Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
September 16, 2024 through September 20, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no instances of fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] exceeding the applicable Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Mobilization of equipment
- Began demolitions of concrete slab

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
September 22, 2024 through September 28, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was installed on September 23,2024 between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 1.27 m/s. The average wind direction during the week was from the East.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. On September 24, 2024 at 8:15am, during the time the air monitoring equipment start up, AMS-104P exceeded the applicable Action Limit during this reporting period for Particulate Matter (PM-10) [dust]. There was no site activity occurring at the time of this exceedance, suggesting it may not be an accurate reflection of site conditions. AMS-104P was located upwind during the time of the alert, therefore the increase in concentrations of dust is unlikely to have originated from site activities. Following the noted exceedance, PM-10 concentrations remained below all alert and action

limits for the remainder of the day.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Demolition of concrete slab and footings
- Loaded concrete off site

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
September 29, 2024 through October 4, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 0.93 m/s. The average wind direction during the week was from the East.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] that exceeded the Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cells 1-4
- Stockpiled and dewatered saturated soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
October 7, 2024 through October 12, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 0.77 m/s. The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] that exceeded the Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cells 5-10
- Stockpiled soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil
- On Saturday (10/12/24) drilled geoprobe borings for supplemental PDI data

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
October 14, 2024 through October 18, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 1.92 mph (0.86 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] that exceeded the Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cells 10-14
- Stockpiled soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
October 21, 2024 through October 25, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 1.94 mph (0.87 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] that exceeded the Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cell 15 and Cells 17-20.
- Stockpiled soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil
- On Monday (10/21/24) drilled geoprobe borings for supplemental PDI data

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
October 27, 2024 through November 2, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 2.26 mph (1.01 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. On October 31, 2024, station AMS104-P (266.00 ug/m^3) exceeded the Action Limit for the fifteen-minute average concentrations of Particulate Matter (PM-10) [dust]. During the time of this exceedance, Posillico was using the loader to manage the imported stone stockpile. Posillico had recently relocated the imported stone stockpile to within the limits of the completed excavation cells in the immediate vicinity of the portable air monitoring station. GEI instructed Posillico to spray water on the stockpile before further movement to reduce particulates. After this adjustment the

dust concentrations returned and remained below Action Limits for the remainder of the reporting period.

Additionally, on Saturday, November 2, 2024, stations AMS-2753 (200.38 ug/m^3) and AMS-2755 (203.67 ug/m^3) exceeded the Action Limit for the fifteen-minute average concentrations of Particulate Matter (PM-10) [dust]. Both air monitoring stations are located along Oak Street. During the time of the exceedance, there were no site activities being performed. Based on the wind direction at the time of the exceedance (from the Northwest) it appears that the dust may have originated off Site. Air monitoring station AMS-2754, located downwind at the time of the exceedance, recorded higher concentrations of PM-10 than normal, but beneath the Action Limit. It is important to also note that the impacted material stockpile was covered at the end of the workday on Friday and is located to the south of stations AMS-2753 and 2755. Following the single fifteen-minute average exceedance dust concentrations returned and remained below Action Limits for the remainder of the reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cell 16 and Cells 21-24.
- Stockpiled soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
November 4, 2024 through November 8, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 2.21 mph (0.99 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. On November 5, 2024, station AMS104-P (130.90 ug/m^3) exceeded the Response Limit for the fifteen-minute average concentrations of Particulate Matter (PM-10) [dust]. During the time of this exceedance, Posillico was using the loader to manage the imported stone stockpile. Posillico had recently relocated the imported stone stockpile to within the limits of the completed excavation cells in the immediate vicinity of the portable air monitoring station. GEI instructed Posillico to spray water on the stockpile before further movement to reduce particulates. After this adjustment the

dust concentrations returned and remained below Response Limits for the remainder of the reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cell 25 and Cells 28-30
- Stockpiled soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil
- Built stockpile adjacent to Cells 36-38

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Date: November 19, 2024

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
November 11, 2024 through November 15, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 2.33 mph (1.04 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] that exceeded the Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cells 26, 31, 32, and 38
- Stockpiled soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil
- Built stockpile adjacent to Cells 36-38

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
November 18, 2024 through November 22, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 2.35 mph (1.05 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] that exceeded the Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cells 33-38
- Stockpiled soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
November 25, 2024 through November 29, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 2.26 mph (1.01 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] that exceeded the Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Installed slide rail system for excavations
- Completed excavation and ¾ inch stone backfill of Cells 39-41
- Stockpiled soils within the excavation footprint
- Imported ¾ inch stone for backfill
- Imported granular backfill
- Exported non-hazardous soil

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
December 2, 2024 through December 6, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 2.75 mph (1.23 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. There were no fifteen-minute average concentrations of Particulate Matter (PM-10) [dust] that exceeded the Action Limit during this reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Imported granular backfill
- Exported non-hazardous soil
- Fine graded ¾ stone
- Installed non-woven geo-textile fabric
- Removed, decontaminated, and demobilized all slide rail components
- Placed clean backfill material
- Compacted clean backfill material

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

Regarding: Weekly Community Air Monitoring Summary
Bayshore/Brightwaters Former MGP Site
Bayshore, New York
December 9, 2024 through December 13, 2024

Dear Mr. Quinlan:

This report includes a summary of data collected during implementation of the Community Air Monitoring Plan (CAMP) at the Bayshore/Brightwaters Former MGP Site in Bayshore, New York. Throughout the week, three fixed air monitoring stations (AMS-2753, AMS-2754, and AMS-2755) were located along the site perimeter. Additionally, one mobile air monitoring station (AMS-104P) was located between the excavation and LIRR parking lot. The locations of the air monitoring stations during the week along with the typical wind direction are marked on the attached drawing. The average windspeed during the week was 3.47 mph (1.55 m/s). The average wind direction during the week was from the Southwest.

Exceedances

There were no fifteen-minute average concentrations of Total Volatile Organic Compounds (TVOC) that exceeded the Action Limit during this reporting period. On Tuesday, December 10, 2024, at 7:45am, station AMS104-P (109.70 ug/m^3) exceeded the Response Limit for the fifteen-minute average concentrations of Particulate Matter (PM-10) [dust]. The exceedance occurred at the startup of the station prior to commencement of site activities. No immediate actions were taken by Posillico and GEI continued to monitor the dust concentrations. Dust concentrations returned and remained below Response Limits for the remainder of the reporting period.

Monitored Site Construction Activities

During this reporting period, monitoring was performed for all on-site construction activities, which included:

- Imported granular backfill
- Exported material from decontamination pad
- Fine graded ¾ stone
- Installed non-woven geo-textile fabric
- Placed clean backfill material
- Compacted clean backfill material

CAMP Monitoring

Real-time monitoring for TVOC and PM-10 was performed on the site perimeter at the fixed stations and one mobile station collectively employing a GEI perimeter air monitoring system. Each station included a with photoionization detector (PID) to detect TVOCs and an optical sensing aerosol meter [dust monitor] to measure PM-10.

Table 1 provides a daily summary of maximum fifteen-minute average ambient air concentrations. The Alert Limits, Response Limits, and Action Limits shown on the table are specified in the site Community Air Monitoring Plan prepared by the project engineer, GEI, and dated April 2020.

If you have any questions regarding the information in this report, please contact me.

RE: K – Bayshore MGP Site, Islip, Suffolk Co.
Site 152172
OU4 22 Oak St. Excavation, IRM Work Plan

Dear Mr. Quinlan:

Thank you and Matthew O'Neil for GEI Consultants' August 25, 2023, "Operable Unit No. 4 – 22 Oak Street Excavation Interim Remedial Measure Work Plan, Bay Shore/Brightwaters Former MGP Site" (Work Plan). The Work Plan is approved.

The Department of Environmental Conservation understands demolition of the existing building is planned prior to the start of the interim remedial measure. Please inform the Department of the demolition schedule and subsequent 22 Oak Street remedial activity. I can be contacted at (518) 402-9686 or john.spellman@dec.ny.gov

Sincerely,

John Spellman, P.E.
Project Manager
Division of Environmental Remediation

II. SUBMITTAL INSTRUCTIONS / REQUIREMENTS

Documents referenced herein can be found on our webpage at https://islipny.gov/departments/planning-and-development/building-division-permits-section/permit-applications-and-requirements. Links to many of the documents referenced are provided throughout this application.

Application processing begins when all required documents are deemed acceptable for intake and the permit fee is paid. Please refer to our website for the Commercial and Residential fee schedules in effect at the time of application.

Applications must be filed electronically. Please refer to the Building Permit – Application Submittal Process flyer on our website. Unless stated otherwise, hard copies are not required with the initial electronic submission but may be required prior to permit issuance. The following items are required for permit intake:

1. Survey – An accurate survey less than two (2) years old is required. The survey must show all existing improvements, be scalable and prepared by a licensed surveyor.
2. Plan – The following must be shown on a site plan, plot plan or copy of the survey:
   - All structures or improvements to be removed must be labeled for removal
   - All structures to remain must be labeled to remain
   - If the main structure is to be demolished, all accessory structures must also be demolished unless there is an issued permit for a new main structure.
3. Erosion Control Plan – Required if the work will result in ground disturbing activity.
4. Work Permits – Any work on Town, County or State property will require the appropriate Right of Way work permit. This may involve the removal of an apron, sidewalk or any work in the roadway or property extending 8-10 ft typically behind the curb to the applicant's property line.
5. Federal Aviation Administration approval – Due to the proximity of Long Island MacArthur Airport, applications may be subject to the Code of Federal Regulations Part 77.
6. Disconnect Letters – Required from the following agencies:
   - PSEGLI
   - Suffolk County Water Authority
   - National Grid (or a letter from National Grid stating there is no gas on the subject property)
   - Sewer District (or a letter from SCDPW Sewer District if the property falls outside of their boundaries)
7. Asbestos Certification:
   - Copy of asbestos certificate (front and back)
   - Copy of asbestos handling license (if asbestos is present)
   - Remediation report and lab results if asbestos was present, or Certification that there is no asbestos present
8. Refrigerant Evacuation and Capture Certification – If an air conditioning system is part of the demolition, a Town of Islip licensed HVAC contractor is required to perform and show proof of the refrigerant evacuation and capture.
9. Other – Additional requirements may be required by the Engineering Division, including a Storm Water Pollution Prevention Plan (SWPPP) if the area of disturbance is one acre or more and drains to a NYS Waterway.
10. Contractors Insurance Requirements – *ACORD Forms are not acceptable proof of NYS Worker's Compensation or Disability benefits insurance coverage.*
    - NYS Workers Compensation Insurance – Town of Islip must be listed as Certificate Holder. Acceptable forms include NYS Form C-105.2, NYS GSI-105.2 (2/02), NYS Form U-26.3, or if exempt, signed & dated NYS Form CE-200.
    - NYS Disability Insurance – The Town of Islip must be listed as the Entity Requesting Proof of Coverage. Acceptable forms include NYS Form DB-120.1, NYS Form DB-155, or if exempt, signed & dated NYS Form CE-200.

Exception: If demolition work is to be done by the Property Owner, an original signed BP-1 Insurance Waiver is required; not applicable for demolition of an owner-occupied dwelling.

PLACE STICKER HERE

III. APPLICATION REVIEW / REQUIREMENTS PRIOR TO PERMIT ISSUANCE

Once the application is deemed filed, it will be circulated to various departments and outside agencies for review to ensure your plans comply with Islip Town Code, the NYS Uniform Code and all applicable regulations. If the removal involves underground structures, Engineering review will be required.

IV. REQUIREMENTS PRIOR TO ISSUANCE OF A CERTIFICATE OF COMPLIANCE (CC)

A list of requirements due prior to CC will be provided to you upon permit issuance. All documentation shall be uploaded to the permit record. If original signed/sealed documents are required, they must be brought to the Building Division-Records Section. This documentation will be evaluated by the respective department(s) before being accepted as complete. Requirements include, but are not limited to the following:

1. New York 811 – You must notify New York 811 prior to the start of any digging/excavating activities; for notification procedures, visit https://newyork-811.com/; failure to do so may result in penalties and fines.
2. Inspections – Applicant is responsible for ensuring that their contractors schedule the required inspections.
3. Documentation – Upload all documentation as required by the inspectors.

By signing this permit application, I expressly authorize the Building Division to conduct any inspections of the premises that the Building Division deems necessary to properly administer the building permit. I understand that the Town is relying on the information provided herein, and any inaccuracy may cause delay or additional fees. Further, I understand that if during the review process or inspections, it is determined that additional structures/alterations exist without the benefit of a building permit or certificate, the review process will be delayed and that additional permits and certificates will be required by the Building Division. By submitting this application, I acknowledge and agree that a modification or addition may be made to the Certificate of Occupancy/Compliance. No further notice of any resultant modification or addition shall be required.

PROPERTY OWNER SIGNATURE AND AUTHORIZATION

Property owner must sign below and have signature notarized

I declare under penalty of perjury that: I am the property owner for the above subject property, I personally completed or reviewed the above information contained on this application and certify its accuracy, and this application is a true and complete statement of all existing and proposed work on the subject property. I acknowledge that it is my responsibility as the property owner to ensure the accuracy of any and all information provided to the Town, whether the information is provided by myself or any of the third parties (Tenant, Contractor, Design Professional, Expeditor) listed above, if any, throughout the permit and certificate process and that the Town is relying on the information and representations contained therein.

I acknowledge that the Town may also provide information to these authorized third parties throughout the permit and certificate process and that I must notify the Town ***in writing*** if any third-party authorization is subsequently revoked. I acknowledge that false statements are punishable as a class "A" misdemeanor pursuant to Section 210.45 of the Penal Law of the State of New York.

Service To:
22 OAK ST
BAY SHORE, NY 11706

Customer Project#: 900000196373

Dear G C ENVIRONMENTAL INC:

This is to advise you that the PSEG-LI electric facilities at the above referenced location have been disconnected and removed off the building structure that is located on the property.

Please note that there may still be PSEG LI facilities located within the property boundaries and that NYS law (NYCRR Part 753) requires all contractors to call for a utility locate (NY 811) prior to performing any ground excavation or regrade activity. The call to the 811 Call Center must be done at least 2 business days prior to the start of the work and confirmation of utility marks having been identified must be received from all the facility owners prior to any site work.

You must also contact National Grid at 631-348-6150 to procure a letter of demolition associated with natural gas service, whether or not your home or business uses natural gas.

If you have any questions regarding the above, please contact Building & Renovation Services at 1-844-341-6378 or via email at BRSLI@PSEG.com.

Very truly yours,

Katherine Gianelli

RE: 22 Oak Street, Bay Shore

Dear Mr. Collins,

On April 30, 2024, our representative confirmed that the water services were physically disconnected at the above referenced location.

Please advise your contractor that care should be taken not to damage the curb box, as the cost of any repairs would be billed to the premise and no service initiated until the balance is paid.

Sincerely

Ann Bailey

National Grid WO # T102610768 - 22 OAK ST, BAY SHORE

To Whom It May Concern:

This letter is to advise you that the natural gas service line to the above location was physically disconnected on May 14, 2024.

Please advise your contractor that care should be taken not to damage or remove the existing gas valve curb box. This curb box will be used in the future by National Grid to reconnect the gas service line to this property.

By Law, excavators and contractors working in New York City and Nassau and Suffolk Counties must contact New York 811 at least 2 full business days, not including the day of contact, prior to digging by calling 811 or by using the website https://newyork-811.com/.

This confirmation letter of a gas cut-off service line to the subject property does not relieve the excavator of contacting NY 811.

If you have any further questions, kindly contact me at 833-359-0645.

Respectfully,

Christina M. Bonelli

1.0 Introduction

At the request of GC Environmental Inc, CNS Environmental ("CNS") conducted a Pre-demolition Asbestos Survey ("Survey") at 22 Oak Street in Bay Shore, New York referred to hereafter as the "Subject Site". See Figure I: Site Location Map.

The purpose of the survey was to identify potential asbestos-containing materials ("ACM") that will be impacted during the planned razing to grade of the Subject Site.

2.0 Sampling Methods and Materials

The United States Environmental Protection Agency (EPA) started to impose bans on asbestos products from 1973 to 1978. The first ban of asbestos was in 1973 for the use of asbestos in spray-on fireproofing and thermal insulations. In 1979 the EPA announced its intention to issue a rule that bans all uses of asbestos. In 1989, the EPA instituted a "phase-down" ban of all asbestos containing materials (ACMs), which banned the importing and use of asbestos materials into the United States; however, allowed contractors to utilize any asbestos materials in stock without ordering or acquiring any new materials. After a 5th Circuit Court ruling in 1991, the ban now states that ACMs can be used in materials that were in existence prior to the 1989 ban, as long as they are in a non-friable form.

On October 31, 2014, the additional/revised New York State Environmental Laboratory Approval Program (ELAP) analytical method 198.8 was introduced and must be utilized on all spray-on fireproofing samples found to contain Vermiculite in any quantity via PLM (ELAP method 198.1) and less than 1.0% Chrysotile asbestos; to definitively ascertain with statistical confidence of the analytical result for Chrysotile and Amphibole asbestos in the spray-on fireproofing material tested. All other friable/non-friable building materials that are found to contain greater than 10% Vermiculite require additional analysis to determine the presence/absence of asbestos.

The entire targeted space was visually inspected for the presence of suspect building materials that may be impacted by the proposed project. Photographs were collected, a site sketch was generated or ascertained, and inaccessible areas were so noted. Samples of suspect materials were collected in accordance with the following established asbestos guidelines and regulations:

1. United States Environmental Protection Agency's "Guide for Controlling Asbestos Materials in Buildings" (Purple Book 560/6-85-024, June 1985) and
2. United States Environmental Protection Agency's Asbestos in Buildings "Simplified Sampling Scheme for Surfacing Materials" (Pink Book 1985 560/5-85-030A).
3. New York State Department of Labor Industrial Code Rule 56; Subpart 56-5: Phase IA: Asbestos Survey Planning and Design.

CNS's bulk sample labelling system is composed with a (i) location followed with (ii) a numeric value then followed (iii) by a letter (ie: "6FL-01A" or "U16-01A"). The floor or unit number represents where the survey was conducted, the numeric value represents the homogenous material/area, and the letter value represents the sample number. A detailed description of the sampling methodology employed is as follows:

1. For each area, suspect materials were noted, along with their description and quantity. Carpets were lifted to inspect for mastic or underlying floor tiles. Inspections were made above ceiling tiles in key areas to check for thermal insulations, waterproofing and/or fireproofing.

2. The suspect materials found in each room or area were then grouped by homogeneous materials. They were deemed homogeneous if color, date of application, location and texture were deemed to be identical.
3. The number of samples collected from each homogeneous area is based on the type of material and size of the sampled area. At least three bulk samples are collected from each homogeneous surfacing material, or thermal system insulation. The number of samples of non-friable miscellaneous materials is left up to the discretion of the inspector, as outlined in AHERA (40 CFR Part 763, Subpart E).

3.0 Asbestos Survey

The survey was conducted on Thursday March 14th and Tuesday April 23rd of 2024 by Mr. Shawn McAleese (NYS Certificate # 23-6UHUQ-SHAB) of CNS. Suspect materials are listed in Table 1, along with quantity of ACMs and analytical results. Areas that were not accessible during the survey are so noted. See Appendix A: Sketch of Survey Area.

3.1 Bulk Sample Analytical Results

The collected bulk samples were submitted to Metro Analytical Laboratories. (ELAP # 12003 and NVLAP #500081-0-0) located at 255 West 36 Street in New York, New York under chain of custody. See Appendix C: Laboratory Analytical Report with Chain of Custody.

Samples were analyzed via Phase Light Microscopy ("PLM") by Method 40 CFR 763, Subpart F, Appendix A and EPA Method 600/M-4-82-020. Since PLM analysis of non-friable organically bound ("NOB") materials is not consistently reliable for a negative determination of the presence of asbestos, *all NOB* samples that were negative under PLM analysis are then subjected to Transmission Electron Microscopy ("TEM") via EPA Method 600 /R-93/116. In addition, as per a NYSDOH memorandum and guidance letter dated June 22, 2012, all suspect building materials found to contain 10% or greater Vermiculite must be deemed as an asbestos containing material. NYS ELAP Method 198.8 was utilized to quantify and identify Vermiculite in bulk samples as recommend by ELAP, where applicable.

Table 1 –Analytical Results Summary Table

Material	Location	Estimated Quantity (SF)	No. of Samples/ Asbestos Content (%) Chrysotile	Condition of ACM
2' x 2' Ceiling Tiles	1st and 2nd Floor Office Areas	**	2 / ND	**
Wallboard		**	2 / ND	**

Built-up Tar Roofing – L2			**2 / 2.5%**	**Good**
Suspect Materials that could not be sampled or not sampled and are considered PACM:				
N/A				
Materials that are considered non-suspect; therefore, not sampled:				
Fiberglass Insulations	Ducts, Pipes and Fittings	--	NS	--
Ceramic Floor Tiles	Throughout the office area.	--	NS	--
Carpeting with yellow adhesive	Throughout the office area.	--	NS	--
These Areas Were Inaccessible at the Time of the Survey, or Unable to be Sampled:				
N/A				
Prior Survey Reports Analytical Results:				
N/A				

Notes:

Materials highlighted in bold RED are identified as asbestos-containing (ACM)

Materials in bold are considered asbestos-containing (ACM) by cross-contamination with another ACM material

Condition of ACM:
Good=Non-friable and/or friable material with no damage or potential for damage;
Fair= Any ACM exhibiting damage or the potential of being damaged;
Poor=Any ACM that is damaged.

N/A = Not applicable
ND = Not detected, therefore not ACM.
NS = Not sampled, these materials are considered not suspect therefore not ACM.
TR = Trace - Although asbestos fibers were identified, content is below the USEPA 1% criteria, therefore is not ACM
PACM = Presumed Asbestos Containing Material; must be treated as asbestos containing until sampling is completed.

4.0 Site Description

The Subject Site is a split-level commercial office building approximately 3,700 square feet in size, occupied by a single tenant and comprised of a warehouse and office areas.

Interior partitions consisted of non-asbestos gypsum wallboard partitions with non-asbestos joint compound applied at the seams. The ceilings were acoustical with non-asbestos 2'x2' ceiling tiles concealing the structural non-suspect wood or concrete decking.

The flooring consisted of carpet bound to the non-suspect concrete with a non-suspect yellow glue, bare concrete, non-suspect wood flooring or non-suspect ceramic floor tiles adhered with non-asbestos thinset mortar and sealed with non-asbestos grout. The façade consisted of cinderblock or brick bound with non-suspect mortars. Windows and doors were sealed with non-suspect silicone, rubber glazing and rubber expansion joints.

The second-floor gabled roof consisted of non-asbestos roof shingles atop a non-asbestos felt fastened to the wood substrate with non-asbestos tar. The first-floor roof is comprised of (i) non-asbestos asphalt sheet sealed with non-asbestos seam caulk (top layer-L1), atop; (ii) an asbestos containing built-up membrane (bottom layer-L2), atop the concrete structural deck. It needs to be noted, that the non-asbestos top layer asphalt sheeting and caulk needs to be treated as an ACM because it is comingled with the ACM bottom layer.

See Appendix A: Site Sketch of Surveyed Area(s) and Appendix B: Site Photographs.

5.0 Conclusions / Recommendations

As indicated in Table 1, the first-floor roof has been identified as an ACM, therefore, CNS recommends the following:

1. The identified asbestos-containing materials are to be impacted therefore, a NYSDOL-licensed asbestos removal contractor with NYSDOL certified personnel shall remove the identified asbestos containing materials.

2. The asbestos removal project would be considered a large project and is required to be filed with the NYSDOL and the United States Environmental Protection Agency (USEPA) requiring a fourteen-day waiting period.

3. The asbestos abatement shall be completed following NYSDOL ICR-56 Special Project Section 56-11.6 outlining procedures for exterior roof removal.

4. All generated waste shall be disposed as Asbestos Containing Waste and all appropriate manifests shall be provided by the contractor at the end of the project.

5. Asbestos abatement project oversight and air monitoring is required during all asbestos abatement activities.

6.0 Signatures of Environmental Professionals

This Pre-Demolition Asbestos Survey was conducted in accordance with the scope described herein. CNS Environmental assumes no responsibility for exclusions or deletions from this report.

7.0 Project Limitations

This report is written for the use of GC Environmental Inc and its partners. No other party shall have any right to rely on this report or any service provided by CNS Environmental without prior written consent by GC Environmental Inc and CNS Environmental.

This asbestos survey was performed in accordance with professional standards and regulations applicable to the industry today. The results of this survey and the contents of this report are subject to revision based on future events and/or investigations. CNS Environmental assumes no responsibility for the property owner's actions related to the following:

- Violation of any federal, state or local statute or ordinance relating to identification or disposal of a hazardous substance or its constituents;
- Undertaking of, or arrangement for the handling, removal, treatment, storage, transportation, or disposal of hazardous substances or constituents found or identified, and;
- Changed conditions or hazardous substances or constituents introduced at the properties by Client or third persons to this contract during or after the completion of services provided by this report.

Therefore, the findings, conclusions and recommendations presented herein are based solely on the aforementioned scope of work and information gathering. Incomplete or outstanding information identified throughout this report is considered a limitation to the asbestos survey, including inaccessible areas, enclosed building envelopes and analytical results generated by third-party laboratories.

All findings, conclusions and recommendations stated in this report are based upon facts, circumstances and industry-accepted procedures for such services, as they existed at the time of inspection(s) and when this report was prepared. All findings, conclusions and recommendations stated in this report are based on the data and information provided and observations and conditions that existed on the date and time the work was performed. Responses or regulatory changes from local, state, or federal agencies or other out-sourced or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions or circumstances to the report. A change in fact, circumstance, regulation or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions and recommendations expressed in this report and is considered a limitation.

Report Notes

General Notes and Disclaimers

- The samples analyzed in this report were not collected by this laboratory - they were received from the client, or an agent of the client, in good condition, unless otherwise noted.
- All results are calculated based on client-provided samples and / or measurements and fall within the acceptable Quality Control limits, unless otherwise noted.
- The report shall not be reproduced, except in full, without the written approval of the laboratory.
- This report relates only to the samples tested. It may not be used by the client to claim project endorsement by NVLAP, NYS ELAP, or any other government agency.
- All samples will be properly disposed of after 60 days.
- Quality Control data (including 95% confidence limits, laboratory / analysis accuracy and precision) is available upon request.

Notes Regarding Asbestos Testing

- Air Sample Analysis by Phase Contrast Microscopy (PCM) adheres to Method NIOSH-7400. Results < 7 fibers / mm^2 are statistically insignificant.
- Percentages are calculated using the EPA equivalent Stratified Point-Count Method.
- Bulk Sample Analysis by Polarized Light Microscopy (PLM) Friable adheres to EPA/600/M4-082-20 or NYS ELAP 198.1.
- Bulk Sample Analysis by Polarized Light Microscopy (PLM) NOB adheres to NYS ELAP 198.6. This method does not remove vermiculite and may underestimate the level of asbestos present in a sample containing greater than 10% vermiculite.
- All inhomogeneous layers of the bulk samples were analyzed separately.
- Analytical results are sometimes based on the residue percentage(s) provided by the client along with the filters. Trace denotes asbestos detected at < 1%. Smiliarly, samples below quantitation limit (RL) are reported with a less than sign (<).
- Polarized Light Microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.
- Bulk Sample Analysis by Transmission Electron Microscopy (TEM) NOB adheres to NYS ELAP Method 198.4.
- Air Sample Analysis by Transmission Electron Microscopy (TEM) adheres to Method EPA CFR Part 763 Final Rule (AHERA).
- Air Sample Analysis by Transmission Electron Microscopy (TEM) Worksheets are available upon request.

ASBESTOS HANDLING LICENSE

CNS Environmental Corp.
208 Newtown Road, Plainview, NY, 11803

License Number: 76631
License Class: RESTRICTED
Date of Issue: 05/01/2023
Expiration Date: 05/31/2024
Duly Authorized Representative: Charles Powers

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

Re: Project Monitor Roof Sign Off
22 Oak Street
Bay Shore, NY

Dear Mr. Collins,

On June 13, 2024, Jet Environmental Testing performed a visual inspection of the roof at the above referenced site.

The asbestos roofing was removed from the building in accordance with New York State Department of Labor Industrial Code Rule 56. The roof was clean and free of asbestos materials. The logbook was signed after the visual inspection. No other asbestos materials remained.

Jet Environmental Testing would like to thank you for the opportunity to provide asbestos consulting services GC Enterprises of NY LLC on this project.

Please contact us if you should have any questions or comments concerning this report.

Yours truly,

Richard Maniscalco

Richard Maniscalco
Project Manager

- TRAFFIC FLOW DIRECTION

SITE MANAGEMENT NOTES:

1. LOCATION AND SIZES OF THE SITE MANAGEMENT FEATURES SHOWN ARE CONCEPTUAL. ACTUAL SIZE AND LOCATION TO BE BASED ON CONTRACTOR'S MEANS AND METHODS.
2. PERFORM WORK BETWEEN 8 AM AND 4 PM UNLESS AUTHORIZED BY NATIONAL GRID OR CONSTRUCTION MANAGER.
3. LIMIT NOISE TO 80 dBA AT PROJECT LIMIT. MEASURE NOISE LEVEL AT PROJECT LIMIT, AS NEEDED. PROVIDE NOISE BARRIER OR APPLY FOR ORDINANCE VARIANCE TO EXCEED NOISE LIMIT.
4. PROVIDE A MINIMUM OF TWO SANITATION FACILITIES INSIDE THE SUPPORT ZONE. CLEAN WEEKLY OR ACCORDING TO USE, IF MORE FREQUENT. IDENTIFY ONE FOR MALES AND ONE FOR FEMALES.
5. CONTRACTOR SUPPORT ZONE AND SITE PERSONNEL VEHICLE PARKING WILL BE LOCATED ON OU-1 NORTH.
6. INSTALL PHYSICAL CONTROLS TO ENSURE EQUIPMENT AND MATERIALS DO NOT FOUL OR RISK FALLING ONTO THE TRACKS, IN ACCORDANCE WITH THE GENERAL REQUIREMENTS OF LIRR.

DECONTAMINATION NOTES:

1. ALL PERSONNEL EXITING EXCLUSION ZONE MUST PASS THROUGH THE CONTAMINANT REDUCTION ZONE.
2. ALL VEHICLES EXITING THE EXCLUSION ZONE MUST PASS THROUGH THE CONTAMINANT REDUCTION ZONE. USE EQUIPMENT DECONTAMINATION PAD AS REQUIRED BY THE CONSTRUCTION MANAGER, AND NYSDEC. CONTROL OVER SPRAY.

PERIMETER FENCE NOTES:

1. INSTALL PERIMETER FENCE AROUND PROJECT LIMITS. UTILIZE EXISTING CONCRETE BARRIER WALLS AND FENCING WHERE AVAILABLE.
2. HEIGHT = 8 FEET MINIMUM.
3. MAINTAIN A MINIMUM OF ONE ACCESS GATE. PROVIDE TEMPORARY LIGHT AT ACCESS GATES, AND OTHER AREAS AS REQUIRED.
4. USE FABRIC PRIVACY SCREENING TO DEFLECT ODORS UP.
5. COVER FENCE WITH PRIVACY SCREEN (UV TREATED/STABILIZED FABRIC) TO FUNCTION AS A VISUAL AND WIND BARRIER.
6. INSTALL LOCKS ON ALL GATES. MAINTAIN KEYS ON SITE. PROVIDE NATIONAL GRID, CONSTRUCTION MANAGER, AND ENGINEER COPIES.
7. DESIGN FENCE POST EMBEDMENT DEPTH, SPACING, AND DIAMETER TO ACCOMMODATE PRIVACY SCREEN AND FENCE HEIGHT.

SECURITY NOTES:

1. INSTALL SECURITY MEASURES PRIOR TO START OF WORK.
2. PROVIDE SECURITY PERSONNEL 24 HOURS PER DAY, 7 DAYS PER WEEK.
3. ALL PERSONNEL MUST SIGN IN PRIOR TO ENTERING THE SITE, AT A MINIMUM, RECORD NAME, COMPANY, DATE, TIME IN, TIME OUT, AND REASON TO BE ON SITE.
4. LIMIT SITE ACCESS TO AUTHORIZED NATIONAL GRID, CONSTRUCTION MANAGER, STATE, COUNTY, CITY, ENGINEER, SUBCONTRACTOR, CONTRACTOR STAFF, AND OTHER PERSONNEL AUTHORIZED BY NATIONAL GRID.

Project No. 093180

Thomas Owens
Town of Islip Department of Public Works
401 Main Street
Islip, NY 11751

Re: Right of Way Permit 24-182 Closeout
22 Oak Street
Islip, New York

Dear Mr. Owens:

GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) has prepared this letter to assist in the closeout of Right-of-Way (ROW) Work Permit #24-182, which includes the sidewalk demolition and reconstruction of approximately 200 linear feet of sidewalk adjacent to 22 Oak Street. The ROW work was completed as a component of the New York State Department of Environmental Conservation (NYSDEC)-approved Interim Remedial Measure Work Plan (IRMWP) for Operable Unit No. 4 – 22 Oak Street at the Bay Shore/Brightwaters Former Manufactured Gas Plant (MGP) Site.

National Grid employed GEI as their construction manager, who had full-time staff on site to observe and document the performance of construction activities performed by the remedial contractor, Posillico, and their subcontractors. GEI provided Posillico *Construction Standard Detail 105 – Concrete Sidewalk* from the Town of Islip Department of Planning and Development for the reconstruction of the sidewalk and can certify that the sidewalk was installed in general accordance with the standard detail. The following photographs of the sidewalk installation were taken on December 13, 16, and 17, 2024.

Subject: FW: 22 Oak St Permit 24-182 Closure

Good morning, the attached has satisfied Engineering's requirement for third party certification. I have uploaded the attached document to building permit #199294.

Best wishes for a safe and happy New Year!

Regards,

Nancy Kelly
Associate Administrator
Town of Islip

Hello Anthony and Nancy,

Please see the attached letter for the closure of ROW Permit #24-182. Let me know if there is any additional information needed.

Happy New Year,
Tina Ezratty

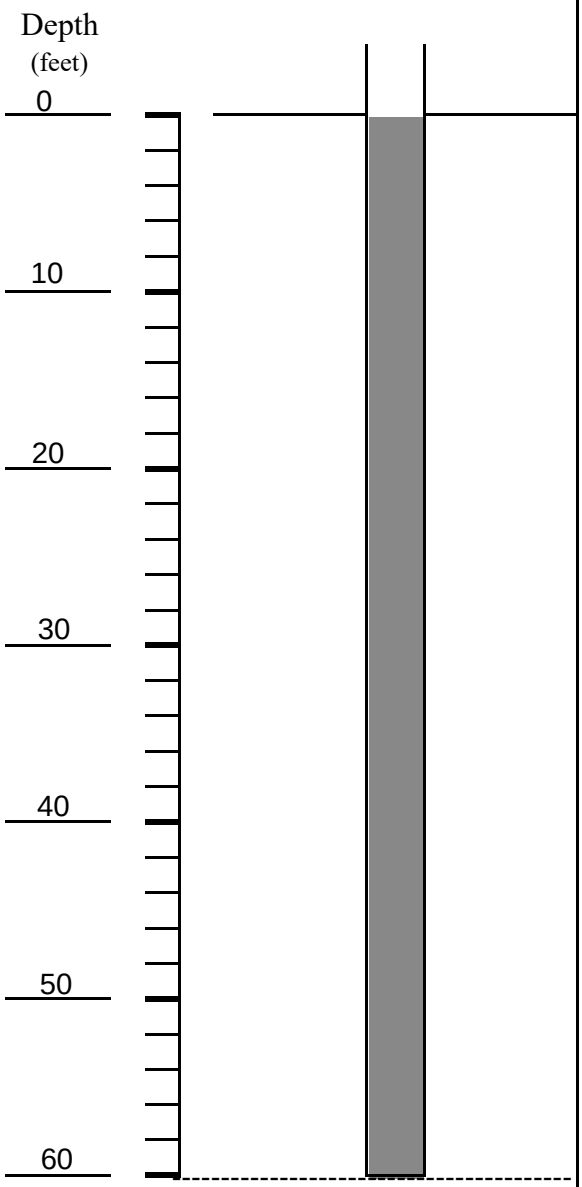
Site Location: 22 Oak St, Bayshore NY	Driller: Chris Migliore
Drilling Co.: Aquifer Drilling & Testing	Inspector:
	Date: 9-24-24

DECOMMISSIONING DATA
(Fill in all that apply)

OVERDRILLING	
Interval Drilled	NA
Drilling Method(s)	NA
Borehole Dia. (in.)	NA
Temporary Casing Installed? (y/n)	NA
Depth temporary casing installed	NA
Casing type/dia. (in.)	NA
Method of installing	NA
CASING PULLING	
Method employed	NA
Casing retrieved (feet)	NA
Casing type/dia. (in)	NA
CASING PERFORATING	
Equipment used	NA
Number of perforations/foot	NA
Size of perforations	NA
Interval perforated	NA
GROUTING	
Interval grouted (FBLS)	0-60
# of batches prepared	1
For each batch record:	
Quantity of water used (gal.)	15
Quantity of cement used (lbs.)	180
Cement type	Portland
Quantity of bentonite used (lbs.)	8
Quantity of calcium chloride used (lbs.)	0
Volume of grout prepared (gal.)	15
Volume of grout used (gal.)	15

WELL SCHEMATIC*



COMMENTS: Well abandoned from 0'-60' BG in place. Surface features removed and repaired with like materials.

* Sketch in all relevant decommissioning data, including: interval overdrilled, interval grouted, casing left in hole, well stickup, etc.
