL CONDITIONS, APPLY TO ALL AUTHORIZED PERMITS

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

SOLID WASTE MANAGEMENT PERMIT CONDITIONS

1. **Conformance With Plans** All activities authorized by this permit must be in strict conformance with the permit application, plans and materials prepared by permittee or permittee's consultant on the date(s) specified in Permit Condition No. 2.

2. **Terms of Operation, Approval for Changes** The facility shall be operated in conformance with:

   a. Terms and conditions of this permit;

   b. 6NYCRR Part 360 Solid Waste Management Facilities regulations;

   c. The approved Engineering Report, revised October 2022, prepared by Robert S. Keane, P.E.

Any revision to the above approved documents identified in item (c) of this condition or to the operations at this site requires prior written approval from the Department. If these documents conflict with any condition of this permit, the permit condition shall prevail. Furthermore, the permittee must comply with a permit condition that is more stringent than a regulatory requirement.

The permittee shall not add a facility component that would otherwise qualify as an exempt or registered facility, unless the permittee first receives a modified permit to incorporate the additional component of the operation.

3. **Authorized Activity** The permittee is authorized to operate a solid waste management facility receiving and processing the following:

   a. 500 cubic yards per day based on a two week average, with a maximum of 850 cubic yards in any day, of recognizable uncontaminated concrete, asphalt, rock, brick, and soil (RUCARBS). An additional 2,000 cubic yards per day based on a two week average, with a maximum of 4,000 cubic yards in any day, of asphalt or recycled asphalt pavement (RAP) may also be received.

   b. 2,000 cubic yards per day based on a two week average, with a maximum of 3,000 cubic yards on any day, of fill material destined to the soil wash plant. The fill material includes petroleum contaminated soil (PCS), contaminated fill material or soil, navigational dredged material, vacuum truck slurry material, general fill, and uncontaminated fill material or soil.

4. **Other Activities** The permittee also conducts non-solid waste management facility operations at the site. These activities include receiving and processing of natural stone and sand from mining activities, and operation of an asphalt plant.

5. **Unacceptable Wastes** The permittee is prohibited from accepting friable asbestos-containing waste, ash residue, radioactive waste, hazardous waste, industrial waste, regulated medical waste, liquid waste, septage, sewage sludge, yard trimmings, tree debris, municipal solid waste (MSW), construction and demolition debris other than RUCARBS and fill material, and any other waste not specifically authorized for receipt.

6. **Soil Wash Plant Operations** All activities related to the soil wash plant must comply with the following requirements:

a. Waste Handling Requirements

i. All contaminated fill material and filter cake must be stored inside the contaminated soil storage building. Uncontaminated fill material may be stored outside of the building in RUCARBS Area #2.

ii. All activities with respect to contaminated fill material must take place on an concrete pad. All containment pads, liners, and enclosures must be constructed and maintained in accordance with the most current Suffolk County Department of Health Article 12 Permit.

iii. Vacuum truck slurry may only be tipped at the HydroTip pad area used for dewatering prior to storage inside the contaminated storage building.

iv. At the end of each day, and as needed throughout the workday, the site shall be swept clean.

v. The permittee shall ensure that the all storage areas which contain contaminated material is labeled on all sides with "Contaminated Soil Storage" and must be easily readable from a distance of 25 feet.

b. Analytical Sampling Requirements

i. Prior to receiving contaminated fill material, it must be sampled and analyzed at the generating site and shown to be non-hazardous. All sampling procedures, methods, and analysis must be acceptable to the Department, and must demonstrate the material qualifies for acceptance by the permittee under this permit.

ii. Fill material or soil contaminated with No. 2 fuel oil from residential properties, and fill material or soil generated from roadside spills contaminated with diesel fuel may be received without chemical analysis, provided a Department Spill Number is generated from the spill location. This provision does not apply to spills generated on industrial properties.

iii. Vacuum truck slurry waste generated from locations with minimal potential for contamination, and which does not exhibit visual or other indication of contamination, does not require chemical sampling prior to receiving.

iv. Navigational dredged material requires sampling prior to receipt. If the material meets the requirement of containing greater than 90% sand and gravel, as determined by grain size analysis, and contains less than 0.5% total organic carbon, it may be received without further sampling. Material exceeding these parameters must be sampled consistent with paragraph (b)(i) of this condition.

v. Inbound General Fill to RUCARBS Area #2 is subject to the RUCARBS Waste Handling and Quality Assurance Requirements for RUCARBS as outlined in this permit.

7. **Operations Related to Recongizable Uncontaminatd Concrete, Asphalt Pavement, Rock, Brick, and Soil (RUCARBS)** Operations related to RUCARBS, which includes asphalt or RAP, and general fill, must comply with the following:

a. Waste Handling Requirements

i. All activities related to RUCARBS may be conducted outdoors.

ii. At the end of each workday the facility and tipping areas shall be cleaned of any solid waste. All overnight storage of solid waste shall be in its respective storage area.

b. Quality Assurance of Incoming RUCARBS

The permittee shall ensure that waste control procedures acceptable to the Department are implemented to ensure that all incoming RUCARBS is acceptable pursuant to this permit. The Department may require the permittee to comply with paragraphs (i) and (ii) below for the receipt of solid waste from any source of solid waste to ensure conformance with this permit, and disapprove the permittee's acceptance of the solid waste or require removal of non- conforming solid waste, if already accepted at the facility.

i. Analytical sampling may be required for solid waste received from certain sources to ensure it is suitable for the facility to accept. All sampling must be done in accordance with Department approved methods. Unless otherwise approved by the Department on a case specific basis, such sampling shall be done at a minimum rate of one sample per 1,000 cubic yards. The Department reserves the right to reject any sampling results, when the sampling is not coordinated with the Department.

ii. Documentation regarding the generators of incoming solid waste, which may include, but not be limited to:

- Name of the generator of the material and contact information.
- The exact location of the generating site. Type of generating site such as excavation, building demolition/deconstruction site, solid waste management facility, road work, etc. If the site is a solid waste management facility, provide the facility's permit number or registration number.

- Description of the site history such as industrial, commercial, residential, road construction, solid waste management facility, etc.
- Any analytical results performed at the generating site accompanied by any other reports prepared by the generating site engineer or qualified environmental professional, if done at the generating site.
- Amount and type of the material that the site will generate.

8. **Requirements for All Facility Operations** The permittee shall comply with the following:

a. Contaminated soil and contaminated fill material must be kept separate from RUCARBS and other uncontaminated material at all times. In the event contaminated soil or contaminated fill material becomes commingled with uncontaminated material, the whole pile must be considered contaminated, and managed as such.

b. The permittee must ensure that trucks entering the facility do not queue on offsite roadways.

c. The permittee must ensure that trucks do not track dirt and mud out of the facility onto offsite roadways.

d. Unprocessed RUCARBS materials must be processed within 365 days of receipt. Processed materials shall not remain onsite for more than 365 days, unless otherwise approved by the Department.

9. **Use of Tracking Documents** The Department reserves the right to require the permittee to have incoming or outgoing loads accompanied with complete tracking documents. However, contaminated soil or contaminated fill material must have complete tracking documents for both incoming and outgoing loads, and all non-contaminated loads coming from or going to other solid waste management facilities must also be accompanied with a complete tracking document. All tracking documents must be acceptable to the Department. The names of all individuals required to sign the tracking document (generator, hauler, and receiving facility representatives) must be neatly printed, in addition to their signatures.

10. **Outgoing Fill Material Analysis Requirements** The permittee must analyze all outbound fill material, soil and/or wash plant sand in accordance with the following:

a. Material destined for use as fill material, including wash plant sand destined for use in or as fill material, or soil to be amended with yard waste or compost, must be sampled at a rate of no less than one analysis per 1,000 cubic yards.

b. Material including wash plant sand destined for use as commercial aggregate in concrete or asphalt manufacturing must be sampled at a rate of no less than one analysis per 5,000 cubic yards.

c. All sampling must be done in accordance with provisions of applicable regulations and procedures acceptable to the Department. The permittee must ensure unanalyzed fill material is stored separately and distinctly from other waste onsite. After receipt of results demonstrating qualification for the intended use, the permittee may consolidate the fill material, or amend with yard waste or compost, accordingly. If unanalyzed fill material is commingled with material already analyzed, then the entire pile must be reanalyzed.

11. **Maximum Quantity Onsite** The permittee shall not exceed the following quantities onsite:

a. Soil Wash Plant; Contaminated Storage Building:

i. 3,940 cubic yards of PCS.
ii. 4,640 cubic yards of contaminated soil or fill material.
iii. 2,520 cubic yards of soil wash filter cake.
iv. 6,340 cubic yards of stone and 5,730 cubic yards of sand in the Wash Plant outbound areas.

b. RUCARBS Area #1: 8,400 cubic yards of RUCARBS, no more than 4,950 unprocessed.

c. RUCARBS Area #2: 19,150 cubic yards of uncontaminated soil or general fill

d. RUCARBS Area #3: 12,670 cubic yards of RUCARBS with no more than 10,100 unprocessed.

e. 42,420 cubic yards of RAP, asphalt, and millings that is separate from other RUCARBS, with no more than 34,000 cubic yards unprocessed.

12. **Hours of Operation** Hours of operation shall not conflict with any local laws or ordinances. The permittee's hours and days of operation are as follows:

a. The receipt of fill material at the soil wash plant may be received from 6:00 AM to 4:00 PM, Monday through Friday, and 6:00 AM to 3:00 PM on Saturday. If fill material is received outside of these hours of operation, other than New York State Department of Transportation or Metropolitan Transportation Authority projects, a minimum of 48 hours notice shall be provided to the Department, and such notice shall include the anticipated date(s) and time(s) of receipt.

b. RUCARBS may be received and processed 24 hours per day, 7 days per week.

13. **Signs** The permittee must post clearly legible signs indicating hours of operation, the types of waste accepted, and the types of waste not accepted. The signs shall be located so that they are visible to any vehicles and/or persons approaching the facility.

14. **Waste Control** An attendant shall be on duty during all hours of operation. The attendant shall inspect all vehicles entering the facility, rejecting any loads containing unauthorized material.

15. **Control of Nuisance Conditions** Odors, dust, insects, vectors, noise, blowing litter and other potential nuisances shall be adequately controlled at all times. The permittee shall immediately implement any controls required by the Department including cessation of facility operations.

16. **Fire Protection and Detection** The permittee shall maintain fire protection and detection equipment in accordance with local laws and ordinances.

17. **Cessation of Operations** The permittee must notify the Department immediately of any event which causes an unscheduled facility shutdown that exceeds 24 hours, as well as indicate the proposed waste management activities. A written report must be submitted to the Department within 7 days of the event.

18. **Ultimate Disposal of Waste** All solid waste passing through the facility that does not qualify for a beneficial use must be ultimately disposed of at a facility authorized by the Department if located in New York State, or by the appropriate governmental agency or agencies if in other states, territories, or nations. All waste destined for beneficial use must meet the requirements of a predetermined or case-specific beneficial use determination.

19. **Unauthorized Waste** In the event that any hazardous waste, medical waste, or other regulated waste not allowed under this permit is accepted at the facility, the unauthorized waste shall be contained and properly secured immediately. The permittee shall notify the Department and the Suffolk County Department of Health Services within 24 hours of the event. The waste material shall be removed by a waste transporter authorized under 6 NYCRR Part 364 to transport such waste. A written report shall be submitted to the Department within 7 days of the event.

20. **Small Spill Containment** The facility shall keep available at the site equipment and materials necessary to contain small quantities of chemicals or spills. These materials shall be stored in well identified accessible storage areas. As a minimum, the following must be available at all times:

4 - 55 gallon drums with covers and securing rings
400 lbs. absorbent material (e.g. Speedi-Dri)

50 lbs. Boric Acid
50 lbs. Sodium Bicarbonate
Assorted brooms, shovels, gloves, masks, and other protective gear

21. **Maintenance and Repair of Facility** The permittee shall adequately maintain and make repairs to the facility as necessary. This includes any part of the facility, such as doors to buildings; odor and dust controls and equipment; punctures, holes, or other damage to buildings; minimizing the ponding of stormwater; and concrete and/ or asphalt pavement that becomes damaged or worn.

The permittee shall undertake all repairs immediately and have all work completed within one week. Repairs related to dust or odor controls must be completed within 24 hours. If the permittee is unable to complete repairs within the specified time outlined by this condition, the permittee shall provide an acceptable schedule to the Department which shall include a description of the work to be completed and any controls that will be implemented to ensure the facility remains in compliance with this permit, including the cessation of all or part of the facility operations.

22. **Recordkeeping Requirements** The permittee shall maintain the following records at the facility for a minimum of 7 years from the date of creation and be available immediately to the Department upon request:

a. Daily log of solid waste received and transported from the facility which includes:

   i. Type, quantity, planning unit, and origin of the solid waste received.

   ii. Destination of all solid waste and recovered materials transported from the facility.

   iii. The following additional information for incoming PCS: NYSDEC Spill Number, type of fuel contamination (ie: gasoline, #2 oil), source of contamination (ie: UST, surface spill)

b. All weight tickets, hauling receipts, disposal receipts, invoices, tracking documents, etc. to support entries made into the daily log.

c. All analytical sampling results for incoming fill material, if required, and outgoing fill material, and Spill Response Engineer certification letters.

23. **Notification and Reporting Requirements** These requirements include the following:

a. The permittee must maintain the required Suffolk County Department of Health Article 12 permit. The most recent Article 12 permit must be maintained on file with the Region 1 Office.

b. The permittee shall notify the Department 5 days in advance of any sampling required by this permit to offer the Department the opportunity to witness sampling and, if desired, collect split samples.

c. Upon receiving any sample results, the permittee must provide the results to the Department in a format prescribed by or acceptable to the Department.

d. The permittee must submit the original copy of the annual report to the Region 1 Office, and a copy to the Central Office. The report must be submitted no later than March 1 following each year of operation on forms prescribed by or acceptable to the Department.

e. All notifications and submittals to the Department shall be to the Region 1 Office located at the New York State Department of Environmental Conservation, Division of Materials Management, 50 Circle Road, SUNY @ Stony Brook, NY 11790, or electronically as directed by Department staff. The annual report may be submitted via email to SWMFAnnualReportR1@dec.ny.gov.

f. A copy of the annual report shall be sent to SWMFannualreport@dec.ny.gov.

24. **Financial Assurance** The permittee shall maintain the financial assurance in the amount of at least $2,687,440. Each year thereafter, the permittee must submit for review and approval adjusted closure costs estimates, including supporting justification to account for inflation and changes in facility conditions, and increase the amount once approved by the Department. The Department reserves the right to adjust the amount of the financial assurance in the future to account for increases in closure costs, and for non-compliance with any conditions of this permit and any requirement of 6 NYCRR Part 360.

In the event that the permittee fails to maintain financial assurance as required by this permit, the permittee must immediately cease accepting solid waste until financial assurance acceptable to the Department is in place. Within 10 days from the cessation of the required financial assurance, the permittee shall have all solid waste, including recovered recyclables, removed from the facility and the facility shall be in "broom clean" condition.

25. **Environmental Monitor** The environmental monitor shall be funded in accordance with the following for operations directly related to the permittee:

a. The permittee shall fund environmental monitoring services to be performed by or on behalf of the Department. These monitoring services will include, but not be limited to, the scope of work in an annual environmental monitoring work plan which is incorporated by reference and enforceable under this permit.

b. The permittee shall provide to the Department on an annual basis the funds necessary to support the activities set forth in the annual environmental monitoring work plan. The sum to be provided will be based on the annual budgeted amount and is subject to annual revision. Subsequent annual payments shall be made for the duration of this permit or until the environmental monitoring services are no longer necessary, whichever comes first.

c. The permittee shall be billed annually, prior to the start of each State Fiscal Year (SFY) (April 1). If this permit is to first become effective subsequent to April 1, the initial bill will be for an amount sufficient to meet the anticipated cost of the environmental monitoring services through the end of the current SFY.

d. The Department may revise the required annual bill on an annual basis to include all of the Department's estimated costs associated with the environmental monitoring services. The annual revision may take into account such factors as inflation, salary increases, changes in the fringe benefits rate, changes in operating hours and procedures, changes in non-personal service costs (including travel, training, sampling and analytical, and equipment costs, etc.), an increase or decrease in the level of environmental monitoring services necessary, and an increase or decrease in the number of environmental monitors. Upon written request by the permittee, the Department shall provide the permittee with a written explanation of the basis for any revisions.

e. Prior to making its annual payment, the permittee will receive, and have an opportunity to review and request adjustment to, an annual environmental monitoring work plan that the Department will undertake during the year. The Department will provide a final annual work plan that the Department will undertake during the year.

f. Payments are to be made in advance of the period in which they will be expended and shall be made in full within 30 days of receiving a bill from the Department. The bill from the Department to the permittee will provide information regarding to whom payments should be made payable and the address to which payments should be sent.

g. Failure to make the required payments shall be a violation of this permit. The Department reserves all rights to take appropriate action to enforce the above payment provisions.

h. The environmental monitor shall, when present at any of the permittee's facilities, abide by all of the permittee's health and safety and operational requirements and policies, if such requirements and policies exist and provided they are not inconsistent with Department policies and labor management contracts, and further provided, however, that this shall not be construed as limiting the environmental monitor's powers as otherwise provided for by law and shall not result in the environmental monitor being afforded less protection than otherwise provided to the environmental monitor by State and Federal health and safety requirements.

i. The environmental monitor shall receive from the permittee all general and site-specific safety training which is normally given to new facility/site employees for all areas of the facility or site. This training will be a supplement to the health and safety training that the environmental monitor routinely receives from the Department.

j. The permittee shall immediately furnish to the environmental monitor any facility/site health and safety and operational requirements and policies. Within five (5) days of any revision to the facility/site health and safety and operational requirements and policies, the permittee shall furnish to the environmental monitor the health and safety and operational requirements and policies.

k. The environmental monitor shall be permitted to use environmental monitoring and data collection devices (e.g., photo ionization detectors, cameras, video recording devices, computers, cell phones, etc.) deemed necessary by the Department to evaluate and document observed conditions. The permittee may request the data and images collected from areas where confidentiality is a concern be considered confidential information if appropriate. Copies of the data or images collected from areas where confidentiality has been determined to be a concern shall be provided to the permittee.

l. It will remain the responsibility of the permittee to contact the Spill Hotline or any Division within the Department regarding any required notification of any spill, release, exceedances etc. Notification to the environmental monitor will not be considered sufficient to replace any required notifications.

GENERAL CONDITIONS - Apply to ALL Authorized Permits:

1. **Facility Inspection by The Department** The permitted site or facility, including relevant records, is subject to inspection at reasonable hours and intervals by an authorized representative of the Department of Environmental Conservation (the Department) to determine whether the permittee is complying with this permit and the ECL. Such representative may order the work suspended pursuant to ECL 71- 0301 and SAPA 401(3).

The permittee shall provide a person to accompany the Department's representative during an inspection to the permit area when requested by the Department.

A copy of this permit, including all referenced maps, drawings and special conditions, must be available for inspection by the Department at all times at the project site or facility. Failure to produce a copy of the permit upon request by a Department representative is a violation of this permit.

2. **Relationship of this Permit to Other Department Orders and Determinations** Unless expressly provided for by the Department, issuance of this permit does not modify, supersede or rescind any order or determination previously issued by the Department or any of the terms, conditions or requirements contained in such order or determination.

3. **Applications For Permit Renewals, Modifications or Transfers** The permittee must submit a separate written application to the Department for permit renewal, modification or transfer of this permit. Such application must include any forms or supplemental information the Department requires. Any renewal, modification or transfer granted by the Department must be in writing. Submission of applications for permit renewal, modification or transfer are to be submitted to:

Regional Permit Administrator
NYSDEC Region 1 Headquarters
SUNY @ Stony Brook|50 Circle Rd
Stony Brook, NY11790 -3409

4. **Submission of Renewal Application** The permittee must submit a renewal application at least 180 days before permit expiration for the following permit authorizations: Solid Waste Management.

5. **Permit Modifications, Suspensions and Revocations by the Department** The Department reserves the right to exercise all available authority to modify, suspend or revoke this permit. The grounds for modification, suspension or revocation include:

a. materially false or inaccurate statements in the permit application or supporting papers;

b. failure by the permittee to comply with any terms or conditions of the permit;

c. exceeding the scope of the project as described in the permit application;

d. newly discovered material information or a material change in environmental conditions, relevant technology or applicable law or regulations since the issuance of the existing permit;

e. noncompliance with previously issued permit conditions, orders of the commissioner, any provisions of the Environmental Conservation Law or regulations of the Department related to the permitted activity.

6. **Permit Transfer** Permits are transferrable unless specifically prohibited by statute, regulation or another permit condition. Applications for permit transfer should be submitted prior to actual transfer of ownership.

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

Item A: Permittee Accepts Legal Responsibility and Agrees to Indemnification
The permittee, excepting state or federal agencies, expressly agrees to indemnify and hold harmless the Department of Environmental Conservation of the State of New York, its representatives, employees, and agents ("DEC") for all claims, suits, actions, and damages, to the extent attributable to the permittee's acts or omissions in connection with the permittee's undertaking of activities in connection with, or operation and maintenance of, the facility or facilities authorized by the permit whether in compliance or not in compliance with the terms and conditions of the permit. This indemnification does not extend to any claims, suits, actions, or damages to the extent attributable to DEC's own negligent or intentional acts or omissions, or to any claims, suits, or actions naming the DEC and arising under Article 78 of the New York Civil Practice Laws and Rules or any citizen suit or civil rights provision under federal or state laws.

Item B: Permittee's Contractors to Comply with Permit
The permittee is responsible for informing its independent contractors, employees, agents and assigns of their responsibility to comply with this permit, including all special conditions while acting as the permittee's agent with respect to the permitted activities, and such persons shall be subject to the same sanctions for violations of the Environmental Conservation Law as those prescribed for the permittee.

Item C: Permittee Responsible for Obtaining Other Required Permits
The permittee is responsible for obtaining any other permits, approvals, lands, easements and rights-of-way that may be required to carry out the activities that are authorized by this permit.

Item D: No Right to Trespass or Interfere with Riparian Rights
This permit does not convey to the permittee any right to trespass upon the lands or interfere with the riparian rights of others in order to perform the permitted work nor does it authorize the impairment of any rights, title, or interest in real or personal property held or vested in a person not a party to the permit.

Subject: National Grid Bay Shore OU-4 22 Oak IRM Request to Import Backfill

You don't often get email from espazzarini@geiconsultants.com. Learn why this is important

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good afternoon Matt,

Attached you will find Request to Import forms for the proposed backfill materials for the upcoming IRM at 22 Oak Street. We have submitted two materials for each the granular fill and gravel fill described in the IRMWP, for your

review and approval. We likely will not be importing all four materials and are coordinating with the property owner which materials will meet their requirements for redevelopment.

Please let me know if you have any questions or concerns with these backfill materials.

Thanks,

GEI

Greg, comments received from our Geotech:
No objection to either of the common fill options or the 3/4" gravel specification, looks good to me.

For the 3/8" gravel, I'm assuming this is meant to be in place of the structural fill specification? If so, still no objection. Otherwise, please provide a specification for the structural fill at your earliest convenience.

Subject: RE: [EXTERNAL] Backfill Requirements: 22 Oak St., Bay Shore, NY

Mr. Collins,

GEI has reviewed backfill material submittals for the upcoming soil removal project. The remedial contractor has submitted gradation and compaction test results for two products for both the Common Fill and Gravel Fill materials required for the work, attached. We have assembled the attached table comparing the gradation results of each material to the requirements of our specification and the requirements passed along to us from your structural engineer.

The Pinelawn Common Fill and the Posillico Wash Plant 3/8-inch gravel materials most closely meet both sets of specifications. Can you please forward the attached to your engineering team to confirm that these two materials are suitable for your use?

Thanks,

GEI

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e) and 6NYCRR Part 360.13. Use of this form is not a substitute for reading the applicable regulations and Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Residential Use

Have Ecological Resources been identified? no

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 500-800

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that passes a size 100 sieve? no

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

The 4,000 cubic yards of Common Fill was sampled for characterization at PME, which was comprised of collecting five composite samples and thirteen grab samples. These samples were analyzed for VOCs, SVCOs, pesticides, metals, mercury, chromium hexavalent, chromium trivalent, total cyanides, herbicides, total solids, and PCBs. Additionally four samples were also analyzed for PFAS (EPA 1633 Target List).

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.4(e)5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Based on the analytical results, reported in York Analytical Laboratory Report 24D1678 and 24E0955, all of the soil samples were found to meet Part 375 UU SCOs.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Posillico Materials

Location where fill was obtained:

Farmingdale, NY

Identification of any state or local approvals as a fill source:

NYSDEC Registered 360 Facility, Registration No. 52W41R

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

Submittal 008.2- Posillico Material East - Common Fill Rev. 1

The information provided on this form is accurate and complete.

Attention: Tina Ezratty

Re: PM East Common Fill for National Grid Bay Shore OU-4

Posillico Materials East has generated a 4,000 cubic yard stockpile of Common Fill. The 4,000 cubic yards of Common Fill has been segregated, stockpiled, and properly maintained at Posillico Materials East, in Holtsville, New York (NYSDEC Registered 360 Facility, Registration No. 52W41R, herein referred to as the "PME"). The Common Fill was determined to contain more than 10% fines passing 80 sieve.

The source of the Common Fill is a Long Island Wind Farm Infrastructure project in Holtsville, New York. Based on analytical testing results, soil meeting NYSDEC Part 360.13 Fill Type 2 requirements was approved for both Posillico Materials Wash Plant facility in Farmingdale and Posillico Materials East facility in Holtsville (Posillico Materials Approval No.: 23201G).

The 4,000 cubic yards of Common Fill was re-sampled for characterization at PME, which was comprised of collecting five composite samples and thirteen grab samples. Soil samples were designated as PME-01, PME-02, PME-03, PME-04, PME-05, PME-01-VOC, PME-02-VOC, PME-03-VOC, PME-04-VOC, PME-05-VOC, PME-06-VOC, PME-07-VOC, PME-08-VOC, PME-09-VOC, PME-10-VOC, PME-11-VOC, PME-12-VOC, and PME-13-VOC, and analyzed for New York State Department of Environmental Conservation (NYSDEC) Part 375 Parameters. The samples were sent to York Analytical Laboratories (a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-Cert laboratory).

The results have been compared to NYSDEC Part 375-6.3 Unrestricted Use Soil Cleanup Objectives (UU SCOs). Based on the analytical results, reported in York Analytical Laboratory Report 24D1678, all of the soil samples were found to meet Part 375 UU SCOs. A comparison table is attached below. Per NYSDEC Part 375-6.3, soil tested for Part 375 Parameters that meet UU SCOs, requires no use restrictions on the site.

Should you have any questions, please do not hesitate to contact us.

Sampling/Drawing Plan:

- Stantec – Boring Location Map – Sunrise Wind LLC (05/26/23)

Data and Information Summary:
Haugland Energy Group LLC is proposing to export up to 190,000 tons of soil from various areas between the Holbrook Substation located at Elan Road in Holtsville, and Smith Point Park, located at 1 William Floyd Parkway, Mastic Beach, New York (herein referred to as the "Site") to Posillico Materials NYSDEC 360 Permitted Wash Plant Facility in Farmingdale, Permit No. 1-4720-00695 (herein referred to as the "Wash Plant") and to Posillico Materials East in Holtsville, New York (NYSDEC Registered 360 Facility, Registration No. 52W41R, herein referred to as the "PME"). The Wash Plant can accept soils meeting: NYSDEC Part 360 F2 Requirements, identified as "Clean"; soils failing NYSDEC Part 360 F2 Requirements, identified as "Contaminated"; and Recognizable Uncontaminated Concrete, Asphalt, Rock, Brick and Soil (RUCARBS). PME can also accept soils meeting: NYSDEC Part 360 F2 Requirements, identified as "Clean"; and Recognizable Uncontaminated Concrete, Asphalt, Rock, Brick and Soil (RUCARBS). The soil proposed for the Wash Plant / PME will originate from trenching activities along approximately 18 miles for the installation of electrical transmission cables.

According to the Haugland Energy Group LLC, between January 23rd and April 27th, 2023, three hundred and twenty locations were investigated via test pit excavations within the path of excavation. Test pit locations were identified as AC-1 through AC-38, DC-1 through DC-280, F1000-A, and F1000-B. Test pits were excavated from grade to an approximate maximum depth of 25 ft below grade surface (bgs). Waste characterization soil samples were collected from the three hundred and twenty test pit locations to determine the condition and quality of the underlying strata. Each waste characterization soil sample was comprised of one eight-point composite sample and two discrete grab samples. All three hundred and twenty waste characterization samples were sent to Alpha Analytical Laboratories and analyzed for Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), PCBs, Pesticides, Herbicides, Metals, TCLP Metals, Cyanide, Hexavalent and Trivalent Chromium.

Analytical Results:
According to the analytical results reported in the Alpha Analytical Laboratories analytical reports L2303824, L2304096, L2304335, L2304539, L2304809, L2305074, L2305075, L2305280, L2305574, L2305575, L2305851, L2305852, L2306175, L2306178, L2306871, L2307138, L2307477, L2307685, L2307918, L2308183, L2308199, L2308419, L2309514, L2309927, L2310075, L2310250, L2310730, L2311108, L2311344, L2311606, L2311823, L2312150, L2312513, L2312874, L2313044, L2313226, L2313496, L2313773, L2314049, L2314394, L2314717, L2314990, L2319767, L2320119, L2320358, L2320626, L2320884, L2321326, L2321660, L2321973, L2322605, L2322928, not all of the waste characterization sample were found to meet NYSDEC Part 360.13(f) F2 requirements. Waste Characterization samples DC-179 (1-2), DC-180 (2-3), DC-181 (4-5), DC-182 (5-6), DC-156 (2-3), DC-139 (2-3), DC-135 (1-2), DC-91 (2-3), DC-79 (1-2), and DC-102 (6-6.5) were detected with exceedances for Acetone above NYSDEC Part 360.13(f) F2 Requirements and New Jersey Extractable Petroleum Hydrocarbons (NJ EPH) above NJDEP Protocol for Addressing Jersey Extractable Petroleum Hydrocarbons. As for the remaining samples, they were found to meet NYSDEC Part 360.13(f) F2 Requirements.

Clean Soil Bin:
Based on the above referenced data, up to **118,847 cubic yards or 178,270 tons** of the proposed soil is approved for the Clean Soil Bin at Posillico Materials Wash Plant in Farmingdale and Posillico Materials East in Holtsville. Soils that commensurate with Composite and Grab samples represented by waste characterization samples DC-179 (1-2), DC-180 (2-3), COMP-90, DC-181 (4-5), DC-182 (5-6), COMP-91, DC-155 (2-3), DC-156 (2-3), COMP-78, DC-139 (2-3), DC-140 (2-3), COMP-70, DC-135 (1-2), DC-136 (1-2), COMP-68, DC-91 (2-3), DC-92 (4-5), COMP-46, DC-79 (1-2), DC-80 (1-2), COMP-40, DC-101 (2-3) DC-102 (6-6.5), and COMP-51 are denied for the Clean Soil Bin at the Wash Plant and PME. All other soils that correspond with the remaining waste characterization samples are approved for the Clean Soil Bin at the Posillico Materials Wash Plant Facility in Farmingdale and Posillico Materials East in Holtsville. The material is approved only for the areas and depths listed above. No other material is to come to the Wash Plant.

Additional Requirements:

- Posillico Materials reserves the right to perform QA/QC sampling during the import of this material.
- All Contaminated soil and General Fill from New York City must use the NYSDEC Part 360 tracking form.
- Contaminated Soil must also be shipped in a truck with a valid Part 364 Permit registered with the NYSDEC.
- If any deleterious material (asbestos, wood, plastic, organics and general garbage) is encountered or identified, the load will be rejected at the gate or a surcharge will be applied.
- If standing liquid is encountered or identified in the truck, the load will be rejected at the gate or a surcharge will be applied.
- If the material is from a USEPA and/or NYSDEC Regulated Program Site, as per Part 361-5.4 (d), an approval letter must be included with the application indicating the material is acceptable for the facility.

The applicant warrants that the material proposed for shipment is in fact, the same material which was tested and is represented by the sample results provided with this application. All deliveries **must** be scheduled in advance all material will be weighed on scales.

Please contact me if you have any questions.

NOTES:
Any Regulatory Exceedences are color coded by Regulatior

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilutior
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimate
U=analyte not detected at or above the level indicate
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interference
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analy
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

DISCLAIMER:

York Analytical Laboratories, Inc. is providing this information as a convenience to you. York makes no representations or warranties that these data are accurate, complete or represent the latest regulatory authority limits or analytes. York is not responsible for any errors or omissions in these specific regulations. Your use of these data constitute your understanding of these limitations and you agree to hold York harmless from any and all action that may arise from use of said information. As regulations change often, we encourage the user to review the regulatory limits and lists of interest to confirm these data.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 25, 2024 and listed below. The project was identified as your project: **PME Select Fill Stockpile**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24D1678

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE20	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 20% of expected value).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 14, 2024 and listed below. The project was identified as your project: **23201G-EC**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24E0955

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

YORK

Sample and Data Qualifiers Relating to This Work Order

PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
PF-LCS-H	The LCS recovery for this PFAS compound was above control limits.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

NOTES:
Any Regulatory Exceedences are color coded by Regulation

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

Mr. Michael J. Posillico
Posillico Materials East, LLC.
1750 New Highway,
Farmingdale, NY 11742

Re: Posillico Materials East, LLC - Registration No.- 52W41R
615 Furrows Road, Holtsville, NY 11779

Dear Mr. Posillico:

Enclosed is a validated copy of your registration form submitted to the New York State Department of Environmental Conservation pursuant to 6 NYCRR Part 360.

This letter only acknowledges receipt of your registration form and does not, in any way, verify that the information which you provided on the form is true or correct. Also, please be advised that the validation of this registration is contingent upon you being the owner or having legal authority to use the described site. In addition, you are responsible for obtaining any other permits and approvals that may be required; and for complying with all other applicable State and Federal laws, rules, regulations and all other applicable local ordinances including, but not limited to, zoning ordinances, building codes, Fire codes, etc.

Furthermore, any existing stockpile of material that encroaches on to the adjacent parcel (Fehr Property), must be managed in accordance with the Department approved agreement between you and the previous facility owner, Pure Recycling Products, Inc. This agreement has been memorialized in a letter dated October 19, 2017 signed by you and the PM East (also attached).

This registered activity shall in no way conflict with any mined land reclamation permit and approved reclamation plan.

You are reminded that 6 NYCRR Part 360 contains various requirements that must be followed to warrant your facility's continued status as a registered facility. This information was provided in the registration package

If you have any questions regarding this matter or need an additional copy of the registration requirements, please contact Pappachan Daniel, P.E., of my staff at the above telephone number.

Sincerely,

Syed H. Rahman, P.E.
Regional Materials Management Engineer

DEC REGISTRATION # 52W41R
DEC ADMINISTRATION #
DATE RECEIVED 11 / 02 / 2017

REGISTRATION FORM FOR A SOLID WASTE MANAGEMENT FACILITY

Please read and follow all instructions before completing this registration form

PLEASE TYPE OR PRINT CLEARLY

THIS IS NOT A UPA PERMIT

1. FACILITY NAME AND LOCATION: Posillico Materials East LLC	2. FACILITY OWNER'S NAME: Posillico Materials East LLC
Street: 615 Furrows Road	Mailing Address: 1750 New Highway
City/Village: Holtsville, New York	City/Town/Village: Farmingdale
Town: Town of Islip County: Suffolk	State/Zip Code: New York, 11735
Telephone Number: (631) 249-1872	Telephone Number: (631) 249-1872
3. FACILITY OPERATOR'S NAME (if different): See attached page	4. SITE OWNER'S NAME (if different): Posillico Realty Partners East LLC
Mailing Address:	Mailing Address: 1750 New Highway
City/Town/Village:	City/Town/Village: Farmingdale
State/Zip Code:	State/Zip Code: New York, 11735
Telephone Number:	Telephone Number: (631) 249-1872

5. TYPE OF FACILITY REGISTRATION (check all applicable)

- ☐ Energy Recovery Incinerators or Pyrolysis Units [360-3.1(c)]
- ☐ Land Clearing Debris Landfills three acres or less [360-7.2(a)]
- ☐ Transfer Stations (municipally owned/operated/contracted) receiving less than 50,000 cubic yards or 12,500 tons of household solid waste annually [360-11.1(b)(1)]
- ☐ Transfer Stations (municipally owned/operated/contracted) receiving less than 50,000 cubic yards or 12,500 tons of containerized solid waste annually [360-11.1(b)(2)]
- ☐ Source Separated, Nonputrescible Solid Waste Recyclables Handling and Recovery Facilities [360-12.1(d)]
- ☐ Waste Tire Retreaders [360-13.1(d)(1)(i)]
- ☐ Waste Tire Stored for On-site Energy Recovery [360-13.1(d)(1)(ii)]
- ☐ Tire Dealers Selling Waste Tires [360-13.1(d)(1)(iii)]
- ☐ Tire Manufacturing Facilities [360-13.1(d)(1)(iv)]
- ☑ Processing Facilities Receiving Only Recognizable Uncontaminated Concrete, Asphalt Pavement, Brick, Soil or Rock [360-16.1(d)(1)(i)]
- ☐ Uncontaminated Unadulterated Wood Processing Facilities [360-16.1(d)(1)(ii)]
- ☐ Other Facilities not specifically described above, specify type

6. SOLID WASTE HANDLED

a. List wastes and/or materials to be accepted: Uncontaminated concrete, asphalt, brick, soil, and rock (Uncontaminated RUCARRS)

b. Quantity (specify Units - see instructions)
design capacity: Asphalt - 1,000 CY; Concrete - 1,000 CY per day
storage on site: 75,000 CY (see attached figure for staging/location)

7. OPERATIONS SCHEDULE - Normal schedule of operation: Monday - Saturday, 7:00 am - 5:00 pm; night deliveries to be coordinated with Town

8. NAME(S) OF ALL MUNICIPALITIES SERVED: Suffolk and Nassau counties

9. CERTIFICATION: I hereby affirm under penalty of perjury that information provided on this form and attached statements and exhibits was prepared by me or under my supervision and direction and is true to the best of my knowledge and belief, and that I have the authority as Member (title) of Posillico Materials East LLC (Entity) to sign this registration form pursuant to 6 NYCRR Part 360. By signing this registration form, I affirm that I have read the applicable regulations and will abide by all conditions of the registration requirements. I am aware that any false statement made herein is punishable as a Class A misdemeanor pursuant to Section 210.45 of the Penal Law.

In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods

Test #	Specific Location	Elevation	Moisture (%)	Wet Density (lbm/ft^3)	Dry Density (lbm/ft^3)	Max Dry Density (lbm/ft^3)	% Compaction	Complies
1	National Grid Bay Shore OU-4 IRM	-2.0' SG	5.5%	126.8	120.3	126.5	95.1%	Yes
2	National Grid Bay Shore OU-4 IRM	-2.0' SG	5.7%	129.0	122.0	126.5	96.5%	Yes
3	National Grid Bay Shore OU-4 IRM	-1.0' SG	5.1%	129.0	122.7	126.5	97.0%	Yes
4	National Grid Bay Shore OU-4 IRM	-1.0' SG	5.8%	127.5	120.5	126.5	95.3%	Yes

Gauge Information		
Make	HUMB	
Model	EZ2	
Serial #	10584	
Daily Standard Count	**MS**	**DS**
	3286	335

Test Information	
Soil Type	Common fill
Method	Direct transmission
Depth of Pin	12"
Correction	None
Reason	None

Minimum % Compaction	95%
